> reality of the situation but y'all thought cb prisons were gonna be
> built...reality is finally settling in (see LA case).

I have been opposed to this legislation from the beginning for reasons
that I have stated in other threads. I see the potential for abuse, and
no clear ruling on what to do if a case of interference is being caused
by the LEGAL operation of a CB station. I can envision over zealous cops
hassling legal operators and making them spend time and money defending
their hobby, simply because they are interfering with cheap consumer
electronic junk. HR2346 specifically has language in there that exempts
hams from this sort of action, but there is no protection offered to
LEGAL CBers, and that bothers me.

If you need a 300 watt amplifer to talk to someone 2 miles away, I
suggest you sell the illegal amp and buy a decent antenna. Hell, I
can talk to someone 2 miles away transmitting into a dummy load for
crying out loud...

Actually Carl , things have changed a lot.
There no more arguments concerning antennas, radio's
amps, alternators, coax, most cb related things. Nope
there's only a few trolls , spewing hate & discontent
towards others on this group, stick around and
watch for a while, you'll be able to see who they
are.

Oh I'll agree with HP, I bought it in the
early 90's and it's split some three times since.
I voted against the merger and I have friends
that worked there, one who's father was there
from the beginning. I had RAL, good stock until
a couple of years ago unloaded it for Pfizer and
been happy with it's performance.
Well I'll keep watching it for a few weeks
and make a decision then. It will be cool because
I bought my HP for around $40.00 a share, if it
stays at this price I can take a lose for selling my
original investment, and get a better performing stock
for a few more years.

>JerryO wrote:
That doesn't mean that if a ham were running 3,000 watts and cussing up a blue streak that they *can't* necessarily get him on an obscenity, public(?) disorder, or disturbing the peace offense. BUT what they CAN'T get him for are equipment, frequency usage(operating AM in a CW subband-as if they were likely to know the difference), or violations of the rules governing the Amateur Service. Once the ham produces a license, the cop is to refer the matter to FCC who, then, is supposed to handle it--and I suppose they would with the complaint coming from LEOs. That issue seems to cause some friction amongst the readers, but that is the way I see it, and it is the way the law reads. Again, yes, the locals could get the ham on OTHER than simple interference if he were creating a deliberate disturbance as stated above, but they can't just come in and shut him down, take his equipment based on suspicion that he is causing Mrs. Sims' TV to go bonkers.<<

Thank you for clarifying just exactly what this law is about. The "friction" you alluded to comes only from those that do not understand the law in it's entirety and capacitance in relation to local governments. It is apparent you took the time to research exactly what this bill can and can not do.

1642. Hitchin a Ride.....

Message-ID: <67c9d341.0204190717.1bfe755d@posting.google.com>
Source record: 121507

A man decided that he was going to ride a 10-speed bike from Phoenix to Flagstaff.
He got as far as Black Canyon before the mountains just became too much and he could go no farther.

He stuck his thumb out, but after 3 hours hadn't gotten a single person to stop.
Finally, a guy in a Corvette pulled over and offered him a ride. Of course, the bike wouldn't fit in the car.
The owner of the Corvette found a piece of rope lying by the highway and tied it to his bumper.
He tied the other end to the bike and told the man that if he was going too fast, to honk the horn
on his bike and that he would slow down.

Everything went fine for the first 30 miles. Suddenly, another Corvette blew past them.
Not to be out done, the Corvette pulling the bike took off after the other. A short distance down the road,
the Corvettes, both going well over 120 MPH, blew through a speed trap.

The police officer noted the speeds from his radar gun and radioed to the other officer that he had two
Corvettes headed his way at over 120 MPH.

He then relayed, "...and you're not going to believe this... but there's guy on a 10 speed bike honking to pass!"

lol, Betty.

Geographically confused wrote:
>Your failure to acknowlege what the license stands for, is what escalates further division between Cbers and hams.<<

Wrong. Your problem is with other other radio service operators NOT looking at the license as a shrine or holy grail..not our problem, it's YOURS. The license means squat to those that choose not to persue it, and your kind has a problem with it.... that's what divides.

>It is evident by your choice of descriptive adjectives, to what degree your prejudice festers.<<

LMAO! You now interpret and associate the use of a "descriptive" word with a bias> Which term confused, disoriented, and further escalated your ability to comprehend?
You are the one that claimed you were above and better than others because of your license.......deal with your biases instead of trying to foster them on others..

>A ham license is something you have to expend some effort obtaining, so it does hold some intrinsic value, despite what your bias is telling you.<<

Intrinisic value? (Chuckle)
What I find more entertaining is the mere thought that you continue to hold the license as some kind of accomplishment...maybe I'm giving you too much credit, it probably WAS an incredible feat for you. In that case, congratulations.

>Despite what you may think, the license had to be worked for to get<<

This is purely your opinion. What is "work" for you is kid;s play to some of us, CW included, so no, there is no real effort in obtaining a license, especially at entry level.....so you see, it's not what "I" think, it's merely you not being able to see any angle but your own.

>"Work" is a relative term. It is still an accurate description of what you have to do to obtain the license. It might be easy work, or hard work depending on the person. But it is still work, which is still more than you have to do to operate a CB, which is buy on at your local "Radios R Us"<<

Really stepped in this time with your comment about being "better" than everyone else, didn't you? Most do not consider "work" relative, such as you are attempting to with the back-pedal.
Work is usually associated with a certain amount of effort/and or exertion put forth to accomplish a given task....again..the gateway to

being licensed is not considered much of an accomplishment or effort to most, but, once again, congratulations on accomplishing something that is not considered by most to be the challenge that it apparently was for you.
At what level of licensing did you consider the NON-relative term "work" to come into play?

>(Even though the tests have gotten pitifully easier in recent years),<<

Here you contradict youself. You claim these tests are quite an accomplishment for you, then you turn around and lament how "pitifully easier" the tests have become...lemme guess...since YOU got yours, correct?

>and is supposed to demonstrate that the license holder at least understands the basics of radio operation and theory. THAT is what it stands for.<<

Most long time cb ops, and certainly the ones that frequent here are familiar with BASIC radio operation and theory (some,....more), sans license.

>That may be true, but it doesn't explain why a person that has the knowlege to gain a ham license, would not do so, just to say "I did it" if for no other reason.<<

Explain to who? Apparently, you feel you are entitled to an explanation of why everyone who is the slightest bit interested in radio comms doesn't get a license. I'll tell you again.....most don't hold the thing in the deity-like position that you do.

>And even if you don't feel that this is a valid claim, it is still one better than what a CBer has, which is NOTHING.<<

Ha ha! You assume way too much. You have no clue if a cber has a license or not.

>Since the CB license was abolished by the FCC some 20 years ago, I can say with some certainty that the CBer has no license.<<

Reading that line today I am certain you can see how you apparently neglected to think about what you were going to say prior to actually posting it.

>Whether he does or doesn't,<<

Wait a sec-----you just said,
"I can say with some certainty that the CBer has no license" and now you say "whether he does or doesn't?"
In reality, you said nothing with certainty.

it fails to make you "better" somehow, because you hold a license....I'm still laughing at that....that mindset is the epitome of the problem between cbers and hammies, and you shrug your shoulders and

point fingers to others when your actions based on your mistaken thoughts and interpretations are flawed.

>Like it or not, hams have something that you don't.>>

Not at all. I never looked at it that way at all. Only your type seems preoccupied with "like or dislike" of a license. It doesn't mean squat here, and damn sure doesn't make you any better than another,,,,that comment speaks for itself concerning your disposition.

>The fact that you react so predictably negative<<

Where did I react negatively? Quote it.
The problem lays only with your dissatisfaction in your ability to make others think that it actually carried the weight you attribute it.

>fits the classic mold of someone who cannot achieve so they downplay the significance of that achievement.<<

Of course, your insults couldnt have been far behind. All your type are so predictable. You can't carry on a decent conversation without upsetting yourselves and resorting to personal insults. We understand your position,,,you cemented it with the comments about you being better than everyone else.

>the fact remains that it does offer you some protection.<<

Yes, to harmless interference.

>What is "harmless interference" anyway?<<

Hmmm...yes, I do see how the minimal testing requirements were a chore for you.

>If someone is being interfered with, in their eyes, it's harmful. "Harmless interference" is an oxymoron.<<

Incorrect, but I long tired of educating you.

>The difference is that a hammie-gone-bad will be popped by the FCC, not the local-yokels, and will likely stand to face harsher penalties. If a CBer causes interference and uses occasional profanity, it could be cause for a local cop to interviene and the local courts to settle the matter. The defendant will most likely be cited for disturbing the peace, or some other such public obscenity law, and not a violation of radio rules.<<

I notice you also conveniently snipped the part about you claiming that the cops wlll be turned away, where I replied below with the 'BS" statement. Even your attempts at snipping to make it so that my comments appear intentionally out of context are a failure, but they magnify your agenda.

Ha! That's BS! There exist multitudes of "hammies gone bad." If you can't find them on your own, many of us can point you to the proper

freqs where you can witness this yourself. I can even point you to a group of extremely frustrated hammies that have HUNDREDS of hours on tape of "hammies-gone-bad" that have reported it to the FCC repeatedly with the classic canned reply.

>The fact that you, a non-ham, spends so much time and effort documenting "bad hams"<<

What in the world ever gave you that idea? Your innuendos, as they always have, fall flat. Once again, you attempt to reduce a debate about a license to a personal level with deliberate and incorrect info. It's not us that give a damn about the hammies or the licenses,,,it's your few that get a hard-on for us when we refuse to acknowledge your self-elevated status by way of licensure. If it wasn't for you few insecure beings, the license would hardly come into conversation.

>just illustrates further your inner desire to justify your failure to obtain a ham license<<

Only I never failed. Come again.

Thank God 2346 allows local charges to be brought. You few malcontent hammies reduntantly keep saying that a hammie is protected, but the Feds have just shown otherwise with the LA case..not only did they back off when they were approached for protection by a guilty-as-sin-hammie that was facing local/state charges, they replied with what is more than likely a precedent-setting statement..they will NOT get involved when charges are brought. An exception to this rule MAY be a simple interferece complaint. You wanted enforcement, it's clean-up time in your own yard first, then, IF they can get the hammie back yard to quit smelling like a cesspool, then and only then, may cb scofflaws get some attention. At least the feds recognize what service is in big doo-doo and needs attention quickly.

>You seem to have it backwards.<<

Actually, it's you that is full of mistake-laden statements, outright lies, deliberate fallacies, and personal attacks. You've been that way ever since I can remember.

>If the ham bands are a cesspool, then 11 meters is the state landfill.

Problems staying on topic again? Always looking for the offensive attack, a demonstrated inability.

>You have no place talking about the actions of a statistically small percentage of scofflaw hams, when 11 meters is rampant with radio anarchists, who need the attention of some law enforcement agency.<<

I most certainly do have the right. You not agreeing with that right means squat to me.
Twasn't I that brought up hammie radio and licensing, twas you.

>HR2346 was written specifically with CBers in mind.
You keep trying to stretch this into extreme cases. If a ham has truly gone "twistie", and is running wild on some ham band and creating a public nuisance, he may be cited for the public nuisance by the locals, but only the FCC can cite him for radio rule infractions.<<

You need to get one of the more educated hammies among us to enlighten you concerning this law since you have aptly demonstrated you haven't a clue.

>CBers can have their whole station confiscated if it it deemed to be "contraband", by the locals, and that is the big difference. A difference that you can't seem to grasp.
Dave
"Sandbagger"<<

How can I fail to grasp something that was never mentioned until now? Get a grip and get a hammie to enlighten and educate you on these matters.

1644. OT: The new samurai.....

Newsgroup: rec.radio.cb
Date: 2002-04-19 15:26:34 UTC
From: b_swollocks@hotmail.com
Message-ID: <67c9d341.0204190726.54dd0dae@posting.google.com>
Source record: 121508

Way back in the time of the samurai, there was a powerful emperor.
This emperor needed a new head samurai. So, he sent out a message to
everybody he knew for them to send a message to who they knew, and so
forth.

A year passes, and only three people show up: a Japanese samurai, a
Chinese samurai, and a Jewish samurai. The emperor asks the Japanese
samurai to come in and demonstrate why he should be head samurai.

The Japanese samurai opens up a matchbox, and out pops a little fly.
WHOOOOOSH. The fly drops dead on the ground in 2 pieces!
The emperor says, "That is very impressive!"

Then the emperor asks the Chinese samurai to come in and demonstrate
why he should be head samurai. The Chinese samurai opens up a matchbox
and out pops a little fly. WHOOOOOOOSH. WOOOOOOOSH.
The fly drops dead on the ground in 4 pieces!
The emperor says, "That is really impressive!"

Then the emperor asks the Jewish samurai to come in and demonstrate
why he should be head samurai.

The Jewish samurai thinks, "If it works for the other two..." So the
Jewish samurai walks in, opens a matchbox,and out pops a little fly.
WHOOOOOOOOOOOOOOOOOOOOOSSSSHHHH!
A gust of wind fills the room, but the fly is still buzzing around.
The emperor says in disappointment, "Why is the fly not dead?"

And the Jewish samurai replies - "Look closer, that fly has been
circumcised!"

lol, Betty.

I can't believe that you think us ham's are a causing a disgrace to the "citizens" band by posting an ad selling something. Do you want to see disgrace? Take a listen at the 10 meter band on a HAM radio and listen to all the "hash and trash" that's being transmitted illegaly by the "citizens band" Lets get even simpler. I can go a whole day, or a whole month without hearing one swear word on my local repeater, or one slander towards anybody. But, oh no, god forbid i say "damn" on the citizens band! FCC should make it so everybody has to have a license to use CB's. 73's!

I wouldn't say it has anything more to do with ham radio than any other
thing. I see people
dressed this way at the "Sar'dy" swap lot. I used to see this guy with a big
old CB whip on
his station wagon, a gurney in the back and an oxygen bottle. He used to
run around listening on his scanner for wrecks and show up pretending to be
an ambulance. He even had red lights in the grille, and a multitude of
antennas that didn't seem to go to anything. The authorities caught onto him
pretty quick and made him quit that. I used to know about
a guy in a white Ford ex-cop car that used to tell people on the CB to slow
down at a cer-
tain intersection or "he'd" give them a ticket. He even had a "Smokey" bear
hat he bought
at an army surplus store. Heck, most of us knew he was no cop, so we'd mock
him when
we passed him sitting "clocking" people. I had a really fast Chevy back in
those days, so I
baited him into chasing me a couple times--he'd even stick a magnetic blue
light on the roof
like you see TV cops do. The guys who knew him just didn't pay him any
attention; we already knew his elevator stopped a few floors shy of the top.
Anyway, the NCHP got wind of his antics and took the old feller to jail.

Man, there's kooks out there blended in the population. Only when we can
associate them
with some hobby or interest, particularly if we are trying to discredit it,
do they seem to stand out.

No, its not ground wave, and its not skip.
Skip is a term that doesn't describe whats happening.

I know that a good portion of the ops did (do?) send QSL cards that
confirm the reception of, rather than the QSO with, other stations. My
QSL cards were actually printed as such by, of all folks, a dedicated
ham radio QSL printer. These were similar in appearance to the SWL
QSLs that you might see in Pop'Comm or Monitoring Times. This does NOT
work on the "freeband" though.

Oh brother.

I'll leave the relative inaccuracies of that statement for others to
point out. My concern is the use of the phrase "10 METER". This is NOT
a 10 METER amp. This is a CB AMP desperately trying to disguise itself
as something it is not.

1660. 80-Meter Doublet for 11-Meters?

Newsgroup: rec.radio.cb
Date: 2002-04-19 18:53:16 UTC
From: wa2si@arrl.net
Message-ID: <b7d1465c.0204191053.2b15a52d@posting.google.com>
Source record: 121525

Here's an interesting question. I'm preparing to put up my 80-meter doublet since the weather has taken a turn for the better up here. For those of you who may not be familiar with an 80-meter doublet, it's just a 120' dipole that is used in conjunction with a tuner to present an acceptable load (read low SWR) to the transmitter.

Well, rather than put up a separate dedicated CB antenna, I could just feed the output to one of the input SO-239's on the tuner and use all that wire swingin' in the wind. Any opinions? Thanks. :-)

The keyclown could offset some of the costs of such a journey by writing a book on how to be a keyclown, such as where to get such things as bicycle horns, bells, squeaky red rubber noses, turbine whistles, frilled collars, makeup, absurdly undersized bowler hats, etc.

Some of the key clowns in my area are probably experts on this, so I should at this point defer to their judgment on such matters.

Jerry, Local govt's can pass ordinances not laws, these will then enable there town to enforce the FCC Laws re: CB Radio they cannot make there own Laws they only now have the power to enforce Certain FCC laws not make there own. They only now have the ability to enforce these types of FCC Laws once there respective towns says they can. THEY CAN ONLY ENFORCE CERTAIN FCC RULES! PERIOD!

"The intent of this provision is to allow State and local governments to
pass
ordinances that will mimic Federal law and allow for its enforcement."

AUTHORIZING ENFORCEMENT OF REGULATIONS ON CITIZENS BAND RADIO EQUIPMENT

to authorize the enforcement by State and local governments of certain
Federal Communications Commission regulations
regarding use of citizens band radio equipment

Be it enacted by the Senate and House of Representatives of the United
States of America in Congress assembled,

SECTION 1. ENFORCEMENT OF REGULATIONS REGARDING CITIZENS BAND RADIO
EQUIPMENT.

1) Except as provided in paragraph (2), a State or local government may
enact a statute or ordinance that prohibits a violation of the following
regulations of the Commission under this section:

A) A regulation that prohibits a use of citizens band radio equipment not authorized by the Commission.

4)(A) In addition to any other remedy authorized by law, a person affected by the decision of a State or local government enforcing a statute or ordinance under paragraph (1) may submit to the Commission an appeal of the decision on the grounds that the State or local government, as the case may be, enacted a statute or ordinance outside the authority provided in this subsection.

D) If the Commission determines under subparagraph (C) that a State or local government has acted outside its authority in enforcing a statute or ordinance, the Commission shall preempt the decision enforcing the statute or ordinance.

Clear something up for me please. If my local city passes an ordinance that prevents anybody from building a carport, and then my neighbor builds one, the city can fine him, attach his property, eventually take ownership of the property, and perhaps even tear it all down by condemnation. Conceivably the owner could be placed in jail if he became overly argumenative. How does this differ from a law? Ordinances have the power of law.

>Train
It is too heavy? It mounts on your mobile and it is made out of aluminum, How
can it not be wide enough? It is wider, and more robust than all other similiar
mounts out there. Why would you need a underside washer the mount gets bolted
directly to your roof from underneath therefore you need to get a ground what
is the washer for? It is too tall? How tall is it ? 1-1/2 inches high. You
forget to mention some other things such as If it sucks so bad why did Xforce
copy them ? BTW, the best of all It is a true 50 ohm mount. Name another that
is, besides a copy of the davemade.

For multiple bounce, it is the same as a rock skipping on
water. I see no problem with the term.

It can be more descriptive than DX - which could be by ground
wave or tropo ducting.

Depends a bit on where it resonates on 80, if it is up in the phone band it should load gangbusterly but the closer you get to even harmonics the more likely the tuner is to object strenuously and with great smoke and emotional arcing. But you will run legal power anyway so there shouldn't be a problem beyond 'Oh Shit'.

It will endfire, the strongest lobes will be off the tips rather than broadside. Any antenna beyond 3/4 wave does so and at 7/4 or so it should do so vigorously. And there will be substantial gain in the favored directions.

Now if you really get serious, with a couple more supports you could turn it into a bi-directional rhombic and with the addition of a 600 ohm terminating resistor make it unidirectional. You might even get it done soon enough to have a major funny ha-ha before the spots fall out.

Go for it man. That's why it is *amateur* radio. Self-education now and again means finding out what doesn't work for doodly.

Yes G Man, you have to spell it out more slowly because one of us doesn't get it, and I suspect it isn't me. Let's review. You stated flatly that local governments can pass ordinances, but that ordinances are not laws. This is patently untrue. Forget radio for a moment. You were criticizing someone because of your interpretation of what a 'law' is as oposed to an 'ordinance'. Understand that an ordinance IS a law. Now, let's look at radio. HR 2346 permitted states to enact legislation which would permit local governments to enforce existing federal rules as they apply to CB. This means that your home town can not inforce the federal rules under HR 2346 unless the state in which you are located has already passed enabling legislation permitting such. Does this clear it up for you?

This ain't no MFJ tuner. It's a Sherman tank with vernier dials. On 80, I'll not run more'n 85 watts or so. On 11-meters, I'll hammer the old Palstar with a whopping 12 watts. I might even kick in the speech processor from time to time. :-)

Just remember the ends of any antenna are voltage nodes and at somewhere near 1500-2500 ohms the joltage can get pretty mean at low power. Gutters aren't likely to corona but any passing or pissing dogs and kids can get a real surprise.

I got Wire Antenna Classics Vol 1 from the American Registry of Rotten Lids for re-upping. Some are classic indeed but it is interesting bathroom reading for sure.

Take your word on Aaron. Having long since killfiled him I honestly just try to ignore the man.

Rhombics are 60 and 120 diamonds on the order of two wavelengths on a leg which is about what you have. They use that endfire effect to become a real firehose in the chosen direction.

Antennas are fun but at some point you will learn words that would be new to a cavalry sarge.

> governments can pass ordinances, but that ordinances are not laws.

With regards to CB enforcement they cannot create new Laws they must enforce
existing FCC Laws. So towns are not creating new laws governing cb radio

> This is
> patently untrue. Forget radio for a moment. You were criticizing someone
because
> of your interpretation of what a 'law' is as oposed to an 'ordinance'.
> Understand that an ordinance IS a law.

No Gary, what you said is patently untrue this is what Dave said :

"Dave Hall" <nojunkmail_n3cvj@worldlynx.net> wrote in message

>I did, and there are some cases where the towns can make specific laws
> (Like limiting antennas), to address potential interference problems.

> In most cases though, it is not FCC rules that are being applied here,
> but local laws (such as disturbing the peace) that are being applied to
> certain types of interference.

Towns cannot make specific laws regarding CB Radio they must use existing
FCC Law is this a problem for you to understand? they must enforce existing
FCC laws they cannot rewrite new laws in regards to CB enforcement. they
can creat an ordinance/statute that will allow them to carry out current FCC
laws.

> Now, let's look at radio. HR 2346

Yes lets look at it it specifically states: Not the wording "Of Certain" FCC
regulations!

To authorize the enforcement by State and local governments of certain
Federal Communications Commission regulations regarding use of citizens band
radio equipment. `

(f)(1) Except as provided in paragraph (2), a State or local government may enact a statute or ordinance that prohibits a violation of the following regulations of the
Commission under this section:

(D) If the Commission determines under subparagraph (C) that a State or local government agency has acted outside its authority in enforcing a statute or ordinance, the Commission shall preempt the decision enforcing the statute or ordinance.

>. This means that your home town can not inforce the federal rules under HR 2346 unless the state in which
> you are located has already passed enabling legislation permitting such. Does this clear it up for you?

No it doesnt Gary, It says nothing of the sort. No where does it make that statement the state does not have to do anything. It is up to
each governemt local or otherwise. How can you clear up something you are not sure of yourself.

Twist, it may happen, but your attourney can appeal stating the local court has no jurisdiction - and that has happened. The key here is what you are saying. If one got caught in that mess, would they really want to force the issue and end up in Federal court, or prosecuted by the FCC? I'll admit I'm guessing, but I would tend to believe the ham could force the issue - and would probably be stupid in doing so. Pay the fine, do some community service if need be, but if it is that bad, the ham would likely not want to force the issue. Interference issues (without foul language), have been sucessfully argued that the local court has no jurisdiction. In any case, you yourself have pointed out (and I totally agree) that the best bet is to work with neighbors who have a problem. It is a lot easier to work out early, regardless if you are a ham or a CBer, than to slug it out in court (even if you win, it costs money). My guess is that it depends upon the charges.

You missed my point entirely, and we seem to be talking in circles.
1. An ordinance is a law, with or without respect to radio.

Period

But if you want me to go on ......

2. No state can create a law more strict than the FCC rules, but it can create ordinances or permit local city/county governments to create ordinances which seek to enforce the FCC rules.
3. Depending upon the individual state's constitutions, a local government may or may not be allowed to create a local ordinance which enforces an otherwise strictly federal jurisdiction.
4. A local jurisdiction is certainly permitted to create ordinances which attempt to enforce local standards of decency.

Hence, if a guy is operating at 4 watts, he still might be getting into the neighbor's electronics. Even if he is operating legally under FCC rule, he might be cussing up a blue streak, offending the lady next door, and violate a local rule about public nuisances. There might not be a need to attempt to enforce Part 95 if it is easier to enforce a local law about public displays of vulgarity.

It would be interesting if everyone on this newsgroup would contact their state's attorney general office and get a ruling upon the legality of enforcing the rules under HR2346. I susp[ect it would vary wildly from state to state.

Bert, my best antenna was a non-resonant chunk of 8 gauge wire several hundred feet long. I simply loaded the thing on everything from 160 through 15 meters (the old receiver was quite insensitive on 10 so I didn't use 10 meters). 25 watts into the thing was good for the lower 48 on 160. It got better the higher in frequency I went. On 80 meters, I broke into a CW net (I wasn't expecting them to hear me but ...) in the standby position on a Johnson Ranger I. No drive to the pa. I had to be running milliwatts. I hadn't even tuned the thing (although it was 'reasonably' close, I suppose, as I had been operating within a couple of hundred KHz from their point). The ground was a thing of beauty - several 8 foot ground rods at various distances from the house plus a connection to the hot water heating system in the house. A Rube Goldberg, for sure, but it worked - very well. Go for it!

47USC414 (Chapter 5, as applies to all radio services):

"Nothing in this chapter contained shall in any way abridge or alter
the remedies now existing at common law or by statute, but the
provisions of this chapter are in addition to such remedies."

There are many places in both the USC and CFR where it says, in
effect, the states may make any laws they want regarding intrastate
communication provided they do not contradict federal laws. Interstate
is a different story.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. ENFORCEMENT OF REGULATIONS REGARDING CITIZENS BAND RADIO EQUIPMENT.
To authorize the enforcement by State and local governments of certain Federal Communications Commission regulations regarding use of citizens band radio equipment.

To authorize the enforcement by State and local governments of certain Federal Communications Commission regulations regarding use of citizens band radio equipment.

Section 302 of the Communications Act of 1934 (47 U.S.C. 302a) is amended by adding at the end the following:

`(f)(1) Except as provided in paragraph (2), a State or local government may enact a statute or ordinance that prohibits a violation of the following regulations of the Commission under this section:

`(A) A regulation that prohibits a use of citizens band radio equipment not authorized by the Commission.

`(B) A regulation that prohibits the unauthorized operation of citizens band radio equipment on a frequency between 24 MHz and 35 MHz.
(D) If the Commission determines under subparagraph (C) that a State or local government has acted outside its authority in enforcing a statute or ordinance, the Commission shall preempt the decision enforcing the statute or ordinance.

(4)(A) In addition to any other remedy authorized by law, a person affected by the decision of a State or local government enforcing a statute or ordinance under paragraph (1) may submit to the Commission an appeal of the decision on the grounds that the State or local government, as the case may be, enacted a statute or ordinance outside the authority provided in this subsection.

Then why did they need to pass hr 2346 to accomplish this if they can
already do so? No such thing in
http://www4.law.cornell.edu/uscode/47/index.html
This was specifically added 47USC302a. Why would they need to add it again
if italready was in there?

SECTION 1. STATE AND LOCAL ENFORCEMENT OF FEDERAL COMMUNICATIONS COMMISSION
REGULATIONS ON USE OF CITIZENS BAND RADIO EQUIPMENT.

Section 302 of the Communications Act of 1934 (47 U.S.C. 302a) is amended
by adding at the end the following:

`(f)(1) Except as provided in paragraph (2), a State or local government
may enact a statute or ordinance that prohibits a violation of the following
regulations of the Commission under this section:

`(A) A regulation that prohibits a use of citizens band radio equipment
not authorized by the Commission.

`(B) A regulation that prohibits the unauthorized operation of citizens
band radio equipment on a frequency between 24 MHz and 35 MHz.

`(2) A station that is licensed by the Commission pursuant to section 301
in any radio service for the operation at issue shall not be subject to
action by a State or local government under this subsection. A State or
local government statute or ordinance enacted for purposes of this
subsection shall identify the exemption available under this paragraph.

`(3) The Commission shall, to the extent practicable, provide technical
guidance to State and local governments regarding the detection and
determination of violations of the regulations specified in paragraph (1).

`(4)(A) In addition to any other remedy authorized by law, a person
affected by the decision of a State or local government agency enforcing a

statute or ordinance under paragraph (1) may submit to the Commission an appeal of the decision on the grounds that the State or local government, as the case may be, enacted a statute or ordinance outside the authority provided in this subsection.

`(B) A person shall submit an appeal on a decision of a State or local government agency to the Commission under this paragraph, if at all, not later than 30 days after the date on which the decision by the State or local government agency becomes final, but prior to seeking judicial review of such decision.

`(C) The Commission shall make a determination on an appeal submitted under subparagraph (B) not later than 180 days after its submittal.

`(D) If the Commission determines under subparagraph (C) that a State or local government agency has acted outside its authority in enforcing a statute or ordinance, the Commission shall preempt the decision enforcing the statute or ordinance.

`(5) The enforcement of statute or ordinance that prohibits a violation of a regulation by a State or local government under paragraph (1) in a particular case shall not preclude the Commission from enforcing the regulation in that case concurrently.

`(6) Nothing in this subsection shall be construed to diminish or otherwise affect the jurisdiction of the Commission under this section over devices capable of interfering with radio communications.

`(7) The enforcement of a statute or ordinance by a State or local government under paragraph (1) with regard to citizens band radio equipment on board a `commercial motor vehicle', as defined in section 31101 of title 49, United States Code, shall require probable cause to find that the commercial motor vehicle or the individual operating the vehicle is in violation of the regulations described in paragraph (1).'.

I think the Indiana Cber may have a case for an appeal hear, what training did the police in his town recieve? What statute or ordinance did his state or town pass before they busted him? as it says the bill is totally voluntary for state and local govts.

H.R. 2346 would allow state and local governments to enforce certain Federal Communications Commission (FCC) regulations regarding the use of citizens band (CB) radio equipment. The bill also would require the FCC to provide technical assistance to state and local governments on how to detect unauthorized CB use. In addition, H.R. 2346 would establish an appeals process for CB operators who claim that local law enforcement officials acted outside of the authority provided by this bill.

CBO estimates that implementing H.R. 2346 would not have a significant impact on the federal budget. Because the bill would not affect direct spending or receipts, pay-as-you-go procedures would not apply. H.R. 2346 contains no intergovernmental or private-sector mandates as defined in the Unfunded Mandates Reform Act. Although the bill would expand state and local government authority to enforce certain FCC regulations, the establishment of such enforcement mechanisms is entirely voluntary.

==========
H.R. 2346 would allow state and local governments to enforce certain Federal Communications Commission (FCC) regulations regarding the use of citizens band (CB) radio equipment. The bill also would require the FCC to provide technical assistance to state and local governments on how to detect unauthorized CB use. In addition, H.R. 2346 would establish an appeals process for CB operators who claim that local law enforcement officials acted outside of the authority provided by this bill.

CBO estimates that implementing H.R. 2346 would not have a significant impact on the federal budget. Because the bill would not affect direct spending or receipts, pay-as-you-go procedures would not apply. H.R. 2346 contains no intergovernmental or private-sector mandates as defined in the Unfunded Mandates Reform Act. Although the bill would expand state and local government authority to enforce certain FCC regulations, the establishment of such enforcement mechanisms is entirely voluntary.

==========
CB Radio Service is governed by Subpart D of Part 95 of the Commission's Rules (47 C.F.R. 95.401 et seq.).

This Bill delegates the enforcement authority nothing more

PURPOSE AND SUMMARY
The purpose of H.R. 2346 is to improve enforcement of Federal Communications Commission's (FCC) rules governing Citizens Band (CB) Radio Service. Today, a small number of people are using their CB radios in a manner not permitted under the FCC rules. Such behavior is causing unnecessary and harmful interference for other people using radio devices operating in nearby

spectrum bands, including consumer telephones and televisions. The bill would delegate authority to State and local governments to enact and enforce a statute or ordinance requiring users of CB radios to comply with FCC rules, thus providing an additional enforcement compliance mechanism.

Empowering State and local governments to enact and enforce statutes and ordinances requiring compliance with FCC rules on CB radios will only improve compliance with FCC rules and prevent needless interference caused by those who feel they are not obligated to follow FCC rules. State and local government action will complement and should not be a substitute for the FCC enforcing its rules.

==========
==========

BETTER Be Careful Of this One!!!!!!!!!!!!!!!!!!!!!! Imagine a cop being allowed to do this since he will now be a field agent.

"The FCC, including its field agents, have the right pursuant to section 303(n) of the Communications Act to conduct inspections of radio installations without a search warrant. "

Bert,
It should work okay. Not the 'best' antenna in
the world, but you've probably used worse. With your
100x190 lot, I'd have to try a loop. One about 580 ft
long should work good on 160 and up. With the way you're
feeding the antenna, length won't be ~that~ important.
The bigger the better, of course.
Have fun...
'Doc

Jim, there is a differnce. Yes there are a few groups of people that don't qualify as militia. For example, active or reserve military/national guard. Though they are not *required", they still can take part in it.

Reminds me of a story my dad told me back when he got drafted for 'Nam. He told me of a man with one leg on crutches that was there. He said that man raised hell over not being accepted for draft.

<snip>
>This Bill delegates the enforcement authority nothing more

Exactly. The federal government cannot enforce laws outside of it's juristiction, and neither can the states (or counties, or cities, etc.) HR2346 permits local enforcement of FCC regulations VIA the passing and enforcement of laws identical to that of the FCC, but at the state and local level.

The point I was trying to make was that while the FCC prohibits certain acts, the local and state govts can make laws that prohibit acts not covered by the FCC, provided they do not contradict federal regs. Causing a nuisance and/or harrassment are not covered by FCC regs unless the violation crosses state boundries. Then it becomes a federal issue, and there are already laws in place to deal with that. But the states are allowed to pass their own laws pertaining to intrastate communication.

I hope you see, for example, that if a state wanted to pass a law prohibiting operating a CB radio while operating a motor vehicle, they have every right to do so -- the FCC doesn't guarantee a person's right to drive and fart into the mic at the same time. Nor has it passed any regulation stating that a neighborhood must tolerate gobs of interference from some dumb schmuck with a linear.

Like any nuisance situation, most interference problems can be easily resolved by a little communication and cooperation. The law is usually reserved for those situations where someone is being a real ass. In the case in Indiana, it looks like that's exactly what happened.

....we bring you another exciting episode of

"CB JAIL"!!!!!!

MUSIC: THEME FROM DRAGNET

THE SCENE: Inside MOPARHOLIC'S CELL. MOPAR and RANDY lay on separate bunks smoking Camel unfiltereds and staring at cracked plaster on the ceiling. A pinup photo of an XFORCE 8 PILL droops from the wall.

RANDY: Play another game of cards?

MOPAR: No thanks. You cheat.

RANDY: Yeah well you cheat too.

MOPAR: Hey, Did I say I was honest? I'm a keyclown.

RANDY: So what are you in for?

MOPAR: Amp. You?

RANDY: Amp.

MOPAR: Yeah but I'm innocent.

RANDY: Me too.

BOTH LAUGH UPROARIOUSLY.

Suddenly - A LOUD RYTHMIC THUMPING reverbrates from somewhere in the jailhouse.

MOPAR: What's that noise?

RANDY: Guy in the cooler. Poor bastard's in a straightjacket. All he can do is bang his head against the wall, day in, day out.

MOPAR: Anybody know who he is?

RANDY: Nope. But they say he's crazy as a loon.

INSIDE THE COOLER: TWISTEDHED -- trussed up in a STRAIGHTJACKET on the floor of a bare cell, whacks his head against the padded wall. THUMP!

THUMP! THUMP!

TWISTEDHED: (mumbling) ...college students....picking my mushrooms...must be punished...like dogs...saucermen coming to release me...soon...Leland's fault...all Leland's fault....

MUSIC STING.

Tune in next time...for another episode of....

"CB JAIL!!!"

What do they need a warrant for? Just listen to the damn radio! Better
yet, imagine a cop sitting in his car waiting to pay for his chicken
chunks at "the first window". He sees a Suburban with monster whip,
coil and curb-feelers, and every time the driver puts the microphone
in front of his face the windshield wipers start working, the radio
flares up with audio hash, and the golden arches begin to glow. If the
cop had been properly instructed by the FCC (as per HR2346) that these
are some of the indications of illegal CB operation, don't you think
that would be probable cause?

Ok I think I see where the discrepancy is.
If those previously posted parts of the FCC's rules are
verbatum then I would say the problem is the word (or).
The State does not need to allow the city to enact an
ordinance in this case.
The city can take it upon itself to do so without permision
from the state.
There maybe a State law somewhere that precludes a city from
doing this on it's own but the FCC isn't concerned about
that.
Maybe that helped?

Hello Everybody, I'm Marcello from italy, i could if is possible an information about 2 antennas.
The antennas are the ANTRON 99 and the IMAX 2000. I saw on internet that are good antennas, the second is better than the first!
My question is the db gaind that many web site write about 9 db for the first and 11 for the second is correct?

And......this two antennas as better than a simple 5/8 made in alluminium like SPectrum 1600 Mantova or SIRIO 827?

I have a Spit Gain 5/8 with 24 radial, you advise to change antenna for the Antron 99 or IMAX 200, or I must stay with my actual antenna?
Thank to all want answer me.

I'm talking about vertical antenna for 27 Mhz.

Excuse for the Enghlish error!

Marcello

he's in birmingham..... no he's in london..... he's on his
computer..... no he's at an internet cafe.

rotfpmpl. you pair of dumbasses are tracking isp computers. i am still
in the same place using the same isp.
you can only trace a computer while it is connected to the internet
and i disconnected within seconds of sending that message.
did you two goofballs actually think that a computer will respond to
an echo request even when not connected?
i thought that georgie porgie would realize what he had traced. i
guess that he just looks at the map as the pretty pictures seem easier
to understand than all that writing.

what a double act the terrible twins..... dumbass and jackass.

before you try to ping this computer you should check the ip number it
has a habit of changing every time i connect.
better hurry as you have around 10 seconds from when i hit that send
button. after that you will be tracing either the isp or the next
person to be given that ip number.

Jock McVoobner.

Certainly mounting the 102 so it was not in "free space" will have a negative impact on the performance, you are certainly correct. However, a 102 with optimum mounting will "out perform" that Firestick. The key word here is "optimum"... as you know mounting an antenna of that size and mass at the periphery of a vehicle can be tough. For your application, the Firestick seems like the better choice...

> The FCC may have to look into this.

You want the FCC to look into an intentional jamming complaint on CB!? Good luck! Those overpaid lazy bastards won't care. Please let us know if you can actually get them off their fat duffs to investigate.

On the other hand, you could try to track down the person and utilize that information for your own personal agenda... it's real easy to track people down with a radio that has a needle meter instead of a meter with lights.

Its not the same as a rock "skipping across water. The "bounce" off
the ground yes, but it doesn't "bounce" or "skip" off the ionosphere.
An HF signal transmitted from the earth may travel some way through
the ionosphere before being "bent" back down towards the ground.
This occurs due to the interaction between the HF signal and
electrically charged particles in the ionosphere. The signal can then
"bounce" off the ground back into the ionosphere, return to the earth
again, and so on. The term "skip" incorrectly describes what is
happening, especially where there is no ground "bounce"

Hello,
If you have a 5/8 wave aluminum antenna
now, stay with that one. It's has much better
performance than the two you are asking about.
Just make sure that when you see any signs
of corrosion on the aluminum antenna, to
take it apart and clean it.

My now, aren't you in bad mood. I never called you any names, whats
your problem? My nontechnical answer? I described exactly what is
happening, so dispute it all you want, its correct. Now would you
care to "technically " describe what you think happens, that is if you
are capable of that?

It might be Sparky, but doubtful.
I suspect, as I'm sure you do, this will
be enforced more along the lines of interferences
at home. Again, if someone is coming over
their home electronics, that could be construed
as a nuisance, and as such could be charged
with disturbing the peace if found.

I have mounted 1/4 wave whips thru the trunk with the same 2.5 or 3
SWR. A KW-7 has always worked great. Better ears and transmit.

Don't use short antennas. 5 feet or longer for 27 MHz.

> is the washer for?

The washer helps to spread the force out on the sheet metal. Just
because it has a wide base does not mean the metal can hold it.
Metal fatigue can be reduced by spreading the torque forces
out with a large washer or a piece underneath made for that purpose.

Did you include the spring? if you were able to tune the 1/4 wave by either lengthening it (which I am sure it needed) or shortening it your swr problem would have went away. 102 inches is not resonant for 27 mhz 10 meters yes.

So much for you being a Big Cber

"Freedom of Speech" and "Freedom of Expression" are 2 different things. The Speech is protected by the Constitutions, and the "expression" is what the perverts and commies use to say they are protected under 1st Amendment, which they are NOT. Not the intent of ther Founders to have VILE dirty potty mouths spew their trash in a Christian country. But since it's been changed to a Humanist country, the TRASH is here, on CB and all over the bands, including the WORST offenders on 52-890 mc video propaganda band!!!!!!!!!!

>because it has a wide base does not mean the metal can hold it.

Are you kidding me with an answer like that? if the metal below cannot hold it
a washer won't help. you are talking about putting a washer below the mount
and in between the roof how in any form or fashion will a washer spread out the
force any different than the mount when tightened down it is ?
You can demonstrate this phenomenon can't you?

>Metal fatigue can be reduced by spreading the torque forces
>out with a large washer or a piece underneath made for that purpose.

What metal is going to fatigue? the roof or the mount? The torque forces are
equal if all mounting hardware is tightened/adjusted equal. I have seen these
mounts in use for many years without any problems. Is this another Xforce
Improvement? If so why not design your own things and leave Daves products shit
alone.

7
VA

You make no sense and show your true Xforce colors.

No I did not decribe "skip", I described how ong distance radio communications are possible by the bending of radio waves. Now if you really think they "skip" of the ionosphere. You have a problem understanding what really happens. My reason for saying it is incorrect is clearly stated in every ARRL handbook, and ARRL antenna handbook. Do I need to scan it for you, or could you read it yourself? You can read can't you? I know that there are words in the books that are over 5 letters long, but you should be able to figure out? Now you play the loon and dispute what published in the handbooks.

"skip" in this case is a noun and not a verb. it is describing the phenomenon of long distance communications of the HF spectrum. in this case we can call it what we like and its no less or no more correct than you calling it "bent". myself i dont like the word "bent" when it comes to this subject because usually when something is bent its distorted and changed from its original form. i prefer to say the radio waves are "reflected" but i guess that would be nit picking and to much like yourself.

Greetings!

Oxidization has little effect on RF, however, the joints that make
contact need to be protected because RF currents will pass thru them.
If they can't - there goes the SWR thru the roof, and the performance
of the antenna dumps into the basement.

Something like no-OX and anti-size compounds work better then allowing
the antennas' exposed joints to corrode. That's the problem, the
contact points. Oxides on the joints occur, and are oftentimes
accelerated because of the types of metals used to connect the two are
not the same and corrode/oxidize at a different rate.

The problem with many antennas is the dissimilar metals used. Unless
parts are soldered, a simple crimp or a bolt thru the joint to make
contact is open for troubles.

You can't solder aluminum - but you can weld it, or use an
anti-oxidant joint compound to extend the life of the contact.

Having completed my unofficial 11-meter mobile antenna comparison the
results are in. And the winner is: Firestik FS-2 which incorporates a
variable-pitch, wire-wound,5/8~,top-loaded,tuneable-tip design.
This antenna outperforms all the commoners on T/X and R/X.
My opinions are in no way designed to cause injury or pain and i am not an
employee of the firestik antenna corporation-The Management.....

Anytime you have a large item mounted to sheet metal, the larger the
area you can apply the motion to is better. At 60 MPH, the wind loading
is quite significant.

> >Metal fatigue can be reduced by spreading the torque forces

> alone.

The roof or trunk will fatigue from swaying back and forth. If you
spread the force out, you will delay the inevitable

I guess you've never seen the holes in trunks after having a small
RS mount in the hole for a while.

> You make no sense and show your true Xforce colors.

I don't care for DaveMade or XForce splatter boxes. Those class C
battle boxes have just about ruined the band on the East Coast. I
only use stock mikes, limiter intact radios and class AB units.

I guess that makes me a semi-keyklown?

BTW, nobody tells me 10-9 unless someone is splattering the
receiving party with a shitty class C overdriven piece of crap.

Those are 10meter antennas,not 2meter.
The Antron99 is a 1/2~ vertical versus the IMAX2000 being a 5/8~ vertical.
Both antennas are horizontally polarized, the Antron99 requires the the use
of
of radials to help correct the Impedance mismatch.
The IMAX2000 has a lower angle of radiation and will outperform the Antron99
using ground-wave propagation while holding a slight disadvantage
when the need arises to shoot the sky.
If ya want gain youre gonna have to build a beam or a box.
Wow,just think of E.R.P. emanating from a 23ft. 2meter vertical,jus kiddin.

> the Antron99 requires the the use of
> of radials to help correct the Impedance mismatch.

Do you believe that SWR can be adjusted with coax length?

The radials decouple the feedline in a dipole arrangement.
The matching network transforms the impedance to 50 ohms
from hundreds of ohms. Only 1/4 and 3/4 wave antennas can
be directly coupled to 50 ohm coax.

> The IMAX2000 has a lower angle of radiation and will outperform the Antron99
> using ground-wave propagation while holding a slight disadvantage
> when the need arises to shoot the sky.

A 1/4 wave ground plane shoots great skip and gets you out
of a valley real good.

Scott that is complete BS you need a antenna with a low angle of radiation
for skip, certainly a 1/4 does not fit the bill.

So? What's different? Regardless of who inspects the station, should
the operator be afraid the they will see the kiddie porn, the pot
plants, the sub-machine guns, or the truckload of ammonium nitrate? Do
you think the FCC agents never reported anything like that to other
agencies? Would it be so bad if they did?

A station inspection is just that: an inspection. It is not an
evidentiary procedure requiring a search warrant. This is the way it
has been for a very long time. Every radio service, sans Part 15,
requires a license, and the terms of that license require that the
operator permit a station inspection upon request. Every time an
operator keys up he agrees to the terms of the license, regardless of
who enforces the rules. If the operator doesn't like it, then he
shouldn't key up.

It seems you have spoken about something you have never seen before. The antenna mount is around a 3" circle where the whole mount rests on top of the roof, and is bolted with 1/4"-20 screws. You would need a washer bigger than a hockey puck to fit under the mount and it would be useless sice the entire antenna mount rest on the roof. Oh btw the mount is also 50 ohms

>
>The roof or trunk will fatigue from swaying back and forth. If you
>spread the force out, you will delay the inevitable

It is apperant you have never seen the davemade antenna mount... Your trunk lid would come off before the mount would. See above

>I guess you've never seen the holes in >trunks after having a small
>RS mount in the hole for a while.

I guess this explains everything you have never seen a davemade antenna mount then. Remotely comparing it to a Radio Shack mount explains I am talking to someone who has spoken about something he has never seen.

Greetings!

No, not BS, Mobiles do it all the time. I've witnessed 1/4 wave antennas outperform Firestiks and Francis antennas due to lossy ground conditions that you get when outbacking in the woods. The attenuating effects of the terrain; hills, trees, shrubs, works against antennas that have low radiation angles.

A 1/4w antenna has a high radiation angle, and if you don't have much in the way above you, they will go farther than a 5/8's or even a 1/2 wave. The ground attenuation will work against low-angle radiation antennas.

The only other antennas that are not as affected by terrain are the 7foot KW Firestiks and other 3/4 wave or greater length tuned antennas. Then the multi-lobe effect works in your favor.

On Sat, 20 Apr 2002 20:24:34 GMT, while the modem was busy tying up IRQ's with the Mouse, "G Man" <markbeck666@aol.comSpam> dissertated the following:

>at home. Again, if someone is coming over
>their home electronics, that could be construed
>as a nuisance, and as such could be charged
>with disturbing the peace if found.

I suppose if it fits within the definition. Here's Washington's definition of a public nuisance:

RCW 7.48.120 Nuisance defined.

Nuisance consists in unlawfully doing an act, or omitting to perform a duty, which act or omission either annoys, injures or endangers the comfort, repose, health or safety of others, offends decency,...; or in any way renders other persons insecure in life, or in the use of property.

So that could indeed include legal radio interference. One of the issues seems to be what happens if the station is operating legally, which is addressed by the following:

RCW 7.48.160 Authorized act not a nuisance.

Nothing which is done or maintained under the express authority of a statute, can be deemed a nuisance.

So the only people that need to worry are the keyclowns. Does that clear things up?

Andy, Are you actually saying a 1/4 wave antenna is better for skip than a 5/8 wave which has a lower angle of radiation. I am not talking about these seudo 5/8 wave mobile since there is no such thing unless the antenna is 22' long.

>

Source record: 121675

Actually, unless the antenna is quite high (2 wavelengths up - i.e. a base station antenna), you'll find that the ground will attenuate a vertically polarized antenna a surprising amount. Verticals (quarter wave) have a considerably lower angle of radiation than a dipole. That said, you'll find at almost every elevation the dipole will end up with a stronger radiated signal. The exception is if you are over EXCELLENT ground. In other words, if you are located on the ocean and put up your vertical, then you'll have a much better low angle radiated signal than that dipole. Over 'average' ground (clay, common in the Eastern seaboard of the U.S.), verticals are much poorer. Of course, it is fairly difficult to mount a 6 element beam on a vehicle ... ;). The 5/8 wave will have a lower angle of radiation than the quarter wave. You won't find them mounted on vehicles either. Colinear arrays, made up of many sections of verticals, can have TREMENDOUS gain. These things can come in over 10 dBd gain. These things can be well over 20 feet in height at 440 MHz (where a quarter wave whip will be only 6 or 7 INCHES in height). The angle of radiation of those beasts will be at zero degrees and have a lobe width of maybe 5 or 10 degrees ... That said, I'll also mention never to trust antenna gain claims. No vertical on 27 MHz is going to produce 10 dBi gain.

I'll tell you why I don't get usually involved in answering tech questions in the NG. After a few seasons of observing this gang, I notice most "contributors" are generally involved in gamesmanship to see "who knows the most". If something comes up they don't know, most are not secure enough to come out and admit it. This leads to a lot of bluffing and misinformation as everyone strives to prove they are "the expert". Actually pretty funny to watch, and I have a sneaking suspicion a lot of the "contributors" come here just to play this game with one another.

1816. Connex 4800DXL/E

Newsgroup: rec.radio.cb
Date: 2002-04-21 00:51:22 UTC
From: Mayor <nonelwishtodisclose@nospam.none.ok?>
Message-ID: <e2ow8.143816$oN6.3145337@news1.east.cox.net>
Source record: 121681

Hi, all. Does anyone out there have any experience with a Connex 4800DXL-E? I am still looking for a good ole radio, and I have just found out about this one. It's considerably cheaper than the Ranger 6900FTB I was considering. This connex has lower power, but that's okay. All of these radios are beginning to look the same to me. This Connex looks similar to the Texas Ranger, and many of those Ranger and Galaxy rack mount type base stations have similar frequency specs. and output (i'm not saying all of those radios are identical, but certain models are similar) They look exactly the same too. I am wondering if one company isn't just making many different brands of radio. My head is spinning like a top!

Another thing, I have just found out about the Cobra 148F-GTL DX+. Now, that is a nice looking radio! (Again, it looks almost like the Connex 4800DXL-E) The exact same radio, but with different names?? Oh well, just like that old fable about the "how many licks does it take..." I may never know. Is the Cobra 148F-GTL DX+ still available for sale? I know that Cobra has discontinued the 148F-GTL, but as stated earlier, I didn't know they made a model with the "DX+" on it. Where can I purchase this Cobra?

One last thing...What kind of final(s) does the Connex 4800DXL-E have? Sorry this message is so long, but most of you guys seem to know what you are talking about, and are willing to help out someone who is "ignorant" on the subject of radios.

Bert, no offense intended, but the statement above kind of makes me suspect that you are afraid to say what you really think. Like I've said before, I'm not afraid to say what's on my mind, even if it steps on another's blue suede shoes.

I'm thinking that the estimate is a bit high, although what may be "hot" here is mediocre elsewhere, I have gone through a few 3300 and 3500's in the past year, bought most of the 35W 3500's for 125-150, and the one excellent 100W I gave 200 for, as new in the box with the processor and CW options, and never even unlocked! There's an ass for every seat, or so they say, but the 3500s ae on the eBay bad list, and Yahoo doesn't seem to draw the big dollars...just my opinion

Blue suede shoes, and you call me old??

You will find that Bert is perfectly capable of taking a position and defending it. He is just a tad more careful than you are to be sure he knows something about it before catching his tonsils on his shoestrings.

Dick, much like you, I know something about everything, just not enough about most to be of consequence. Unless of course, you wish to discuss electrical distribution systems.

1833. My antenna works better than yowrs does, MY ... !

Newsgroup: rec.radio.cb

No kidding. The longer the better. That's why a 102" WITH spring, or my 108's WILL work better than yo 7' whatever, but like da PRO says, because of where you have it mounted, the match may be better with the 7". I still say that the 108" will work better than the 7' there, depending on how much metal is next to it.

\
I had a Bearcat 760xlt awhile back. A good unit execpt for its slow
scanning speed. I converted mine, it was easy. Most cell phones now
are digital instead of analog. This makes a 800mhz scanner useless
for cell phones. When cell phones first started coming out only
wealthy or important people had them.
Lots of interesting converstions. But now every boring person has one
making listening really a waste of time.

Hi, BigJohnsonRadios. I just looked over your website, and you seem to have some very reasonable prices on what I might be looking for (radio). As soon as I decide what I am looking for, and after I get more info. on various radios, I will visit your site again. Your amps are at a good price too! I am just having a hard time deciding what to buy. Thanks.

Randy, it's no big deal. We all deal with situations however we feel we must. I have to admit, it is easier if someone is hitting on your wife or offering your son or daughter some candy ... at that point, it's all ahead flank and damn the torpedos! Then again, some of us may well be above the law. Check this out:
http://www.madblast.com/oska/queen_wild_bill_love_song.cfm

enjoy

ps - this is a bit much if you don't care for somewhat off-color jokes, so don't enter this into your browser if you might be offended. Thanks.

73 from Rochester, NY
Jim

Helps to have a stable of experts for such things. When it gets much beyond 480 3 phase star or delta, I call my dad. One item that interested me was during the CA fiasco it was noted that there are two grids, Eastern and Western more or less, that are not even in phase with each other connected by a 312kv DC line. Now that is mildly amazing. DC would have the advantage of not having to charge a near field 120 times a second but standing under the line if it is 100 feet in the air would still make my nose about 18kv above my toes which must have some effect on the local moose. Standing under the local 240kv stuff all I am is some fraction of the unbalance on the three lines so no big deal.

And converting the DC to vast quanties of presumably 3-phase AC must also be a real trip.

And I am quite willing to grant that you very likely know a lot more than I do.

Dick, they are not in phase with each other simply because of the physical distance between the ends of both and the speed of electricity. The DC tie does create some interesting conditions and problems to deal with.

I remember a guy ran a totally stock
Cobra 2000, on a standard 5/8 Maco antenna.
He came over the two neighbors phones, speakers
& VCR, no matter what he did, it just came over
all their equipment. The FCC came out, took their
readings and determined there was nothing that could
be done.
Well these neighbors must have some sort of
clout, he was ordered by the FCC to operate between
certain hours of the day, as not to cause interference
to the neighbors, now that was some twelve plus
years ago.

>Train

There was a definate reply you just don't know how to read then. How Tall is the mount? How heavy is it? what is to heavy about it afraid your car can't handle a extra lb or 2? Where do you want the washer to go? It would have to be bigger than the size of a hockey puck. If it sucked so bad why did Xforce copy it? Can you name another mount that is 50 ohms and of course will also handle big watts too ? The mount also is made to adapts to the rod of god antenna, maybe those truckstop style mounts your used to Train are a big deal to you. Good Day

oh darn.......they didn't tell you there would be problems from time
to time....well isn't that something. but dsl goes down
too......hasn't lately but it does from time to time. soon we will not
have to worry with such minute problematic situations.....take my word
for it....in a year or two we will all be able to uplink to a satelite
and all this wiring stuff will be old news.

I was wondering where you have the antenna mounted ? are you running A power mike ?its easy to figure out where to put the wire take A 12 volt bulb with two wires put one to ground and the other to the fuse box it will go on when you have 12 volts simple isn't it?let me know and I will get you through this I didn't realize how hard to find good help these days .

I think Dave's point is that the usual Motorola or A/S mounts were, after all, designed by people who know what they were doing and have a bit of an investment in getting it somewhere near right even though they are nowhere near similar. As opposed to a 'specialist manufacturer' operating below the radar. And they don't require tearing down the headliner to put in a washer :-)

As far as PL-259s go, could not agree more but they do the job more or less at 27 MHz.

Sounds more like it's sheep-shearing time in Virginia.

Source record: 121729

Greetings!

No, I'm saying any particular type of antenna will not work for all situations.

When you discuss physical length versus the electrical property of the electrical length, you'll find that ground losses on a ground mounted antenna affect it's radiation pattern, and can work against your efforts to provide gain to a receiving antenna. Try it in the woods, you'll find all bets are off. Physical and Electrical both.

The comparison is electrical property, not physical lengths. However, what is interesting is the use of tuned antennas with the different electrical tuned lengths, and the performance of them as compared to a 1/4 w/l tuned antenna. Since ground affects the "takeoff" angle of radiation, the antennas located close to, or use, the ground will exhibit different characteristics than ones located a fractional wave length or greater distance, above the ground.

There's the sky wave, and the ground wave issue, and since 27MHz is in a "transition" region where both ground wave and sky wave are produced. Comparing a simpler 1/4 antenna on the ground versus the 5/8 wave antenna in a similar situation, the attenuation effects can and do wreak havoc due to the main lobe and it's proximity to the earth. The higher takeoff angle of the 1/4 wave, can use the effect to it's benefit, less attenuation above itself. The lower takeoff angle of a 5/8's wave, will run into attenuation at a shorter distance. This can have an affect on the stations ability to bounce a skywave signal off the ionosphere. The main lobe and working distance do play a role in how the signal will approach the workable regions.

The 5/8's wave antenna will work a lower angle of approach to the active region for skip, and if there is a hill or woods in the way, you can get deflection and backscatter. There is also the effect of the skip zone, where the antennas signal simply bounces down into a region the other stations the 1/4 wave mobile talks to, simply cannot hear. The angle of approach to the active region, and it's deflection angle, affect the area the antenna can reach.

The 1/4 wave antenna will have a higher angle of approach and if not attenuated by that same hill or woods, can reach that active region. And will be able to work stations that a 5/8's wave wouldn't due to that same skip zones region is not where the other stations are, the angle is different.

Sky wave can, and is often, blocked or deflected off of objects -
generating a multipath issue that generates an interference pattern.

Groundwave can travel some considerable distance before the earth
attenuates the currents - and also stays close to the earths' soil
level.

Antenna height has a lot to do with this, but a good 1/4 wave mobile
setup can achieve as good, if not better, results when you deal with
terrain that rises above the antennas own height.

There are really a series of events that take place that make some
stories sound impossible, but are more likely probable then we would
like to think.

:+> Not in the way of Dx or local talking. Completly disagree and I am sure
:+> jay will as well.

I'm not arguing, me and Jay go back a few years. I'm noticing that not
too many people actually take notice of why some antennas seem to do
better in certain types of terrain versus others that will dominate in
another type of terrain.

Tnom and others had an interesting thread or two about this some years
ago and many questions were raised over a similar "phenomenon". I'm
simply kept it in mind while I'm out in the mobile and have often come
across situations since then, that started me posting in this thread.

I'm just simply offering a different point of view and my opinion on
this.

:+> No such thing as a 3/4 wave mobile antenna unless it is over 25' long.
:+>

Are you familiar with "Rabbit Ear" types of antennas?

You get better electrical effects of the tuned length, even though the
antennas used are shorter than their physical length. The key word is
Discone. However, they have poor Q and due to the nature of ground
effects and losses, aren't favored by the general populace. They
simply take up too much real estate to be viable for actual
performance due to their heavy reliance on a good ground image.

From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <neb5cusiithrab9bg20pjobmmhjq2gcom8@4ax.com>
Source record: 121733

Greetings!

I know this thread may be dead, but I just couldn't pass this up...

http://www.lmsal.com/solarsoft/latest_events_summary/gev_20020421_0003/gev_20020421_0003_lm.html

This link is to a NASA/ESA provided Java based movie that shows a recent Class X1 solar flare [today Apr 21,2002] erupting from an active sunspot group that was probable cause for the lack of skip this week. Archives are also viewable in the above link.

Only recently has this sunspot group got active.

It's a neat time-lapse movie showing a flare and the magnetic loop trails of ionized plasma - it's considerably complex in this movie.

To help, a graph of X-ray level from a GOES-10 satellite is on the top, with the "timeline" of when the photos below the graph were taken as the X-ray measurement was taken. The photo on the left is the suns' disk in ionized iron, while the right photo is a magnified image showing the detail of the storm.

Fortunately, this flare was near the suns' limb on the retreating side of rotation - allowing the SOHO's EIT camera filtered for Fe [Iron] spectrum to get a good relief view of the extent or height the flare.

However, due to the strength of this event, you even see the "particle shower" striking the cameras detectors as the flare takes place. The time lag of good clear photos and the subsequent photos shows the speed in which these events can arrive to SOHO's cameras and the effects within a few minutes on earth.

As far as the "skip" goes, events like the one in the link above, help us understand how too much solar energy can also affect skip.

Just thought I'd pass the above along. It's been an interesting week for Aurora watchers. It's an interesting [fascinating for some ;-] use of our tax dollars at work in the pursuit of knowledge.

For those that still use modems, like myself, it's a long D/l but hang in there, you will find this one interesting.

On Thu, 18 Apr 2002 16:10:18 -0400, while the modem was busy tying up IRQ's with the Mouse, "Dave or Debby" <truth@planetc.com> dissertated the following:

:+> The CB skip is gone now. IS it because:
:+>
:+> (a) A Solar Flare killed it
:+> (b) N8 & NerdVoobz killed it with their ion generator
:+> (c) All of the above
:+> (d) None of the above
:+>
:+> Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!
:+>
:+>
:+>

If its a ham, make sure this gets into the papers showing that it was a ham causing the trouble and not a cb'er like most people think. Those ham folks always blame the cb folks when stuff like this happens. Shove it back in there face.

There we have it folks! The truth is out! Aaron has technical expertise! Ha!
I knew it!

Now then, to use typical AKC thinking, this would seem to indicate that
Aaron used this tube as a driver in a CB amplifier. Most likely in
conjunction with sweep tubes, as they use the same filament voltage. There
you have it, guilty as charged!

I'm sorry Doc,
I used a Wilson 2000,K40 trucker,Francis hot-rod,Firestik fibreglass,
also a OK city custom called the "Stryker" which is a
open-coil,center-loaded,
1/4~ , competition-style antenna.
I used base-loaded,top-loaded and center-loaded, my comparison test
criteria required that the antenna must mount on the top of a West-coast
mirror bracket in the upright position with-out being higher than 13'6".
I based my results on ease of tuning,performance and static .
Yes, my results were geared towards the truck driver.......

What the hell! They do that here, too. For some reason 19 has
become the "meeting channel". My guess is that the peak of the
skip cycle drove everyone off except the diehards, and they all
hang on 19 because there is no one on any others. Skip is waning
now and we'll be able to have entertainment with Christmas CB'ers
this year. They peak around the holiday season. Happy hunting!

>antennas.

Andy;
A 1/4 wave antenna does not have a high radiation angle.
Normally running from 10 to 55 degrees, with the lobe centered around
20 degrees. the 5/8 will drop to 8 to 40 degrees, with lobe centered
around 10 to 7 degrees. The ground effect will work against both
antennas, but is greatly reduced by elevating the antenna and using a
"ground" plane

>
>The only other antennas that are not as affected by terrain are the
>7foot KW Firestiks and other 3/4 wave or greater length tuned
>antennas. Then the multi-lobe effect works in your favor.

The 5/8 or 3/4 "tuned" are not true 5/8 or 3/4 antennas. The only
reason they use that terminology is because they use a 5/8 or 3/4
length of wire wound on the core. An vertical antennas radiation
pattern is for the most part determined by its physical length not its
electrical length. Their radiation patterns of the "tuned" 5/8 and
3/4 are essentially that of a 1/4 antenna, they don't have a
multi-lobe effect anymore than a 1/4 antenna. A true 5/8 antenna
would be around 22 feet.

1884. Re: Penetrator 500 question

Newsgroup: rec.radio.cb
Date: 2002-04-21 15:10:02 UTC
From: 'Doc <w5lz@icok.net>
Message-ID: <3CC2D644.88E22DE5@icok.net>
Source record: 121749

Scott,
It just depends on how the antenna is constructed
and if it uses any type of 'coil' for matching (as some-
one has already said). The matching coil is usually the
'weak link' in an antenna. If it's made of too small
diameter wire, or if it's wound too 'closely', it will
heat up with power applied. At some point, the heat
gets to be too much and the solder connections give way.
I have no idea what power level that would be except that
it will be several dozen times the 'normal' power people
use.
'Doc
PS - Sorry 'bout the other post, the devil made me do it.

If years ago the FCC could limit the hours
of operation on a legal base, what do you think
will happen now that counties and municipalities have
the power of enforcement?
Saying your in an up scale neighborhood with strong
ties to the local government, maybe they will put undo
pressure on them concerning interference to them from
a legal radio. They might still consider it a nuisance, wouldn't
you think?

1887. Re: Penetrator 500 question

Newsgroup: rec.radio.cb
Date: 2002-04-21 15:41:53 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3CC2DDC1.C9C0FA6C@qnet.com>
Source record: 121754

Hello Scoot:

The Hy-Gain Penetrator 500 was advertised to take 1500 watts of power. But I have been told it will take 3 to 4 KW with no problem.

Hy-Gain came out with a 5/8 wavelength antenna in 1962, called the Golden Colinear, that sold for $93.00, and was a flop. The antenna was supported by a single point support insulator. Just try to hold a 20 to 22 foot vertical piece of aluminum tubing in your hands, it ain't gonna work! These Golden Colinears where also sold by Newtronics, (somewhere there a connection between Hy-Gain and Newtronics) but in all my time, and crossing the country I have never seen one of these antennas. I believe its due to they all broke, the single point mount of the vertical element was a poor design. I can send you a e-mail with a photo of the Golden Colinear if any body would like.

Hy-Gain came out with the CLR-II, 5/8 wavelength antenna, with the famous 2 point mount system, that was also used on the Penetrator 500 and to this day a lot of the Amateur Vertical all band antennas. But again Hy-Gain had problems with the CB'ers and 10 Meter Ham users burning out the CLR-II. They used a cheap Impedance Matching Device that was a round circuit board in the bottom insulator, that had the Impedance Matching Coils, etched onto the circuit board that would not take a lot of power.

I am sure the meetings at Hy-Gain where something that should have been filmed!

So the Hy-Gain Penetrator 500, 5/8 Wavelength Ground Plane was sold, and advertised to take 1500 watts of power. Its was a smashing success.

Many of the Penetrator 500 users have replaced the Impedance Matching wires with 3/8 or 1/2 inch copper tubing. I suggest tinning the copper tubing before having it come in contact with the Aluminum Tubing. This will reduce some loss in the Impedance Matching Wires. And you will need a antenna analyzer or SWR meter and some time to tune it.

Also as the power is increased, 5KW+ its possibly that arcing from the vertical element, over and thru the top insulator to the base assembly may occur. The Upper Insulator must be kept clean, and more insulation must be added to the base of the vertical element, as it goes up from the upper insulator. Put in Black RTV Silicon Rubber, between the upper insulator and vertcal element. Good quality 3M Black Tape can be used to tape up the vertical element, at least a few inches above the Base Assembly.

New Injection Moulded (ABS) Plastic Top and Bottom insulators are availabile from Hy-Gain, Part number 463056 Upper Insulator, and 879757 for the Lower Insulator. Hy-Gain can be reached at:

http://www.hy-gain.com/hy-gain/contact.php

Let me know if you have any problems.

There are a lot of opinions on this one. DSL vs Roadrunner... well, in my area, DSL is cheaper. $29.95 a month for the slow DSL and $39.95 for the high speed DSL which is faster than Roadrunner at $44.95 per month (unless you subscribe to cable, in which case it is $39.95 and still slower than the DSL). The phone folks were working two blocks away and cut my phone line. My phone was dead, but the DSL was STILL WORKING! Go figure! I'm using the slow DSL service and my downloads always run 30 - 31 KB per second (unlike my neighbor with Roadrunner, which with many users on Roadrunner has slowed down to my old dial-up connection speed, with downloads running 2-3 KB per second). The worst I ever had was due to a poor download site and then I only ran 16 KB per second. This only happened once. I guess ya picks what works for ya in your area. Kinda like antennas, the beam has more gain than a whip, but try and mount one on your Volkswagon.

>
Esentially when the Connex 4800 (the DXL) started out, it was identical to
the Cobra DX+. The Cobra DX+ was an extremely limited run radio, as it was
manufactured by mistake, from what I've heard. Either that, or Cobra
changed their mind shortly after giving the go ahead for the unit. The
Cobra model is basically impossible to find new now. Even as a used unit,
you'll be lucky to find one. Seems once someone gets their hands on one,
they don't want to let it go.

The Connex 4800 line of the radio has continued, and changed since it's
first days out of the factory. The original was a basic export radio,
12-band, with very few bells and whistles. The current line includes
features such as variable power, echo board, etc...

> One last thing...What kind of final(s) does the Connex 4800DXL-E have?

I'm not sure if they changed the finals since it's inception, but they
originally had a dual driver setup consisting of a 2SC2166 driver and
2SC2312 finals. For more info drop by my website included below... (under
the Latest News section, click on the "info about me" link. You will find
links to all kinds of information about the Cobra DX+ / Connex 4800 DXL.

kwthom,
Sure, there are several antenna modeling programs
available. They all use the NEC engine, just the
user interface is different. Depending on how juch
information you 'feed' them, they can give you a rough
approximation of what an antenna will do. Also, they
beat the hell out of $300/hr for an antenna test range!

Jesus IS Holy and we are suppose to be too!
As far as the squeal goes, it is Extremely hard to find "GOOD" CB help these days. I hear all the time how rare I am (and the other GOOD CB techs out here). Usually the squeal is caused by an antenna system problem, in the CB or the AM/FM radio. Does the AM radio have a lot more noise on it when the car is running?

Nothing has been done to the radio... Everything is stock aside from four components being changed out, all of which I still have to originals in a small plastic zipper bag. None of the echo, or anything else like that is in the radio. It's all mounted inside a small "toy box" I made (but have not yet finished). The radio is essentially stock...

Jim, being where you are and due to population density, DSL would undoubtedly be your best option. Things are close there...an advantage for DSL. Here, where things are spread out, and pop density is not nearly so much of a factor, cable is much faster. I get 200+ KB per second D/L speeds.

Most of my business for the last 5 1/2 years has been geared to BIG Truck drivers that want the most amount of CB range for the least amount of $$$. You need to come and SEE ME and I will show you what WILL work better. It sure isn't a 2' Firestik or any 2' antenna. I mainly get drivers antennas that are under 13'6'' when mounted--total antenna length 4 1/2' to 6 1/4'. They will WAY out perform what you have found out. E mail me directly @ truth@planetc.com to tell me where you run to so we can see if I am on your way ever.
Dave!

L. Wing Pinko:
To the Left wing, everything is boring. Come over and BE RIGHT, sunny! I use to say that IF you had a CAR PHONE (that's Cell Phone for you yungsters), then you was Impotant. Now EVERYONE is impotent and because of that, and your leftist leanings, it all seemsa boring to you. Sounds like you need to get away from those Clintonites you associate with and find out what the REAL world is like! CB radio is NOT boring! Try CB instead! You won't be bored! Guaranteed!
Dave!!!!!!!!!!!!!!!!!!

I find absolutely nothing wrong in gearing these tests
towards a truck environment and I admire you for taking the
time and effort to perform these tests.
However, there's a few other unanswered questions about the
conditions of the test that I'd like to know if possible.
What brand of truck?
How much steel or aluminum was the mirror bracket attached
to?
Left or right side or both?
Did you add any additional grounding to the
brackets/door/body?
Was the roof of the cab metal?
Was the door jamb/door skin metal?
Was there a trailer attached?
A box or a tanker?
Did you try these tests with and without the trailer?
Which direction was the test station in, relative to the
trailer or otherwise position of the tractor?

For the rest of the group....Does anyone perceive any value
in having a antenna test range available for mobiles or do
you find that modeling software suits your needs
sufficiently?

Has anyone ever taken one of those Francis 7 footers apart?
When they first came out I did. I shaved it.
I found (3)separate wires running parallel along the whip
length.
I figure that's why they call it a 3/4 wave antenna.

Nonsense. I simply did a web search on the plate dissipation of some
commonly available tubes. The 6AQ5 has around 12 watts, perfect for CB
applications. (And PLENTY of headroom for legal limit)

The problem with you keyclowns is that you can't think for yourselves.
Try it sometime.

Yep, there is. Between Barjan, who owns the Francis & Wilson antenna companies, against DAS, which also supplies truckstops with JUNK ! Barjan quality is slipping too, making some items in China. Because in a communist country, there is only ONE distrubutor, and since all of this buying up of smaller companies by truckstop suppliers, DAS ain't gonna sell anything owned by Barjan, and probably visa-versa. Wawawa. So WHO suffers? They both do, and the truck driver. Flying J and Pilot sells DAS, and smaller places and probably the TA & Petro sell Barjan. This DAS stuff is REALLY junk! Bad mounts right out of the package! It is the most sorry display of CB stuff I have ever seen in a truckstop! Vas is Das? Anyone else know any other details of what I found out here? OR am I wrong?
Dave!!!!!!!!!!!!!!!!!!!!!

Don't make mountains out of molehills, Randy. The 6AQ5 is the seven pin
minature version of the 6V6 generally used for audio output in days of old
but it was a popular output tube in a lot of CBs and car radios (usually
12AQ5). It was good for about 7 watts in Class C and was rugged as hell.

Brian,

I will give you the straight scoop. It looks like you have an
especially bad infestation case of "keyclown". Most keyclowns (such as
the ones who post in this NG) have as their goal drowning everyone out
and not letting anyone talk. However yours has some sort of automated
system to do it 24/7.

Since CB is unregulated (the keyclowns want it that way) there's not
much you can do about it. Vigilante action might land you in jail or
get you shot for trespassing. Unless he is also interfering with local
consumer devices, you're basically screwed.

No need to appoligize to Ray Davies and the Kinks. They're has-beens
and never were any good anyhow. If you had bastardized a Metallica
tune, they'd be after you like they went after Napster! Poofter!

When will you learn that the only way to classify antennas is by electrical
length. So what, it's loaded. How would you classify it? This should be
interesting.

It's rare to find one in the CB shop world that actually finds and fixes antenna problems; fixes CB's (not just "peak & tune" generic shops), sells good quality items NOT made in RED pinko China, and does a GOOD job, & is Honest. Problem is that the BAD places give us good guys a bad name, but our fame is increased because we do it right, goes out miles ahead of us! Thank The Lord for making us good!

1934. FS: Four Heathkit GW-21 Citizen Band Walkie-Talkie Transceivers

Newsgroup: rec.radio.cb
Date: 2002-04-21 20:22:02 UTC
From: mnowlen@yahoo.com
Message-ID: <3cc32086.81630117@news.va.comcast.giganews.com>
Source record: 121799
Cross-posted to: rec.radio.cb,rec.radio.swap

See Pictures:
http://mywebpages.comcast.net/mnowlen/heath-gw-21-front.jpg
http://mywebpages.comcast.net/mnowlen/heath-gw-21-top.jpg

Four Heathkit GW-21 CB Walkie-Talkies from the 1960s. I had a similar set as a kid. I got these with the intention of restoring them but just don't have the time. Two look to be complete and fairly clean with all controls and whip antennas. The other 2 can be used for replacement or spare parts. Two sets of snap-on leather straps included. Someone with the time and ability should be able to make a good pair. Sold as-is.

$40 for all four
Plus actual shipping charges
Send Zip code for shipping costs

Please email if interested,

Mike

> and not letting anyone talk. However yours

How in the world did you ever come to this conclusion, Hambo? Is this
what YOU do on the 2 meter CB band? Or on 160 or other ham bands? I have
NOT seen any indication of this in the NG. Are you dreaming this, or have
you been to too many "shootouts?" !

has some sort of automated
> system to do it 24/7.
>
> Since CB is unregulated (the keyclowns want it that way) there's not

No, The US Constitution MAKES it that way. Only commies regulate,
sunny, pursuant to the 6th plank. You don't like it, LEAVE the USA !

> much you can do about it. Vigilante action might land you in jail or

Can a "pin" in the coax ever be construed to be "vigilante" or just
getting rid of troublemakers?! Did anyone hear of someone getting into
trouble for "pinning the coax?" !

> get you shot for trespassing. Unless he is also interfering with local
> consumer devices, you're basically screwed.

What he means here is that as long as it is not interfering with a
communist approved activity (i.e. 52-890mc TV propaganda band), then the
commies won't help you! Communism and BIG govt. isn't here to help
YOU--they are hear for the furthering of THEIR goals, period. And their
goal is to make sure that their brothers in Hollywood get NO TVI interfering
with their VILE trash and Un-American preaching!
Dave!!!!!!!!!!!!!!!!!!!!!!!!!

> elpasogunslinger

Heh,
Problem here in Ventura is that the Truckers think 15, 17, 19, in
effect, 14 through 20, are "their" channels. I've even been on 25 talking
local and Drivers will now and then come up there and request we go "higher"
as we are bleeding on them. Where I live there are several "coolers" and
other warehouse type operations within a mile or so. The drivers sit in
their trucks and wait for bay assignments, while others just gab between
themselves. They don't see why we can't honor their requests cause they're
so damn important to our country's economy, etc. We get that one a lot. You
know, how this country would collapse if it weren't for the truck drivers.
lol... You can imagine what happens next. :-)

>thinking...nothing more, nothing less.

Randy, look back over this thread and see who is being "absurd".

1) Tube Boy advertising his 3CX3000A7's in a CB newsgroup. I don't see the ad crossposted to any ham newgroups, so the old excuse of "it's meant to be seen by hams" won't fly. You know and I know his ad is meant for keyclown CBers.

2) Nebo saying the 3CX3000A7 is intended to be used by CBers at the legal limit.

3) You accusing me of "technical expertise" just because I was able to do a web search and find a cheaper tube that actually DOES run the legal CB limit plus adequate headroom.

(I think that's why you dopes are at the mercy of "techs". You let them do your thinking for you)

So if you were trying to point out the "absurdity" of my thinking, you failed miserably, Randy, and actually proved THE OPPOSITE.

As usual.

Not to disagree but I wonder. Take a five-foot piece of fiberglass and wind a helical dummy load and at some freq you get 1/4 wave resonance. Given that reactance increases with freq there is a pretty good chance that it would make 3/4 resonance at twice the freq or so. So you now have let us say a helical dummy load working at 27 and 50. Looks like 9ft at 27 or 14ft at 50; seems reasonable. Same five foot stick.

Now whatever it might be, it looks electrically like a 1/4 wave or 3/4 but does it radiate like one? Well, the loading drops the feedpoint impedence to about 20 ohms which also cuts the bandwidth and tapping up to get 50 does not change this fact. And current is spread over only five feet in both cases which lowers radiation efficiency to about 70% at CB vs a whip and probably closer to 60% on 50 MHz. The question in my mind is do you still get the gain of the 3/4 with the spacing all wrong. Somehow I don't think so. Now you can fiddle with the winding to get more wire at the center and up (at the price of increased resistance vs an already low feedpoint) and help that a bit which is what the good ones do but it does not change the wave-spacing problem. At least a priori and I have never seen anything published along this line (incidentally coil loading was

worked out sometime before 1924, the Navy had a manual on it) this would lead me to suspect that the idea of a 5/8 or 3/4 helix is a chimera.

The differences between a real 1/4 etc and a loaded quarter are significant enough that I don't think it makes sense to put a whip and a helical dummy load in the same category; seems a bit too simple.

Dick N&#65533;BK

I got it here.
Probably down to Geocities bandwidth and linking rules. I read that they refuse to allow images to be viewed from external references or links. This is to reduce bandwidth, but if that don't work, they shut down access to the site for a while.
It's possible that some newsreaders or browsers fool the server and manage to get the picture.

Prove it.

===
> Thought you were untraceable huh.
===

Thought you could trace someone with a firewall... huh.
Didn't know that many of the UK ISPs have their offices in the west midlands,
and that is what you traced... huh.

But you thought you were untraceable when you used the name "Keyclown Killah"
to e-mail your crap to me. The header info is included at the bottom of this
post.

===
> As I said before, YOU initiated the
> attack with the fake web pages (which you'll deny).
===

As you have a great respect for the law...
Innocent until proven guilty, so prove it.
I have provided the IP numbers to prove that "Keyclown Killah" was you,
so let's see how you link that site to me... show us the proof.

Anyone can see the IP numbers, and even the ISPs do not match.

===
>And now you're crying
===

You are crying about that web site, "Keyclowns", "Keydowns",
"linears", "freebanding", modifications... The list goes on an on.

You know all about crying... it's all you ever do on this newsgroup,
cry about how other people live their lives.

===
> You issued a few denials. That's not calling a bluff by any stretch of
> the imagination.
===

No, I asked for proof... but you have none, it's all bluff.
You cry and make these accusations... prove them.
I'm calling it... show us your proof.

===
> Oh, we can go a lot further
===

Not without proof.
Show us the evidence, or the case is dismissed. You may want to
continue wasting bandwidth and trying to ruin the newsgroup, but
count me out.

===
> I see...so you will deny your brummie connection to your dying day.
===

I see, you want me to lie... so you can feel good about yourself.
Go get lessons in tracing people.

===
> Proof? I demand disclosure of that so-called "proof", otherwise
> it shall not be accepted.
===

No, no, no, my law loving friend... you have to prove guilt, that's
how the law works.
Or does the law only apply when it suits you?

Prove guilt, or the defendant is declared not guilty.

===
> >As for me, I have more important things to deal with right now...
> >I have a life outside of this newsgroup, a family to spend time with,
> >and now I have business out of town.
>
> Boo hoo hoo. Cry, buster, cry.
===

Boo hoo... someone did a web site.
Cry Aaron, cry... Who cares, good for them.

I am stating a fact, I have more important things in my life than
people like you. Shame that trolling is all you have in life.

===
> How do you know WHAT my schedule is like
===

I can see that you are on the computer most of the time... and that
doesn't include the time you spend reading the messages and
searching the net for "keyclowns".

===
> The alias ("aaronnvoobner@yahoo.com) used to promote the

> fake web pages was the same one used to spread the virusy download
> via email.
===

Look again, the e-mail addy you quote above is not the one "used to promote
the fake web pages"... check the ng messages again.
Anyway, how do you know what addy was used in an e-mail I received, unless
you sent it?

If people check, they will probably find that e-mail came from an american
AOL account. Oh, don't tell me, I am now in america... LMFAO.

But, Tim admitted that he sent the original to YOU.
YOU defended those e-mails, saying that they did not contain a virus.
Why, if you did not send them?
And why are you now saying that they were "virusy", when you said they were
not.

You are getting caught in your own web of lies.

===
> An alias manufactured in YOUR workshop no doubt.
===

But there is doubt, specially as you have proved yourself to be a liar,
although your credibilty was so low anyway.
And if the e-mails were sent from America, that casts rather serious
doubt over that theory.

===
> HOW could you possibly get THAT from anything I said?
===

Your brain is on a go slow this month.
You say that Tim sent you that video, so it is his fault that you then sent
it to me and several other people on this newsgroup.
Yet you are now claiming that someone else is to blame... make up your mind.

The newsgroup has suffered enough... show us the proof, or the case is
closed.

Brainbuster.

> If years ago the FCC could limit the hours
>of operation on a legal base, what do you think
>will happen now that counties and municipalities have
>the power of enforcement?

For starters, they only have LIMITED power of enforcement of FCC regs, only those which the FCC has expressly granted. The states have always had other powers of enforcement, and some of them exercise those abilities. For example, there are several states that declare it a felony to intentionally cause radio interference to emergency services, despite the FCC regulations concerning the same.

> Saying your in an up scale neighborhood with strong
>ties to the local government, maybe they will put undo
>pressure on them concerning interference to them from
>a legal radio. They might still consider it a nuisance, wouldn't
>you think?

I think it's a little bit paranoid to think such a thing, since, like I said before, it's pretty easy to resolve interference problems when the parties behave like civilized people. But if I'm in an upscale neighborhood, I would probably be able to afford a good attorney (assuming there is such a thing) and mount a valid legal defense. Actually, I would probably move, because the neighborhood you describe doesn't sound like a place where I would want to live.

Regarding your earlier example, it sounded like the FCC was exercising it's authority to resolve an interference problem that apparently couldn't be resolved any other way. That action was well within their limits of authority, and I think it was pretty lenient since the FCC could have shut the station down completely. If the circumstances change, I'm sure the operator could get the order changed.

That's the way it has always been, with or without the FCC. Learn to live with it, just like everyone else has done since the beginning of civilization. But it's clear that people who abide by the rules get into far fewer scrapes with the government than those that use the paranoid delusion of imminent victimization as a justification to violate the law. IOW, you could avoid most of the problems and just operate legally...

Now then, the above statement is probably correct, but back to my original question. What other means would you use to classify an antenna? In this case, a helical dummy load would suffice, but would the same be true of a Bugcatcher or Screwdriver? Both of these are loaded as well. If Firestick or whomever wants to wrap a 3/4 or 5/8ths length of wire around a fishing pole blank, how should they rate them? A good analogy would be fishing lures...most are made to catch fishermen. I realize your point here, but there has to be some uniform rule to rate antennas, and electrical length is the commonly accepted rule, is it not?

The truck is a 96 Freightliner Classic Flat-top which pulls a 39' Frameless
End-Dump Trailer, the trailer is mostly aluminum with a steel floor. The
antennas were mounted on the drivers side mirror bracket which is mounted to
the cab and not the door, thus eliminating the headaches of grounding thru a
hinge. SWR is flat beyond both ends of 11meter band.
The entire cab is metal and cophasing was not an option because of cost.
The coax is RG8-X with Amphenol connectors.
I prefer the Omni-directional signal of a single antenna installation.
Co-phasing looks good on a mobile rig but unless they got got 9ft. of
air-wave space the desired gain is lost.
All testing was done from both stopped and moving positions.
DX contacts are dependable and consistent when conditions permit.
At $20.oo i could'nt beat the price.
The transceiver is a old-style 2950 with a stock mic. and enough coax to
reach from the radio to the antenna, { 5.5ft. }.
I don't want to discuss the electrical properties of coax but high
shielding, .78 V/F and low attenuation are desired properties of 50ohm coax.
I hope all your questions were answered correctly......

What a load of bull. Perhaps out in "the midlands" a couple of forged
IP numbers bodged together constitutes proof, but people here in the
USA are not that easily fooled. You remind me of another guy in here
a few months back, name of "Phil". He was convinced I was about six
different people and he had "proof" of it too. Eventually he cracked
up and left the group.

Tim,

a) You KNOW your argument is absurd. And so does everyone in this NG.

b) Do you have any idea what it would take to run a 3cx3000a7 limited
to 4 watts of output, versus a 6V6 or a 6AU6?

Oh damn, now I've done it. I'm sure (b) will trigger an extended
discussion among the "experts" of RF tube performance, which, to
hardcore keyclowns like you is the equivalent of pornography.

Ok then how much drive would it take for the 3cx3000 to produce 4 watts ?
It will take more power to lite the filament than it takes to produce 4
watts ouput. Not a smart idea
And a 3cx3000 will not work at 4 watts output.

Stupidity is stupidity no matter what your name is Tim... 4 watts is a far cry from 1500 watts, which is 50% of the rated output of the tube. While 4 watts is what maybe 1%
What will you use to drive the 3000? The radio LOL Either way you look at it Tim you are going to be illegal. End of your Dream!

1976. Re: Antennas

Newsgroup: rec.radio.cb
Date: 2002-04-21 23:22:29 UTC
From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <90i6cugumeaeqi325k9o3ujimgju8gvdg5@4ax.com>
Source record: 121840

Greetings!

I see you didn't get the point I was making on the ground attenuation issue, the propagation issue, and how all this is relative to conditions and terrain.

I wasn't taking about height, I was discussing ground level based antennas and how their performance is affected by terrain. You threw in height, which is something I wasn't going to even disagree on, we both know the answer to that.

The "issue" I was taking about was with ground-level antennas and their different electrical properties. What appears improbable to the point of disbelief to some, is actually probable due to other factors.

But thanks for posting your notes to prove that takeoff angle or main lobes are different for the various electrical lengths. It does help the discussion.

Granted a 5/8 physical length antenna is far longer than a 1/4 wave physical. But, when dealing with physically shorter antennas with their electrically different tuned lengths, performance in the conditions they're in are vastly different, and it depends a lot on terrain when you don't have the advantage of height.

On Sun, 21 Apr 2002 14:59:25 GMT, while the modem was busy tying up IRQ's with the Mouse, topcat <dallastopcat@yahoo.com> dissertated the following:

Sounds like a Brittish problem. Us Americans don't5 know what you mean by "my mates." Does this mean "my friend's"? This has NOTHING to do with CB's, right?
Dave!!!!!!!!!!!!!!!

I don't think that Train is a truck stop buyer/ customer of mounts. There are BIG Truck mounts and there are 4 wheeler mounts. The non-trucker CB shop sells 4 wheeler mounts, while the truck stop sells ONLY BIG Truck mounts. I sell both 'cause I do both. I never have got into the BIG power N8 Vooblewatts that allegedly "Dave" makes, so tell me WHY won't a big AS or Hustler ball mount work with yo big watts? How many watts are we talking here (RMS) AM dead key?
Dave!!!!!!!!!!

Electrical length is certainly a factor, loading if any is one, how it is loaded is a factor (a vertical with a capacity hat on top (Marconi) is not a base-load but they both are quarter-wave verticals and conceivably resonant at odd or even quarterwaves which presents some interesting feed problems). There are vertical folded unipoles, collinear, loops, etc. that are variations on the theme. And such wonderment as J-poles.

I guess my biggest problem is really why classify them at all? If it is intended as a substitute for thought and knowledge it is a really poor idea. It seems to me to make more sense to have a general idea of what is happening in a proper antenna system and adapt it to make some sort of judgment about how they behave in particular situations. This is the 60s in my soul: the function of education is the development of an infallible bullshit detector.

One of the great endless arguments around here is the diff between a 102" whip and a helical antenna with some variation of its windings or base-loading vs center-loading not to mention mis-defined 'top loading'. In theory, the whip beats hell out of all of them if mounted in the center of the average schoolbus and probably does in practice as well. The problem is that no one drives a schoolbus to work and if you put a whip on it the state's overhead signs are in deep trouble. So it is compromise time and the jolly boys at Firestik have a pretty fair compromise between theory and practical use. It really boils down to performance in a given situation, not some comparison (dbi) to an antenna that does not exist on a test range no one has using a groundplane common only to broadcast stations and school busses.

Even 'helical' as opposed to base, center, or top loaded quarter-waves can be sub-divided and incidentally take in round numbers about twice the wire they represent. We can use a simple winding technique like a lathe and continuously load it -- the rubber duck or helical dummy load (or proctoscope at some frequencies) or we can use a logarithmic twist or virtually any kind of cute pattern we like. We do so to maximize current at the base (less the inevitable small coil to get a match) at the expense of needing more wire and introducting more heat and less radiation. We do this because in a whip maximum current is at the base and it is current that produces radiation. Compromise, compromise.

Any antenna is simply a probe into the universe, much like the spike on the magnetron in your microwave, and the universe has an input impedence of 377 ohms. The mismatch will mean that in the immediate vicinity -- two wavelengths or so -- there will be a lot of standing waves hanging around like a subway station at rush hour until the relationship between the static and magnetic components get to 377 and they disappear as radiation. It also means that metallic thingees in the vicinity have an effect. It might be planned like a yagi, unplanned like your roofing nails in an

attic dipole, or simply inevitable.

It is certainly not necessary to solve every problem from James Clerk Maxwell's equations but it is kind of necessary to have some feel for what really happens before we go classification-simple. That's all.

1989. Redneck Delivery

Newsgroup: rec.radio.cb
Date: 2002-04-22 00:59:30 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <6un6cuk5song1bo6p20n7houe59kftdeed@4ax.com>
Source record: 121852

In the back woods of Oklahoma, a redneck's wife went into labor in the middle of the night, and the doctor was called out to assist in the delivery.

Since there was no electricity, the doctor handed the father-to-be a lantern and said, "Here you hold this high so I can see what I am doing."

Soon, a baby boy was brought into the world. "Whoa there," said the doctor, "Don't be in such a rush to put that lantern down. I think there's another one coming." Sure enough, within minutes he had delivered a baby girl.

"Hold that lantern up, don't set it down there's another one!" said the doctor. Within a few minutes he had delivered another baby girl.

"No, no don't be in a hurry to put down that lantern, it seems there's yet another one coming!" cried the doctor.

The redneck scratched his head in bewilderment, and asked the doctor, "You reckon it might be the light that's attractin' 'em?"

>3 watts is headroom?

You technically illiterate twit, the power rating given was the plate dissipation. Running class C with a 12 watt plate can provide quite a bit more than the legal limit for CB. And since it's a toob, it's far more capable of "headroom" than the severely limited solid-state equivalent. You could probably hit 50 watt peaks, but not for very long or the thing will start melting.

None, if you are running class A with no grid current.

>It will take more power to lite the filament than it takes to produce 4
>watts ouput. Not a smart idea

Not very efficient, is it?

>And a 3cx3000 will not work at 4 watts output.

Sure it will if you run class A, which I'm sure it could handle quite
nicely. But the first spike that comes out of the exciter would
probably vaporize the plate circuit.

Not a problem at all. I hope all the info I was able to find and give to
you helped you out.

That's pretty funny, really. Listed on Copper's website under the 10-meter
radio section, but on the page clearly displays 11-meter CB channel 19 on
the display of the picture... Modify for 11-meter and tune-up.. $30? Shit,
the one I got really didn't need any tuning... Plus the switch to 11-meters
is easy... Move one jumper if you only want CB. Move two jumpers if you
want the whole shebang...

>Sparky, we're talking same configuration.

And your argument still doesn't hold water because a lot of these
antennas are used for multiband or wideband rigs. Fact is that you can
take any length of wire and load it up to resonance in spite of the
wavelength. On top of that, a helical antenna takes more than an
equivalent length of wire; for example, a 1/4 wave helical uses more
than a 1/4 wavelength of wire (which, BTW, makes the antenna more
inductive, since all you are doing is winding a coil. A cap is needed
to bring it back into resonance, which may or may not be provided by
the distributed capacitance of the windings). Also, a helical has both
a vertical and horizontal polarization, which of course if independant
of wavelength. So I think Dick is right, you can't put a helical in
the same category with a straight whip.

Yeah, I hear you both. Hey, I'm originally fron Oregon so the New Jersey Jokes aren't exactly breaking my heart. All in all, I'd have to say NJ is a pretty happening place. True, northeast NJ is primarily industry driven but southern NJ has some really beautiful spots. So respectfully, :-p to both you and Mr. McCollum. :-)

While I'm not much of a NBA fan, I'm keeping my fingers crossed for the Trailblazers. They have their work cut out for themselves with the Lakers. Bert, what NBA team are you rooting for...isn't it the NEW JERSEY Nets? Take care and 73.

excuse me you non pussy getting star watching geek but why would a we want to run a 6aq5 in class c in a final output of a cb? arent you the same guy that said class c could never properly amplify an am signal much less a ssb one, so why use class c numbers now? and near four times the legal power that tube will begin melting down anyways. i wouldnt call that much head room at all. as a matter of fact i'd call it damn risky when theres so small a difference between whats legal and when that tube melts down(your own statement).

SURVIVOR - KEYCLOWN STYLE

We took TEN KEYCLOWNS....and marooned them on a deserted island. No food, no water, no internet connection -- and no "techs" to tell them what to do. Can they survive? Let's meet them:

THE YELLOW TEAM
Randy
Moparholic
Twistedhed
Tim Nebo
Big CBer (Scott)

THE PINK TEAM
Landshark
Brainbuster
Jeff Mayner
Train
Jay

The first challenge....

HOST: OK Keyclowns. We've given you a propane soldering iron, a bunch of radio parts, and some 12 volt batteries. Your challenge is to create a simple transmitter. A Navy rescue ship is circling 3 miles off the coast....

CUT TO: Dick, N0BK, in the ships radio shack, sipping a beer and wearing a set of headphones. Dick gives the "thumbs up".

HOST: The first team to get their transmitter on the air and send a message to the Navy rescue ship will get off the island and recieve food and medical care. Good luck!

THE YELLOW TEAM immediately sets to work.

RANDY: OK, gimmie that battery.
SCOTT: I have to use the bathroom.
TIM NEBO: Shut up Scott, this is an island. Hey what's this glass thing?
MOPARHOLIC: It's a tube! I seen one of those in my bootleg ham set.
TIM NEBO: Hook it up to the battery!
TWISTEDHED: Don't do that! The saucer men won't like it!
RANDY: Ignore him. Let's do it.
TIM NEBO: I think we shold use ALL the batteries. That'll give us more watts.
SCOTT: Yeah! MO WATTS!

ALL (chant): MO WATTS! MO WATTS! MO WATTS!

BOOM!

SCOTT: OwWWW!!!
RANDY: Oh shit. That glass thing blew up in Scott's face.
TWISTEDHED: I told you the saucermen wouldn't like it.

CUT TO: Dick N0BK at the headphones.

ENSIGN: Anything yet?
DICK: I haven't heard shit.
ENSIGN: Nother beer?
DICK: Why not.

HOST: Well too bad, the Yellow Team has failed miserably. After the break, we'll look at how the Pink Team is doing. Stay tuned, there's lots more action coming up on....SURVIVOR - KEYCLOWN STYLE!

My hopes exactly. The news is getting rather boring as of late. And yes,
I've seen the mountain. I've made numerous trips into PDX, just across the
state line.

Agreed, I said the same thing to him
just after the decision was handed down. But I'm
curious if you think that if they (local law) could go
this far, what prevents them from going a little farther?
Meaning, if you were running legal and there really
was nothing they could do, why wouldn't they figure it's
ok to charge them with disturbing the peace? I'm not
trying to sound paranoid, I don't run anything, so
that's out, but what prevents it from happening?
You can say the law, but you know as well as
I, how far and how much are you able to afford
to defend your rights?

Probably the fact that what he is doing is legal, as well as being previously addressed by the FCC.

> You can say the law, but you know as well as
>I, how far and how much are you able to afford
>to defend your rights?

I do a pretty fair job on my own. Most lawyers will only help you until you run out of money, so it's really up to yourself to learn how the system works. The government needs an occasional kick in it's judicial ass, but most of the time it's not worth the fight. And it's a very good idea to learn the ropes just in case you find yourself on the receiving end of some legal interference.

There you go, thinking about stuff you know nothing about, failing to pick up a book and do a little reading on the subject, refusing to discover for yourself that Class C cannot be used as a LINEAR amplifier because it's not linear, ignoring the fact that you don't need linearity when the final is also the MODULATING STAGE, but instead you speak your mind and provide further proof of the hazards of self-induced hypoxia.

> and near four times the legal power that tube will

Again, my intellectually bankrupt troll, your "headroom" only needs to allow the power peak of an AM signal, which is 16 watts. If a tube can handle 50 watts for very brief periods, I would think that is more than enough "headroom".

There is a lot of product that is carried by rail. There would be more if
the tariffs were not slanted towards trucking.

Of course, trucks are indispensible from the rail head to the market.

SURVIVOR - KEYCLOWN STYLE - (Continued)

We took TEN KEYCLOWNS....and marooned them on a deserted island. No food, no water, no internet connection -- and no "techs" to tell them what to do. Can they survive? Let's meet them:

THE YELLOW TEAM
Randy
Moparholic
Twistedhed
Tim Nebo
Big CBer (Scott)

THE PINK TEAM
Landshark
Brainbuster
Jeff Mayner
Train
Jay

Both teams were told to build a radio out of spare parts and signal a Navy rescue ship. The first challenge continues....

HOST: The Yellow team failed their challenge miserably after they connected a shorted 6AQ5 to several 12 volt batteries in series. Poor Scott received a face full of glass when the tube exploded....

SLO-MOTION REPLAY of TUBE EXPLODING

SCOTT: Owwww! Owww! Ayii!!!!
RANDY: Mopar. Get Scott a band aid.
MOPARHOLIC: I don't feel like it.
RANDY: I'm the team captain and I said do it.
MOPARHOLIC: You're not the boss of me.
RANDY: Wanna make somethin of it?
MOPARHOLIC: Yeah!
RANDY: (raises fists) OK, it's GO TIME!
MOPARHOLIC: Uh, OK, I'll meet you at the Wendy's out by the highway.
TIM NEBO: Somebody hand me that propane soldering torch.
TWISTEDHED: Oh thank God someone's got their mind on the project.
TIM NEBO: What project? We're fucked. I'm lightin up a bowl of bud.

HOST: Now let's look at how the Pink Team is doing with the same challenge.

The PINK TEAM is hard at work.

LANDSHARK: (swooning) Stranded on a deserted island with five, brutish, hairy, muscular MEN. Oh! I'm in absolute HEAVEN! I hope we NEVER leave!
BRAINBUSTER: Sod off y'goddamn poofter. I say, can anyone make any sense out of this pile of cast-off junk?
JEFF MAYNER: I'm just a keyclown. I don't know how stuff works.
BRAINBUSTER: Drat, and I failed my basic electrics course at Birmingham Grammar. I can't make heads nor tails of it either.
TRAIN: OK you pathetic fuckwads, listen up. Jay and I know this shit inside out. We do this for a living. Everybody just stand back and let us get to work.
JAY: Damn straight, we'll be on that boat havin us a round of ice colds and huggin on a coupla honeys in no time.

3 HOURS LATER....

TRAIN: Done!
JAY: Woo hoo! And it's a right FINE lookin linear if I do say so myself.
JEFF MAYNER: Hooray!
TRAIN: Heh heh. This thing'll do 500 bird watts!
BRAINBUSTER: You've done it, lads! You've done it!
ALL: (CHEERING)
LANDSHARK: Excuse me, I don't mean to be a downer, but how are you going to signal the Navy ship with a linear amp? I mean, don't you need something to drive it with?
TRAIN: Well uh, what you're talkin about is a transmitter. I don't know nuthin about buildin that.
JAY: Yeah. All we knows is linears.
TRAIN: And we built us a fine one.
JAY: Yes we did, by gawd.
JEFF MAYNER: Hey, even if we did build a transmitter, what would we use for an antenna? There's no Radio Shack store on the island.
JAY: There ain't even no aluminum rods to build us a Super Penetrator Gizmotchy.
TRAIN: Just piles of this lousy #18 wire.
BRAINBUSTER: Looks like we're stuck here.
LANDSHARK: Oh pinch me....I'm DREAMING!
TRAIN: (flies into a rage) Goddamn it...goddamn it...GODDAMN IT!!!!

TRAIN pounds violently on the linear with his fists. Inside the chassis, circuits short out. SPARKS FLY. BZZT! BZZT! BZZT!

CUT TO: the SHIP'S RADIO SHACK. Faint but distinct BUZZING is coming out of the headphones -- it's a SPARK SIGNAL created by Train's pounding! But DICK doesn't hear it. He's thoroughly shitfaced, dead drunk, lying among a pile of empty beer cans.

HOST: Oh, bad luck. It looks like neither team has completed the challenge, so both will remain on the island without food and water. Stay tuned, there's lots more action coming up on....SURVIVOR - KEYCLOWN STYLE!

It has been done and more or less worked. The problem is that any simple probe or antenna does not have uniform impedence along its length, the tip is always a voltage node and for betting purposes can be taken as give or take 2000 ohms where the current node a quarter wave down on a whip is about 34 (lower on loaded antennas) so you never have a real match to the universe. But losses in air are pretty minimal and generally aren't worth fixing. The one antenna I saw that was a pretty uniform 370 or so but had a number of caps along its length. It was about twice the size of a regular dipole and a mechanical nitemare.

It is one reason a lot of people find loops and folded dipoles of great interest.

Hi,

Can anyone give me any feedback on this antenna. I know the 4000 would probably be better, I just couldn't have a 7 foot antenna on my car:-)

Thanks in adavnce.

I'll do you one better. Let's turn the clock back to 1975, when CB was still a fun place to be, for both adults AND kids. Where the band has not yet been overrun by foul-mouthed, power-hungry, sociopathic, idiots, running echo mikes, and noise boxes that splatter dozens of channels, while spewing language and banter that would not be fit for another sane person.

Funny that you mention the Cobra 148GTL DX+ being a "mistaken" order.
I too have also heard that Cobra had ordered the initial run, changed
their mind AFTER the initial run was actually manufactured, and was
quite p/o'd that the batch was sold to retailers anyway. Which is why
the boxes, serial no. plates/stickers, and documentation look so
authentic. I bought one, added the Channel Guard and SP-1a, along with
the rest of the Panther upgrade kit. It occasionally pulls 10-meter
duty now. If you can get your hands on one, KEEP IT! I saw one on ebay
not too long ago. I didn't follow its progress since I have a NIB one,
but they can be had.

I comprehend just fine. No one EVER stated that a ham license was a "holy grail" or a "Shrine". Those are words that YOU chose to apply to it. This is further evidence of how you look at things, and not how they actually are.

> You are the one that claimed you were above and better than others
> because of your license.......deal with your biases instead of trying to
> foster them on others..

I NEVER claimed to be "better" than anyone due to my license. However, I did take the time and effort to obtain it, rather than thinking up a hundred excuses why I don't really want or need it.

It makes no logical sense for someone, who is truly interested in radio, to not get a ham license, especially if, as you claim, it's no work, and is as easy as falling out of bed to get. If nothing else, you can frame it and use it for dart practice. But to say on one hand that a ham license is not worth anything, because there is no work involved, and on the other refuse to get one is a nonsensical contradiction. You may have a beef with some ham operators, but the extra bands and modes that you gain can far offset any prejudices (perceived or otherwise). There are many "stuffed shirt" hams that I don't care for. But there are so many neat bands to play on, that I rarely run across them.

So what's your REAL excuse? Why turn down an "easy" path to increased radio potential?

>
> >A ham license is something you have to expend some effort obtaining, so

It was an accomplishment. Not that I need much theory, due to my
background in electronics, but getting over the morse hurdle required
some effort. Effort that you can't seem to overcome.

> >"Work" is a relative term. It is still an accurate description of what

> most, but, once again, congratulations on accomplishing something that
> is not considered by most to be the challenge that it apparently was for
> you.

And who are these "most" people that you are attempting to speak for?
Funny, "most" people that I am in contact with consider a ham license to
be a formidable challenge. Some so much so that they cheated to get one.

No, the truth is that YOU don't consider it work, and YOU don't consider
it an accomplishment, because YOU have a problem with it, most likely
because YOU can't expend the effort to get one. Which is why you sit on
the illegal freeband, pretending to be a ham wannabe, while all the
really good DX excapes you on the real ham bands.

> >(Even though the tests have gotten pitifully easier in recent years),<<
>
> Here you contradict youself. You claim these tests are quite an

> easier" the tests have become...lemme guess...since YOU got yours,
> correct?

The tests have gotten easier. That is a fact. And yes, in the 20 years
since I've taken my test, the whole process has gotten easier. When I
took my test, I had to do it in an FCC field office. For many people,
finding one local to them was a challenge in itself. I was fortunate in
that respect. So how's that a contradiction?

>
> >That may be true, but it doesn't explain why a person that has the

> in the deity-like position that you do.

And again for those slow brain cells of yours, I don't hold a ham
license in a "deity-like" position. But it is a permit to allow me to
use many more bands and modes than a no-license, know-nothing band like
CB allows.

>
>
> >And even if you don't feel that this is a valid claim, it is still one

> The problem lays only with your dissatisfaction in your ability to make
> others think that it actually carried the weight you attribute it.

The mere mention of ham licenses and their value and accomplishment brings about a barrage of negative descriptions from you. In other words, you protest too much to make a convincing arguement that it really doesn't bother you. In fact I am convinced of just the opposite.

You failed to pass the ham tests (If you even bothered to take them), so you now downplay and denigrate all those that have achieved what you are incapable of, as well as the value and priviledge that holding a ham license conveys to the user. You then twist it around by attempting to accuse license holders of exhibiting dellusions of godhood, when in reality it is your failure to achieve the same level, that is the focal point of your anger and disenfranchisement.

Laugh, say what you will, but reading between your lines tells more of a story than what you actually state, and should be obvious to anyone reading this.

>
> >fits the classic mold of someone who cannot achieve so they downplay

But it's ok for you to insult ham license holders by accusing them of acting like "gods"? You are so much the hypocrite, it's not even funny anymore.

Something tells me that running a "legal" radio is not in Tim's dreams. As
for the 3CX3K tube, the Svetlana 3CX3000A7 is designed for use in zero-bias,
class AB, or class B RF or audio amplifier so Spanky's Class "C" mode of
operation is a mute point.
I must say I like the idea of a tube with handles and the 3K falls a little
short. The 3CX10000A7 fits into my idea of a tube with handles nicely!

After they stopped using Uniden exclusively, some of their radios were/are indeed manufactured by Ranger using Uniden-clone boards. The newer 148GTL is manufactured in their Malaysia plant right alongside the Galaxy line. I'm not so sure that the quality control at the Malaysia plant is as good as the Taiwan R.O.C. plant.

O
>Funny that you mention the Cobra 148GTL DX+ being a "mistaken" order.
>I too have also heard that Cobra had ordered the initial run,

Well, The real story is....

A CB Dealer in Germany wanted to market a "export" radio of thier
own....

Mr. Peng (remember him?) said sure no problem! Just me give half of
the money to start production. and the Idea of the Cobra 148 F DX +
was born... Well, as luck would have it, When the Case lot of made,
Mr. German Dealer said, Uhhhhh... I don't got the money. and Mr. Peng
contacted a very good freind of his in California and said....
Uhhhh... Can you sell these for me???? They said yes, trouble is,
nobody bothered to inform Cobra USA about it... and that's why it was
renamed to the Connex 4800 DXL.

Take care peeps...

We have learned it quite well, only your type whines and bitches when we play it. We didn't design the system, we just play it the way it was designed, and instead of taking your beef to the folks responsible you cry to the players, which is why you accomplish zip.

>The government needs an occasional kick in >it's judicial ass, but most of the time it's not >worth the fight.

Of course not, you would much rather take it out on the little people under the umbrella of the designed system.

>And it's a very good idea to learn the ropes >just in case you find yourself on the receiving >end of some legal interference.

I think it's safe to say most of us present understand the law much better than you.....after all, none of us have experienced the calamity you frequently claim occurs, but still you continue getting personal and calling names to all those that don't agree with you, preaching fire and brimstone to freebanders and amp owners.

>The Lone Gunmen, R.I.P.

> Good thought, Doc. Bert, listen to the man

Yeah, I might just do that. I'll be clearing some trees off my property soon, but I'll leave the corners intact. I didn't realize how expensive it is to have trees cleared. I think that I can get this sucker up at about the 60' to 70' level. (Out comes the slingshot and lead fishing sinker.) I'm probably going to build a 2-meter omni so I can keep in contact with the Mrs., (Cringing, Dick?) who'll be running about 50 watts simplex from her mobile. Sorry, repeaters will be a last resort. I came, I listened, I left. Repeater life just ain't for me...and my XYL knows NEVER to tell me that she's "destinated." <ggg>

But perhaps the doublet or loop can pull all HF duty, including 11-meters? That's be pretty cool. (Maybe I'll even run into another purist in Radio Shack who will lambaste me for committing RF sacrilege. <ggg>) I do have an itch to get one of those Interceptor I-10K 5/8 ground planes for local use though. Dunno yet?! Doc, I am rethinking the antenna switch to tuner cinfiguration. Although I plan on transmitting when the switch is in the common position, better safe than sorry. Shame though, since I already have the switch. Thanks for the advice.

>I comprehend just fine. No one EVER stated >that a ham license was a "holy grail" or a >"Shrine". Those are words that YOU chose to >apply to it.<

No, I never said they were...read it again, s-l-o-w-l-y, or get an educated hammie to assist.

>This is further evidence of how you >look at >things, and not how they actually are.<

Evidence? You are one funny dude, even if you are always angry.You are correct..they are far from that.

You are the one that claimed you were above and better than others because of your license.......deal with your biases instead of trying to foster them on others..

>I NEVER claimed to be "better" than anyone >due to my license<

"..it is still one
better than what a CBer has, which is NOTHING..."

Misquotes, comprehension problems, memory problems...I can almost make the diagnose from where I sit.............

>It makes no logical sense for someone,<

You don't deal in logic, only innuendo and bullshit.

>who is truly interested in radio, to not get a >ham license, especially if, as you claim, it's no >work, and is as easy as falling out of bed to >get. <

LMAO! Gradeschool leve, fright and banter.....
Interpretation: I can't understand, so it don't make sense..
I know your type.....the "If I can't work it, it must be broke".types.
Ye of fractured ego....

>If nothing else, you can frame it and use it for >dart practice. But to say on one hand that a >ham license is not worth anything, because >there is no work involved, and on the other >refuse to get one is a nonsensical >contradiction.<

Put in context instead of your failed attempt at slanted innuendo,,,,that isn't what happened...you began spouting what an accomplishmed feat it was and I merely pointed out it really isn't, which upset you greatly.

>You may have a beef with some ham operators,<

Only those who feel they have the right to tell me how to operate, and that isn't limited to hammies, butyour repeated failed attempts at trying to make it appear as if I have problems with hammies is duly noted.

>but the extra bands and modes that you gain >can far offset any prejudices (perceived or >otherwise).<

Not true at all. You already claimed you are better than cbers, your prejudices are readily apparent for all to see.

>There are many "stuffed shirt" hams that I >don't care for.

The obligatory back-pedal, the cool down.....

>But there are so many neat bands to play on, >that I rarely run across them.
>So what's your REAL excuse? Why turn down >an "easy" path to increased radio potential?<

And this is what kills you...that there is no need to justify anything to you ,,,, only your limited scope and preconceived notions prevent you from comprehending.

>A ham license is something you have to >expend some effort obtaining, so
>it does hold some intrinsic value, despite what >your bias is telling you.<<

Intrinisic value? (Chuckle)
What I find more entertaining is the mere thought that you continue to hold the license as some kind of accomplishment...maybe I'm giving you too much credit, it probably WAS an incredible feat for you. In that case, congratulations.

>It was an accomplishment.<

Fine, you feel it an accomplishment, again, congratulations...but you need to get over yourself and the fact not everyone sees it the way you do. Only then will you be able to relax.....

>Not that I need much theory, due to my background in electronics, but getting over the morse hurdle required some effort. Effort that you can't seem to overcome.<<<

Interpretation: I can't understand, so you are wrong. Get real!

>"Work" is a relative term. It is still an accurate description of what you have to do to obtain the license. It might be easy work, or hard work depending on the person. But it is still work, which is still more than you have to do to operate a CB, which is buy on at your local "Radios R Us"<<

Really stepped in this time with your comment about being "better" than everyone else, didn't you? Most do not consider "work" relative, such as you are attempting to with the back-pedal.

Work is usually associated with a certain amount of effort/and or exertion put forth to accomplish a given task....again..the gateway to being licensed is not considered much of an accomplishment or effort to most, but, once again, congratulations on accomplishing something that is not considered by most to be the challenge that it apparently was for you.

>And who are these "most" people that you are attempting to speak for?<<

The hammies present on this board. I am in ouh wih several on a semi-regular basis and none of them are as anal as you concering a license.

>Funny, "most" people that I am in contact with consider a ham license to be a formidable challenge. Some so much so that they cheated to get one.<<

You are in a cb forum where the license means agrea deal more to you than the rest. I suggest you learn to deal with it.

>No, the truth is that YOU don't consider it work, and YOU don't consider it an accomplishment, because YOU have a problem with it,<<

No, I don't. (Innuendo again noted), unless it i thrown at me by someone such as yourself who thinks it somehow makes them "BETTer".

>most likely because YOU can't expend the >effort to get one. Which is why you sit on the >illegal freeband, pretending to be a ham >wannabe, while all the really good DX >excapes you on the real ham bands.<

Ignorance is bliss to you.

>(Even though the tests have gotten pitifully easier in recent years),<<

Here you contradict youself. You claim these tests are quite an accomplishment for you, then you turn around and lament how "pitifully easier" the tests have become...lemme guess...since YOU got yours, correct?

>The tests have gotten easier. That is a fact. >And yes, in the 20 years since I've taken my >test, the whole process has gotten easier.

War story mode engaged:

>When I took my test, I had to do it in an FCC >field office. For many people, finding one local >to them was a challenge in itself. I was >fortunate in that respect. So how's that a >contradiction? <

Hint: Obtain literate hammie for assistance.

>That may be true, but it doesn't explain why a >person that has the >knowlege to gain a ham license, would not do >so, just to say "I did it" if for no other reason.<<
Explain to who? Apparently, you feel you are entitled to an explanation of why everyone who is the slightest bit interested in radio comms

doesn't get a license. I'll tell you again.....most don't hold the thing in the deity-like position that you do.

>And again for those slow brain cells<

That's what I was seeking...absolute confirmation.

>of yours, I >don't hold a ham license in a >"deity-like" >position. But it is a permit to allow >me to use many more bands and modes than >a no-license, know-nothing band like CB >allows.

So you hate cb and you are here to agitate...big deal...you'reone in a million, and not very good at even that.

>And even if you don't feel that this is a valid claim, it is still one better than what a CBer has, which is NOTHING.<<

Ha ha! You assume way too much. You have no clue if a cber has a license or not.

>Since the CB license was abolished by the FCC some 20 years ago, I can say with some certainty that the CBer has no license.<<

Reading that line today I am certain you can see how you apparently neglected to think about what you were going to say prior to actually posting it.

>How's that? There is no CB license. Where >have you been? So how can a "CBer" have a >license?<

In your original line you did not specify a cb license. Many cbers hold hammie licenses.

And you accuse ME of having a problem comprehending.....
  it fails to make you "better" somehow, because you hold a license....I'm still laughing at that....that mindset is the epitome of the problem between cbers and hammies, and you shrug your shoulders and point fingers to others when your actions based on your mistaken thoughts and interpretations are flawed.

>Like it or not, hams have something that you don't.>>

Not at all. I never looked at it that way at all. Only your type seems preoccupied with "like or dislike" of a license. It doesn't mean squat here, and damn sure doesn't make you any better than another,,,,that comment speaks for itself concerning your disposition.

The fact that you react so predictably negative<<

Where did I react negatively? Quote it.

The problem lays only with your dissatisfaction in your ability to make others think that it actually carried the weight you attribute it.

>The mere mention of ham licenses and their >value and accomplishment brings about a >barrage of negative descriptions from you.<

Innuendo didn' twork so you resort to lies...like all dogs...

>In other words, you protest too much<

I don't protest at all.

>to make a convincing arguement that it really >doesn't bother you. In fact I am convinced of >just the opposite. <

I hope we can all sleep knowing you are convinced.

>You failed to pass the ham tests<<

ROFLMAO! Now others are aware of your ignorant bliss.

>(If you even bothered to take them), so you >now downplay and denigrate all those <

Never anyone but you, but carry on...when I have reduced someone like yourself to making personal untrues of that of who you are engaged speaking, it tells all exactly what we need to know.

>that have achieved what you are incapable of, >as well as the value and priviledge that >holding a ham license conveys to the user. >You then twist it around by attempting to >accuse license holders

Just those whofeel they are "above" Others because of it.

>of exhibiting dellusions of godhood, when in >reality it is your failure to achieve the same >level,<

Reality is detached from you.

> that is the focal point of your anger and<

Only itis you that is angry.....you said it "vehemently",,,,remember?

>Laugh<

I shall.

>, say what you will, but reading between your lines tells more of a story than what you actually state, and should be obvious to anyone reading this.<

Obvious in the same manner you can't comprehend why anyone should get a license?

>fits the classic mold<

Not everything is pigeonholed foryou,,,that appears to cornfuse you.

>of someone who cannot achieve so they >downplay<

OR someone who is no one inreal life so this is how you make yourself feel worthy....

>t\he significance of that achievement.<<

Wouldn't be anything to downplay i f you didn't "UPPlay" it.

Of course, your insults couldnt have been far behind. All your type are so predictable. You can't carry on a decent conversation without upsetting yourselves and resorting to personal insults.

>But it's ok for you to insult ham license holders by accusing them of acting like "gods"?<

I insulted no one that did not insult me. Please do not present yourself indicative of all license holders...most are way more astute than yourself and have no need to mention what their license means to others,,as most don' give a hoot what another cares or thinks,,but mos don't act like you.

>You are so much the hypocrite, it's not even >>Dave "Sandbagger"

Killfile me like 'RANDy" did, then you too can carry on in ostrich-like existence and you won't have toworry about twisty upsettin gyou and poining out your bullshit.

Ways to tell when food is spoiled...

EGGS
When something starts pecking its way out of the shell, the egg is probably past its prime.

DAIRY PRODUCTS
Milk is spoiled when it starts to look like yogurt. Yogurt is spoiled when it starts to look like cottage cheese. Cottage cheese is spoiled when it starts to look like regular cheese.
Regular cheese is nothing but spoiled milk anyway and can't get any more spoiled than it is already.

MEAT
If opening the refrigerator door causes stray animals from a three-block radius to congregate outside your house, the meat is spoiled.

BREAD
Sesame seeds and Poppy seeds are the only officially acceptable "spots" that should be seen on the surface of any loaf of bread. Fuzzy and hairy looking white or green growth areas are a good indication that your bread has turned into a pharmaceutical laboratory experiment.

LETTUCE
Lettuce is spoiled when you can't get it off the bottom of the vegetable crisper without cleanser.

CANNED GOODS
Any canned goods that have become the size or shape of a football should be disposed of. Carefully.

CARROTS
A carrot that you can tie into a knot is not fresh.

POTATOES
Fresh potatoes do not have roots, branches, or dense, leafy undergrowth.

EMPTY CONTAINERS
Putting empty containers back into the refrigerator is an old trick, but it only works if you have a wife.

UNMARKED ITEMS
Generally speaking, Tupperware containers should not "burp" when you open them.

GENERAL RULE OF THUMB
Most food cannot be kept longer than the average life span of a
hamster.
Keep a hamster in your refrigerator to gauge this.

lol, Betty.

2084. How to take a shower (OT)

Newsgroup: rec.radio.cb
Date: 2002-04-22 19:44:25 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <uKZw8.890$a3.113473@cletus.bright.net>
Source record: 121948

HOW TO SHOWER LIKE A WOMAN:

Take off clothing and place in sectioned laundry
hamper according to lights and darks. Walk to
bathroom wearing long dressing gown. If you see
husband along the way, cover any exposed areas.
Look at your womanly physique in mirror - make
mental note to do situps. Get in shower. Use
face cloth, arm cloth, leg cloth, long loofah,
wide loofah and pumice stone; Wash hair with
Cucumber and Sage shampoo with 43 added vitamins.
Wash hair again to make sure it's clean; Condition
hair with Grapefruit Mint conditioner enhanced
with natural avocado oil. Leave on hair for 15
minutes. Wash entire body with Ginger Nut and
Jaffa Cake body wash. Wash face with crushed
apricot facial scrub for ten minutes until beet red.
Rinse conditioner off hair, and make sure it is
completely off! Shave armpits and legs. Scream
loudly when husband flushes toilet causing
loss in water pressure. Turn off shower.
Squeegee of all wet surfaces in shower. Spray mold
spots with Tilex. Get out of shower and dry with
towel the size of a small country. Wrap hair in
super absorbent second towel. Check entire body
for remote zits and tweezable hairs. Return to
bedroom wearing long dressing gown and towel on
head. If you see husband along the way, cover
up any exposed areas and sashay to bedroom.
Spend 1 1/2 hours getting dressed.

HOW TO SHOWER LIKE A MAN:

Take clothes off while sitting on edge of bed.
Leave clothes in pile. Walk naked to bathroom.
If you see wife along the way, shake weiner at her
and make "woo woo" sound. Look at manly physique
in mirror and suck in gut to see if you have pects.
Admire size of weiner in mirror and scratch
butt. Get in shower. Do NOT look for washcloth.
You do not use one. Wash body with hands. Wash
armpits with hands. Blow nose in hands and
let water wash off any snot. Wash privates and
butt with hands for at least 10 to 15 minutes.
Wash face with hands. Laugh loudly at how loud

your fart sounded in enclosed shower area.
Leave coarse butt hairs on soap bar. Shampoo hair.
Do NOT use conditioner! Make shampoo hair mohawk.
Peek out of shower curtain to look in mirror.
Pee. Rinse off and get out of shower. Ignore water
on floor due to failure to put shower curtain
INSIDE the tub perimeter. Leave shower curtain
open and wet bathmat on floor. Leave bathroom
light and fan on. Return to bedroom with towel
around waist. If you pass wife, pull off towel,
shake weiner at her and make "woo woo" sound again.
Throw wet towel on bed. Get dressed in 2 minutes.

2085. Nudist Colony (OT)

Newsgroup: rec.radio.cb
Date: 2002-04-22 19:56:46 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <0WZw8.891$a3.113587@cletus.bright.net>
Source record: 121949

A man joins a very exclusive nudist colony. On his first day there he takes off his clothes and starts to wander around. A gorgeous petite blonde walks by and the man immediately gets an erection. The woman notices his erection, comes over to him and says "Sir, did you call for me?" The man replies, "No, what do you mean?"

She says, "You must be new here, let me explain. It's a rule here that if you get an erection, it implies you called for me." Smiling she leads him to the side of the swimming pool, lies down on a towel, eagerly pulls him to her and happily lets him have his way with her.

The man continued to explore the colony's facilities. He enters the sauna and as he sat down he farted. Within a few minutes a huge, obese, hairy man lumbers out of the steam toward him. "Did you call for me?" says the hairy man. "No, what do you mean?" says the newcomer.

"You must be new here," says the hairy man, "it's a rule here that if you fart, it implies that you called for me." The huge man easily spins him around, bends him over a bench and has his way with him.

The newcomer staggers back to the colony office, where he is greeted by the smiling, naked receptionist. "May I help you?" she says. The man yells, "Here is my membership card, you can have the key back, and you can keep the $500 membership fee."

"But sir," she replies, "you've only been here for a few hours, you haven't even had the chance to see all our facilities." The man replies, "Listen lady, I'm 58 years old; I get a hard-on once a month, but I fart 15 times a day."

How would that happen "accidently"? Like, you "accidently" snipped your limiter, or you took your radio to the shop to be peaked "accidently"?

Can anyone give me some links to some popular CB oriented bulletin boards? Preferably ones with organized sections and threads that use a decent bulletin board software package like vBulletin, not one of those garbage list types.

All the ones I have found by myself have maybe 20 users and no structure.

Thanks,
Mark

What? New hams are actually worth something?

Are new hams worth more or less than old hams? Or should that question be under the subject line discussing spoiled food?

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

> ||||||||||||||||||||||||||||||||||

I took a look.

As far as kits go, I'd say it's a 7 on a 1-10 scale.
Some explanation of the theory would make it
much better. People aren't going to build the kit
just for the Hell of it--they want to learn something.
Unless the kit is much less expensive, a Texas
Star 350 or a Blue Face XL-350 is a better deal
when one factors in the time spent and the features
offered.

It looks like you make a big thing out of setting the
bias. It would be just as easy and make more sense
if you had the builder leave the collector leaves un-
soldered. You could have the builder temporarily
attach a wire between the two collectors and another
wire to one of the collector solder pads. Then you
could have them attach a milliamp meter and set
the bias more precisely. You could offer them the
choice of cold AB2 (the B-E junctions always draw
current, so it's not AB1) bias or (my preference)
cold B bias (which becomes AB2 as the devices
heat up when the bias is fixed).

In conclusion, it seems as though your product
presentation has improved, but the product itself
hasn't. Going with 2879s and ending up with a
reasonably efficient design that is stable with a
decent gain figure is an improvement. However,
on the other hand, staying with the feature sparce,
3-sided lid, fins up, 2-pill design shows a severe
lack of confidence and creativity. These days,
with the radios making as much power as they
do, and the higher interference levels, a 4-pill is
a much more appropriate entry-level amp choice.

39 channels? hell, I thought we had 79 others (20 above and 20 below).
triple nickel all the way!

true, i guess that does make it about right at about 500 or so. i think it also has the cw filter which mine did not so thats a plus too. i liked the power supply i had better though because its smaller. the way i have my station setup all that is exposed is the radio, mic, and swr meter. the wiring is hiden and the power supply and solid state amp kept underneath. its a very clean setup thats just sat on a night stand next to my bed. i never was one that liked a big full bench in front of me. looks too tacky to me.

Correct,
I really disagreed with the 1/4 wave statement you made,
and you disagreed with mine, but it ended with a half
dozen, give or take smart assed posts. But nothing like
the BS that's posted now. I still don't agree with what
Brian feels about the 1/4 wave, but we can both agree
that what a couple of trolls spew here, have no value at
all, except for self-gratification.

Landshark

Since you are referring to running a transistor AB2 one must conclude
that you think it's possible to run it AB1. So just how do you run AB1
with a transistor, Bill?

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl

then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

2115. History repeats itself, this time Digitally!

It takes far more than your feeble comprehensive and cognitave abilities
to "rattle" me. Like I said before, you make the perfect newsgroup punch
clown. No matter how many points someone makes, you still find a way to
obfuscate and twist them into some sort of alternative reality, where
you are king and the rest of the world are but small furry creatures.
Drugs will do that to you, or was it the "Saucer men"?

You are entertaining, but only to a point.....

Dave

Although this newsgroup seems to be a compendium of jokes and insults I thought I should try to ask an on-topic question.

I have read a lot of stuff online about antennas lately, with the best info at Firestik's website, Alf Enterprises and a few others. However my question is not directly answered by reading these sites.

I have a Nissan Pathfinder with the external tire carrier. I have thought about installing a permanent middle of the roof antenna, but for numerous reasons decided against it. So I am leaning towards mounting a 4 ft Firestik II directly in front of the spare tire on the swinging gate. This will result in approx.17" below the roofline, and 31" above. I read that you want 60% of the antenna above the roof, so this would be about right (64.6%).

My question - is this the kind of application that I would be better off buying a No Ground Plane antenna kit? Grounding would not be an issue with the tire carrier, so my concern is merely with the carrier wave emissions properties. On all the websites where people have shown their tire carrier installations (Pathfinders and Jeep Cherokees) no-one mentions whether they are using NGP antennas.

And as a second question, where are the best prices on Firestik kits online? Would Firestik be the best choice, or is another brand preferable (Wilson, Cobra etc)

Thanks,
Mark

You couldn't find your own butt with both hands, let alone design
anything.

> we just play it the way it was designed, and instead of taking your beef to the
> folks responsible you cry to the players, which is why you accomplish zip.

There you go with the "we" stuff again. You're hardly in any position to
"play" anything. An illegal radio operator has no business preaching
radio law to anyone.

If they're the ones breaking the law, then they're the ones that deserve
to be prosecuted by it, not the innocent operators that get caught up in
the loopholes of a poorly written local law.

>

Source record: 121987

N.G.P. antennas have a very narrow bandwidth, these antennas are for used
when nothing else will work.
They supply their own ground plane, hence the term N.G.P.
The spare tire rack may work if there is substantial metal on the unit.
Do not mount the antenna on the rack where it has to ground thru the hinge,
this would be swr headache.
I prefer 90% of the antenna above the roof, lord knows i don't want to block
any signals........
USE GOOD COAX.
I like "Times" coax for their high v/f, low attenuation and high shielding.
Use enough coax to reach from the radio to thew antenna,length only matters
if you have a high attenuation factor in the coax..............
Forget about using your SWR meter to tune the antenna, take it to a radio
shop and pay $10. bucks to have it tuned using a analyser {MFJ}.
My favorite antenna is the Firestik FSII, it's a variable-pitch,wire-wound,
top-loaded 5/8~ w/a tune-able tip.
I picked 2 s-units just bolting it on.
I believe the variable-pitch is what really makes it shine.
Now that's a meatball

>There you go with the "we" stuff again. You're hardly in any position to "play" anything. An illegal radio operator has no business preaching radio law to anyone.<<

I have every right that any other citizen has to preach what whatever I want, you commie!

The government needs an occasional kick in >it's judicial ass, but most of the time it's not >worth the fight.

Of course not, you would much rather take it out on the little people under the umbrella of the designed system.

>If they're the ones breaking the law, then they're the ones that deserve to be prosecuted by it,<<

Yup, but you ain't "IT", just a wannabe enforcer that feels he is better than cbers.

>not the innocent operators that get caught up in the loopholes of a poorly written local law.<<

I suppose you have an example?

>And it's a very good idea to learn the ropes just in case you find yourself on the receiving end of some legal interference.<<

I think it's safe to say most of us present understand the law much better than you.....

>Yep, you're a legend in your own mind.......<<

Your interpretation of us understanding the law better than Sparky is readily flawed, there is no need for you to share your ignorance further, unless you take some weird pleasure in it. However, a guilty pleasure is derived from watching you stumble, fall, froth at the mouth, call names, hurl insults, and get personal.

after all, none of us have experienced the calamity you frequently claim occurs, but still you continue getting personal and calling names to all those that don't agree with you, preaching fire and brimstone to freebanders and amp owners.

>And you seem to feel that the local powers that be, will be targeting ham operators,<<

Well, hell's bells. You established yourself an accomplished and habitual liar with no interference from nary a soul.

>while ignoring the much greater problem of illegal CB pirates.<<

And that just chaps your pretty pink skirt.
It's not a problem except to anal retentive types like yourself, unless you count ten meter intruders..so go ahead and get it off your hairless chest and accuse me of doing that as well..
Illegal cbers don;t bother me in the way Sparky claimed they affected his work (How did they do that again?). I

> And you talk about ignorance being bliss..... <<

Yes, I do. You sit here and make all kinds of lies and accusations..most are baseless and figments of your volatile psyche.....you call nameless, faceless, people criminals based on their posts and opinions, nothing more....there may not exist a linear among the bunch of us,,we could all take some weird pleasure in pissing you pink skirts off talking about linears and freebanding and not do it at all...and then we have the losers, the pinkos like yourself that get all hot and bothered when usenet performance art backfires in your feminine face. Considering the source of the few who use the term "keyclown"., I am damn proud to be considered one...anything that indicates the most opposite from those that use the term is what I want to be.. How does it feel now that that long-overdue revelation finally made you aware that you are not a spectator?

FA - 2 Antron style antennas new in box. The paperwork from the others I bought in this lot said - Antron! Both are still under $30!

Anyway, I have a missing link so - I can't provide a link. My apologies for the inconvenience. They are both listed though under the Antron header. Both have my name in the ad, as I list herein. IF you choose to bid, thanks in advance.

These are the last two of the lot I had, would love to clear em out.

Hi Andy

Thanks for the reply.

I understand the limits on a rear mount WRT directional signal etc, but as compromises go that won't be too bad. On the road I will be more interested in what is ahead than what is behind anyway.

With the 5' length you recommend I would have to use a quick disconnect and actually remember to remove it every time I park in our garage. Is this practical?

An installation question: once I install the antenna should I seal the coax connection at the base of the antenna with some kind of tape?

Thanks,
Mark

it has nothing to do with the power supplies you dumb ass. it has to do with the fact that the normal ac mobile amp puts out WAY more RF than the dc amps. the biggest normal dc amp is a 8 or a 16 pill which isnt too many watts. the average ac amp is at least a 3cx3000 putting out 5-15kw. not too mention the xtra risk to the ignorant who might stick there hand in there.

"Densly populated"? Where does that 'density' come from, Tim? If you run 400 watts then you are making a contribution to the interference that is equivalent to 100 CBers, huh? The point is that the solar interference is aggravated by dopes like you running power. You were thinking of the right words but just got them mixed up: you should have said, "...your ham bands would sound the same way if they were populated with people as dense as me."

>thought about installing a permanent middle of the roof antenna, but for
>numerous reasons decided against it.

Too bad, it's the best location. If you are worried about resale
value, don't worry too much: just use a chrome hole-plug and most
people won't even notice. If the metal is too thin, just add a sheet
of steel below it. The antenna doesn't need to be permanently
attached, you can unscrew it when it's not being used, or you can get
a quick-disconnect mount. If garage clearance is a problem, you can
get a hinged mount.

Just some things you may not have thought about...

sparky if it is us the cb'ers causing it why is it that the interference and noise level also dies with the dx at night? there are more cb'ers than hams and we only have 40 channels. if everybody in the usa only ran four watts we would still all interfere with each other. i've worked barefoot stations in skipland that were higher than a s9 the entire time. are you saying that they wouldnt cause a problem to my local comms because they were barefoot and not running an amp?

I didn't say "causing", I said "aggravating"; and I didn't say "cb'ers", I said "dopes like you running power". Regardless, most people sleep at night, so it's kind of obvious that activity will drop off then.

> there are more cb'ers than hams and >we only have 40 channels. if everybody in the usa only ran four watts we would >still all interfere with each other.

But not NEARLY as much.

> i've worked barefoot stations in skipland >that were higher than a s9 the entire time. are you saying that they wouldnt >cause a problem to my local comms because they were barefoot and not running an >amp?

Gee Tim, how often does that happen compared to Peter Powerhead down the road yelling, "WORLDWIDE...WORLDWIDE!!!" into five channels? Not very often. It would probably happen -more often- without all the amps interfering locally, don't ya think? Got any more lame excuses?

no i dont, people running amps locally have zero affect on the signal level of dx stations.

>It would probably happen -more often- without all the amps
>interfering locally, don't ya think?

it happens everyday sparky. the dx has been good for a couple years now. listen on 38lsb. a majority of those guys run legal stations and there s9 plus all day long.

>Gee Tim, how often does that happen compared to Peter Powerhead down
>the road yelling,

how do you know sparky? again it is the skip conditions that are causing the trouble not the amps. were you on the cb during the solar low last go around sparky? the radio was dead except local signals. no interference, no noise levels, nothing and it stayed like that until the dx came back again.

>
>> there are more cb'ers than hams and
>>we only have 40 channels. if everybody in the usa only ran four watts we
>would
>>still all interfere with each other.

thats right you didnt say causing because it is not the cause of it like you would have us percieve it to be. if everybody in the world stopped using amps it wouldnt go away. 4 watts into a decent antenna is plenty to work the entire world with the band open as strong as 27 megs usually is.

>I didn't say "causing", I said "aggravating"; and I didn't say
>"cb'ers"

thats right most people are asleep but the truckers are always on the streets and rachet jawing on the cb with there texas stars and the likes that you consider to be so evil.

>I said "dopes like you running power". Regardless, most
>people sleep at night, so it's kind of obvious that activity will drop

i live here less than one mile and in direct vision of I-45 which is the only viable route for trucks moving things into and out of the ports of galveston and texas city which are two of the largest in the country. we see thousands of big rigs go by here everyday. it is VERY rare that i have any problems at all. if you run good gear with some channel rejection you wont have any problems. the only thing that ever happens is either over load from trucks when there directly in front of me or from people in dx land. i the last ten years of

talking on the cb i ahvent experienced these excessive problems liek you talk about.

>>interfering locally, don't ya think?
>
>it happens everyday sparky. the dx has been good for a couple years now. listen >on 38lsb. a majority of those guys run legal stations and there s9 plus all day >long.

Must happen just on 38 cause I rarely hear any S9 skip on 39, maybe once a month.

>>Gee Tim, how often does that happen compared to Peter Powerhead down
>>the road yelling,
>
>how do you know sparky? again it is the skip conditions that are causing the >trouble not the amps.

And again you are confusing "cause" with "aggravate". But think about it for a second -- those signals have to come from somewhere, right? Assume, for the sake of argument, that there are 100 CBers in the US. That would pump 400 legal watts into skipland. But if just 10% of them were running 1000 watts, then there is 10,360 watts of interference for the DXer's to deal with. That's 26 times as much noise because a few assholes run linears, and they don't even need that much power because skip is so good. Despite this, they sit on the skip channels and blast away, stepping on any signal DX or local. Not only that, but after playing with the Twisty Buster for a while, I found out that a lot of those DX QSLs are actually local pranksters. So if you want to sit on the word "cause", then yeah, it's the amps that are "causing" most of the crap.

> were you on the cb during the solar low last go around
>sparky?

Yep. As well as the low before that.

> the radio was dead except local signals. no interference, no noise
>levels, nothing and it stayed like that until the dx came back again.

And the last two solar peaks weren't nearly as bad as they are now,
even when the skip conditions were better.

Of course not, when most of the local traffic is on 19 and a couple
overflow channels that DXers avoid. So what does that have to do with
skip? And if skip is as good as you say, why aren't the truckers
constantly getting lost because someone in California is giving
directions to a trucker in Texas? You aren't making any sense, Tim,
but that's normal.

Sparky, most of the incidents you cite are purely your conjecture. Nothing based in fact. As Dick has stated over and over, not all DX is reciprocal in kind or magnitude. Not that I condone major power at all, but you are a little out in left field with this one.

>
> The "evidence" you wish me to respond to is rubbish manufactured by a
> truly desperate and obsessed man, i.e. you.
===

No, they are the headers from an e-mail sent to me and several other
people, and a news message which should still be available on most servers.
So people can see that the IP info is accurate.

As for obsessions, what's it with you and "brummies"... you just can't stop
thinking about them. So obsessed with them that you have to pretend I am
one so that you can psych yourself up ready.
I can just imagine you doing a "Goldberg"... slapping your own face about
before a "battle".

===
> You're reaction to being called a "brummy" was all out of proportion.
===

So you think that the truth is an over-reaction. That explains why the
truth and you are such strangers.
You wouldn't want to over-react and tell the truth.

Your ideas were based on a poor attempt at tracing an IP number. An
attempt that led you to the wrong part of the UK.
You realised that, so you changed your guess to suggest that I "was from
Birmingham at some time"...
Please tell us all about this amazing software that claims to tell you where
a person was born, just using their IP number?

===
> > No, I asked for proof... but you have none, it's all bluff.
> > You cry and make these accusations... prove them.
> > I'm calling it... show us your proof.
>
> YOU know you are a brummie and ashamed of it.
===

That was a quick change of subject... you don't like the subject of proof.

Now, tell us all about that amazing "Birth place tracker" software. You know,
the one that doesn't work.

===
> If you weren't, you wouldn't be flailing so hard.
===

So your idea of logic is that denying something makes it true.
So, if you said that the world was flat, and I said it was not and gave
reasons why... that "denial" would prove your theory to be correct?!
Voobie Loony logic.

Is that "Birth place tracker" available as a free download?

===
> > Not without proof.
>
> What "case"? My dear man, you're barmy as a coockoo.
===

That is not proof, just an over-reaction to a simple request. I must have
struck a nerve.

So, tell us about that "Birth place tracker"... are they planning to fix the
bugs?

==
> What law am I under?
===

American law... The law that says "innocent until proven guilty".
Or hadn't you heard that one?

===
> You seem to have quite a busy life attempting to refute your
> Brummie-ness in this NG :)
===

You didn't actually part with money for that "Birth place tracker", did you?

===
> > I can see that you are on the computer most of the time... and that
> > doesn't include the time you spend reading the messages and
> > searching the net for "keyclowns".
>
> Keeping track of me, eh? Obsessed, eh?
===

I can see how many posts you make to this newsgroup... that's simple
enough to see. I don't know about your posts to other groups unless
they are cross-posted here.

Still wish I was a "brummie", eh? Obsessed, eh?

===
> > > The alias ("aaronnvoobner@yahoo.com) used to promote the
> > > fake web pages was the same one used to spread the virusy download
> > > via email.

> >
> > Look again, the e-mail addy you quote above is not the one "used to

> > Anyway, how do you know what addy was used in an e-mail I received,
> > unless you sent it?
>
> How do you know what addy was used to create the fake web pages,
> unless you created them?
===

I didn't realise that you used an e-mail address to create a web page... I thought you used it to send and receive e-mails... Doh.

Now, if you are asking how I know Jock's e-mail address... it's on his posts (in the headers) and on his site... Doh.
I did say to check the news messages again... Doh.

You cannot see an e-mail address in a header or on a web page... and you expect us to believe that you are the big clever Netcop... LMFAO.

Maybe that "Birth place tracker" will work if you learn to operate it correctly.

==
> > If people check, they will probably find that e-mail came from an
> > american
> > AOL account. Oh, don't tell me, I am now in america... LMFAO.

> > But, Tim admitted that he sent the original to YOU.
> > YOU defended those e-mails, saying that they did not contain a virus.
> > Why, if you did not send them?
>
> Because "aaronnvoobner" emailed one to me, dumbo.
===

Ohhh, I seem to have hit a nerve.... does that show guilt?

===
> > And why are you now saying that they were "virusy", when you said they
> > were not.
>
> Because your fellow keyclowns said they contained a virus.
===

You had already stated that it was not "virusy", so you knew it wasn't, yet you still referred to it as such... Just trolling, eh.

Does that "Birth place tracker" say "made in Birmingham" on it? We all know that "brummies" only know where to find their nearest pub and where to buy a pastie. So the software may be defaulting to Birmingham for all unknown locations (anywhere not in Birmingham).

===
> > But there is doubt, specially as you have proved yourself to be a liar,
> > although your credibilty was so low anyway.
> > And if the e-mails were sent from America, that casts rather serious
> > doubt over that theory.
>
> You might have had Tim send them for you. How should I know who you
> used to accomplish it?
===

Oh, so now you have a conspiracy theory... you really are grasping at straws.
The video was said to be of Tim, Tim admitted sending it to you, Tim already
had a copy, he made it. Why would Tim need me to tell him what to do with
it?
I am quite sure you could soon tell him what to do with it... in no uncertain
terms.

But that still doesn't make me the sender... that makes Tim the sender.
I am not responsible for what Tim does with his computer.

===
> I received several copies of the file in question, from Tim, and from
> your fake accounts.
===

Bull***t... what "false accounts"?
You received nothing from me... I have NEVER e-mailed anyone called "Aaron
Voobner", or the address voobner@yahoo.com

You really are crazy... linking me with posts that were sent from American
ISPs, you need help.
You're flailing about like a beached whale... Get a grip.

===
> Eventually he cracked up and left the group.
===

Ah, boasting how you drive people off the newsgroup.
So you think you drive the rest of us off the newsgroup... I don't know about
the others, but I'm not going anywhere.

I think you need to go back in my killfile... you are just too sick to reason
with, your theories really are just too stupid to even consider.

2152. Brummie

Newsgroup: rec.radio.cb
Date: 2002-04-24 09:58:58 UTC
From: Richard McCollum <rmccollOMA@worldnet.att.net>
Message-ID: <Clvx8.47803$QC1.3388762@bgtnsc04-news.ops.worldnet.att.net>
Source record: 122016

This week's Economist (what time and Newsweek ought to be but aren't) in one of the editorials refers to 'brummy accents'. Aside from actually knowing what in hell was being talked about, not always the case with Britpubs, one also discovers it is no big deal. Kind of like vinegar on French fries, the anticipation is far more momentous than the fact.

Big Kahuna

Hi Toxic,

Oh Puulllleeeeaaasseeee.
Good CB type of GED impression matey;-)

Got the ANT, works very well, thanks for the responses...LOL... obviously
NOT a popular antenna;-) I wanted it for the SO239 fitting, works a treat.

Bye for now.

Darren UK.

Thanks for taking the time to look at the material. Your feedback has
allowed me to make some changes to the documentation in order to make
certain clarifications. This amp will not be available as a kit, at least
for now. The MSRP price is still under discussion pending a determination of
all manufacturing costs. It should be available prior to the actual release,
sometime in June.

What "incidents"? The one where I ask why something doesn't happen?
Maybe you are referring to my analogy explained with simple math? How
can you consider multiplication to be "pure conjecture"? Is it "pure
conjecture" that DXers avoid the trucker channels? Or how about the
interference on the last two solar peaks? That isn't conjecture, it's
history. Or maybe you are referring to signals getting stepped on by
linears -- sure thing Randy, it never happens, it's "pure conjecture",
just like you say -- NOT!

Jesus H. Fucking Christ, are all you keyclowns braindead? How in the
hell do dumbshits like you get to be so goddamn stupid? Did your mommy
and daddy pull you from school because learning how to think for
yourself would be too traumatic? Or is it that you are so desperate
for a legitimate argument to support illegal operation that you stoop
to stupidity? Well hell, not like there isn't enough proof of THAT
already! So what's next? Are you going to throw a tantrum? or hold
your breath till your face turns blue? or throw your food all over
your high-chair? You won't get a pacifier from me, Randy, so I guess
you'll just have to pout in a corner and suck your thumb!

I can see it now, Tim and Randy before the judge: "Well, you both have
been caught red-handed operating illegal radio equipment. What do you
have to say for yourselves?"

Randy: "Duh, the evidence is pure conjecture!"

Tim: "I want my mommy!!!"

Judge: "Conjecture, huh? You were DF'ed, you were witnessed operating
with an amp and your amp was confiscated."

Randy: "Nothing is based in fact!"

Tim: "..sniff.."

Judge: "Here's the amp [plonks it on the bench]. That isn't fact?"

Randy: "...uh, they couldn't tell it was me because it might have been
some of that S9 skip coming in from Bohemia...? Skip isn't reciprocal,
you know..."

Judge: "What are you talking about, boy?"

Randy: "...uh, I don't know, I read it in a newsgroup post from Dick
and it sounded too technical for me to understand, so I thought that
if I couldn't understand it you might not understand it either..."

Judge: "Well I remember that post too. Let's see just what he said,
shall we?"

And of course you convieniently overlook the sarcastic and ad-hominem comments that you make toward other people, which whom, you seem to hold in contempt.

> ....same with your false
> accusations and lies you were reduced to hurling concerning me having a
> problem with hammies,

Your behavior is consistant with the scenarios that I constructed. I also note that you haven't denied any of it, only made an issue out of me calling attention to it.

> only nothing could be further from the
> truth.....you came to me upplaying your license, which I downplayed

And you accuse me of making accusations? When have I ever "up-played" my license? I merely stated that a ham license was something of value, which takes some effort to obtain,(which for some reason, touched a nerve in you) which in and of itself is more than what you needed to do to operate a CB. THIS is a fact. Argue and twist and justify it a hundred ways if you feel so inclined, but it doesn't change the underlying fact.

Your reaction to this is a classic psych 101 textbook example of how some people act when they can't master something. Rather than deal with their own shortcomings, they'd rather dennigrate the achievement, to the point that they convince themselves that it's not really worth having and that they really don't want it, and that no one else would either.

> which in turn led to a wounding of your already bruised and eccentric
> ego

Now who's the one making wild accusations? Yet another example of you not following your own advice. Can you say hypocrite? Sure you can....

> resulting in your pathetic desperate attempts to suddenly make your
> topics personal and focused on me...

Of course they focus on you. You're the one with psychological issues,
including an inflated opinion of your own self worth.

> That appears to be your agenda, not mine, you came at me remember? You
> rattle yourself, like all losers. Have some lucidity.

Don't think so. I make points of logic. You argue by obfuscation. They
say you can't debate with a nut. I can see that they're right.

>
> >Like I said before, you make the perfect newsgroup punch clown. <<
>
> I really haven't paid much attention to what you said before and most

>
> Not someone,,,YOU! Your redundant and determined, yet failed attempts to
> steer this topic toward focusing upon me serves only to strengthen the
> validity of you having problems.

You have these same problems with anyone that'll hasn't yet had enough
of you to simply ignore you. You can't be rational with anyone. You're a
space cadet. The sooner you understand that, the sooner you can stop
swimming in "da-nile".

>
> >makes, you still find a way to obfuscate and twist them into some sort

Like the old saying; "Try to tell, a nut that he's nuts, and he thinks
you're crazy"..... You're a living example.

I have no fear of "humiliating myself". I have about 8 years worth of
posts to this newsgroup, that pretty much establish who I am and what I
stand for. Anyone that has a question, and easily search and see for
themselves.

Sparky, most of the incidents you cite are purely your conjecture. Nothing based in fact. As Dick has stated over and over, not all DX is reciprocal in kind or magnitude. Not that I condone major power at all, but you are a little out in left field with this one.

Hello,
I have one Yaesu FT-757GX and one Yaesu FP-757HD power supply left.I am selling this as a set One Yaesu FT-757GX and One FP-757HD.This set has a few scratches where it was used for field day and has been mobile prior to me getting it.This unit has the mobile mounting bracket.I am asking $500 plus shipping for this set.Shipping and insurance is fixed at $20 dollars.This unit works but with all old equpment it is as is.
I do have a Automatic tuner which matches these that has a intermittant problem the antenna tuner gets stuck in the wait mode.Sometimes here lately it seems to work when moved so I think it is a ground problem.$100 dollars plus $15 for shipping.If you buy a radio above I will not charge the Shipping on this.Will Trade for a TS-50 s with no mods done to it for one of the radios.Thanks for Looking Mike KC8FWD
if interested or any questions e-mail me at

> want, you commie!

Sure, you can take whatever measures are afforded to you, to protest anything you want. But it doesn't give you the right to selectively ignore the laws that you don't agree with. And you're nothing more than a pure hypocrite to chastise another radio operator for doing something illegally, when you are the poster child for illegal CBing.

> >If they're the ones breaking the law, then they're the ones that
> deserve to be prosecuted by it,<<
>
> Yup, but you ain't "IT", just a wannabe enforcer that feels he is better

Not better than CBers, better than those that ignore the law. Remember I AM a CBer.

>
> >not the innocent operators that get caught up in the loopholes of a
> poorly written local law.<<
>
> I suppose you have an example?

Give it time. The way the legislation is worded, leaves the door open for abuses to happen. Most of which will happen to legal CB operators. Those are the people that I am trying todefend here. So much for your theory that I somehow "hate" Cbers.

And what, pray tell, does that have to do with what I just said? Yet
another example of your obfuscation.

>
> >while ignoring the much greater problem of illegal CB pirates.<<
>
> And that just chaps your pretty pink skirt.

I prefer my skirts to be floral prints thank you........

> It's not a problem except to anal retentive types like yourself, unless
> you count ten meter intruders..

Ah! So you do have a point where you acknowledge that there's a problem?
So what then, you favor busting only the law breakers that intrude on 10
meters, but let the rest of the lawbreakers alone? That wouldn't be fair
now would it?

> so go ahead and get it off your hairless chest.

What was that about making wild accusations?

> and accuse me of doing that as well..
> Illegal cbers don;t bother me

Right. Illegal CBers don't bother you, so they can't possibly bother
anyone else and therefore other people don't have a right to complain?

>
> > And you talk about ignorance being bliss..... <<
>
> Yes, I do. You sit here and make all kinds of lies and accusations..most
> are baseless and figments of your volatile psyche.....you call nameless,

> faceless, people criminals based on their posts and opinions, nothing
> more.

Well.... yes. If someone makes a claim of doing something illegal, then
I will counter by calling them what they are. Whether or not they
actually doing what they say is a matter for the FCC.

> ...there may not exist a linear among the bunch of us,,we could all
> take some weird pleasure in pissing you pink skirts off talking about
> linears and freebanding and not do it at all.

Another skirt reference? Another hidden psychological issue I see....

Now I've heard it all. The conspiracy theory. A bunch of USENET geeks
have concocted a plot, to expose people that favor following the law, by
pretending to be outlaw CB operators. All the talk about modding radios,
building amps, and keydowns was just a ruse to flush us out of the
woodwork. Wow! I might've believed it, except that I hear this very same
behavior on the actual 11 meter band. I guess these people are only
pretending as well?

>..and then we have the
> losers, the pinkos like yourself that get all hot and bothered when
> usenet performance art backfires in your feminine face.

The belief that females are less worthy of your attention. Another
"issue".

> Considering the
> source of the few who use the term "keyclown"., I am damn proud to be
> considered one...anything that indicates the most opposite from those
> that use the term is what I want to be.. How does it feel now that that
> long-overdue revelation finally made you aware that you are not a
> spectator?

It proves what I've already known. That you are a contrary sociopath.

Let's review:

A fettish for seeing men in skirts.
A misogynistic attitude.
Sociopathic behavior.
Champion of radio pirates, and anyone that opposes the letter of the
law.

Your psych problems are getting more and more complex the more you post.

Considering that I've witnessed the last 3 skip cycles, I can say for
certain that the sheer level of a skip signal NEVER reached over +10db
over S9 in the 70's, when most people ran barefoot, or "small" amps. The
max signal (and noise) level has risen proportionally in the succeeding
cycles due to the pecentage of people now running amps, and the higher
power levels that these amps are now running. So amps are definitely a
major contibuter to the level of noise and interference.

Ya know what Randy? I'm such a nice guy that I'll give you a chance to
redeem yourself. If you can provide a VALID explanation why the
occasional one-way characteristic of skip makes any greater difference
on band noise than does two-way skip, I'll post a formal apology.
Sound fair? Now I have to work for a living, so you just sit there in
your trailer and draft a really good post, and I'll read it as soon as
I get home.

And just where might the definitive proof for this statement be? Is it true
just because you say it is? I was there too. Maybe it's just that you went
from that coat hanger to a real antenna.

no because 9 out of 10 times its the dx stations stepping on the guy across town. thats why so many have to run boxes to talk locally.

>
>So they never get stepped on by someone running a linear across town?
>Right. Sure. Whatever, Tim.

then you must be using a very poor antenna tuned for some other band.

>Must happen just on 38 cause I rarely hear any S9 skip on 39, maybe
>once a month.
>

yes there is a need to run power while talking locally due to the strong interference from stations in dx land whether they are barefoot or not. its much easier tot alk across country on a barefoot cb during the day then it is 5 miles.

>if everybody in the world stopped using amps
>>it wouldnt go away. 4 watts into a decent antenna is plenty to work the
>entire
>>world with the band open as strong as 27 megs usually is.
>
>Then there's no need for an amp, is there? Open mouth insert foot.

no there not the only people but they are the majority due simply to the fact that they out number the hobby cb'ers in a big way

>That might be relevant if truckers were the only people running power.

sparky have you ever actually listened to chanel 19 during the day? nobody can talk to anybody. its higher than s9 noise level all day. but if you do actually sit and listen its not unusual at all to hear bits and pieces of trucker conversations around the country.

>Of course not, when most of the local traffic is on 19 and a couple
>overflow channels that DXers avoid. So what does that have to do with
>skip? And if skip is as good as you say, why aren't the truckers
>constantly getting lost because someone in California is giving
>directions to a trucker in Texas?

no sparky your the one not making sense. it seems like your trying to minimize the dx that happens on 11 meters. when the solar cycle is high it is the best dx band of all and everybody on this board has experienced it and knows it except you.

>You aren't making any sense, Tim,
>but that's normal.

dave, during the late 70's wasnt the solar cycle reaching its low? and wasnt it the returning of the high part of the cycle and the strong interference from all those barefoot or "small amp" people across the country all taking at once that eventually killed the big cb boom?

Pure conjecture. The memory can also alter itself to deny current
beliefs if the person seeks conflict, which sometimes happens with
passive-agressive behavior. I guess you could say that memory paths
are not 100% reciprocal.

>The
>> max signal (and noise) level has risen proportionally in the succeeding

Mark:
Andy gave you the best advice, because he, like me, IS a CB shop. Use silicon that dries into rubber, after you tape the coax connector up (put silicon above it). What you may want to do is have 2 antennas & 2 disconnects--one for the road and one for local--an antenna that will barely clear when you pull in the garage. I have sold some people 2--it depends on how much you go in the garage with it. Stay away from NO Ground antennas and mounts. I've had 2 in stock for years and had NO chance on selling them yet (snowmobiles and plastic vehicles, and even spome of them have SOME metal a mount can be put on. They are a rip-off and work BAD)!

Now that's a crock of shit!

>>So they never get stepped on by someone running a linear across town?
>>Right. Sure. Whatever, Tim.
>
>
>then you must be using a very poor antenna tuned for some other band.

You mean that a properly tuned CB antenna isn't the right antenna to talk locally? I should use "a very poor antenna tuned for some other band" to get rid of all those S9 skip signals? WTF are you talking about, Tim?

>>Must happen just on 38 cause I rarely hear any S9 skip on 39, maybe
>>once a month.
>>
>
>yes there is a need to run power while talking locally due to the strong
>interference from stations in dx land whether they are barefoot or not. its
>much easier tot alk across country on a barefoot cb during the day then it is 5
>miles.

The rest of us just change the channel. It's cheaper than a linear.

>>if everybody in the world stopped using amps
>>>it wouldnt go away. 4 watts into a decent antenna is plenty to work the
>>entire
>>>world with the band open as strong as 27 megs usually is.
>>
>>Then there's no need for an amp, is there? Open mouth insert foot.

>no there not the only people but they are the majority due simply to the fact
>that they out number the hobby cb'ers in a big way

Who outnumbers hobby CBers? Skip shooters?

>>That might be relevant if truckers were the only people running power.
>
>sparky have you ever actually listened to chanel 19 during the day?

Never.

> nobody can
>talk to anybody. its higher than s9 noise level all day. but if you do actually
>sit and listen its not unusual at all to hear bits and pieces of trucker
>conversations around the country.

That's why they invented squelch. It's cheaper than a linear.

>>Of course not, when most of the local traffic is on 19 and a couple
>>overflow channels that DXers avoid. So what does that have to do with
>>skip? And if skip is as good as you say, why aren't the truckers
>>constantly getting lost because someone in California is giving
>>directions to a trucker in Texas?
>

>the dx that happens on 11 meters. when the solar cycle is high it is the best
>dx band of all and everybody on this board has experienced it and knows it
>except you.

Listen to yourself, Tim. You are saying that nobody can understand
anybody on 19, yet it's being used all the time. Then you say that you
need a linear to get above the noise from the skip, but who are you
talking to? Someone across town? And where do you think your signal
goes? Just to where you are talking to, and not into skipland
contributing to the noise? You are just making contradictions!

Pure conjecture. Fads come and go.

2175. Satan goes to church (OT) this should get Dave excited heheh

Newsgroup: rec.radio.cb
Date: 2002-04-24 13:42:18 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <RCyx8.1123$a3.143883@cletus.bright.net>
Source record: 122039

A few minutes before the services started, the townspeople were sitting in their pews and talking. Suddenly, Satan appeared at the front of the church. Everyone started screaming and running for the front entrance, trampling each other in a frantic effort to get away from evil incarnate.

Soon everyone had exited the church except for one elderly gentleman who sat calmly in his pew without moving, seeming oblivious to the fact that God's ultimate enemy was in his presence.

So Satan walked up to the old man and said "Don't you know who I am?"

The man replied, "Yep, sure do."

Aren't you afraid of me?" Satan asked.

"Nope, sure ain't." said the man.

"Don't you realize I can kill you with a word?" asked Satan.

"Don't doubt it for a minute," returned the old man, in an even tone.

"Did you know that I could cause you profound, horrifying, AGONY for all eternity?" Persisted Satan.

"Yep," was the calm reply.

And you're still not afraid?" asked Satan.

Nope," said the old man.

More than a little perturbed, Satan asked, "Well, why aren't you afraid of me?"

The man calmly replied, "Been married to your sister for 48 years

i>'ve worked barefoot stations in skipland that were higher than a s9 the entire time. are you saying that they wouldnt cause a problem to my local comms because they were barefoot and not running an amp? <<

>>Gee Tim, how often does that happen compared to Peter Powerhead down the road yelling, "WORLDWIDE...WORLDWIDE!!!" into five channels?

Daily. If you used a cb instead of spreading your love around you would realize.

>>Not very often. It would probably happen -more often- without all the amps interfering locally, don't ya think?

No, it is strictly dependable upon the conditions. Pick up a copy of the ARRL antenna handbook for a sound introductory.

Hozer:
What you fail to realize is that in a lot of apostate "churches" across the land, satan's rep. is behind the pulpit! Teaching Un-Biblical nonsence such as "don't hit your kid with the rod (no discipline)" and other humanistic nonsence, it is like the blind leading the blind into a ditch. Now as far as that guy's seester goes, only Jesus gives you the power over satan, to be not afraid of him, or his alleged sister. So all the answers are in THE BOOK. If only people read it and kept HIS commandments, they would have a lot less problems than they do now.
Dave!!!!!!!!!!!!!!

Last three? Somehow the math doesn't quite add up for you to actualy
have been able to "experience" the first of the last three.

>I can say for certain<<

Actually, there are many reasons why you can't "say for certain"....

>that the sheer level of a skip signal NEVER reached over +10db over S9
in the 70's, when most people ran barefoot, or "small" amps.<<<

Only the limitations of your gear at the time could support such a
statement, or you were not actively participating at the time.

>The max signal (and noise) level has risen proportionally in the
succeeding cycles due to the pecentage of people now running amps,<<

Oh man! Not even close. It is the intensity of the sunspots that is
responsible. Take your superstitions on over to alt.legends or to
snopes.com.

>and the higher power levels that these amps
are now running. So amps are definitely a major contibuter to the level
of noise and interference.
Dave
"Sandbagger"<<

Thanks for the ed-ju-ma-cachen.

Yes as long as you post everytime with my name in your Sig File I will run your faggot as up and down the NG. So who can't stop thinking of who I don't want some homo having me in there sig file. Queer

2192. Re: Indiana Keyclown Busted

Newsgroup: rec.radio.cb
Date: 2002-04-24 15:15:05 UTC
From: twistedhed@webtv.net
Message-ID: <24088-3CC6CBF9-18@storefull-2314.public.lawson.webtv.net>
Source record: 122107

>And of course you convieniently overlook the sarcastic and ad-hominem comments that you make toward other people, which whom, you seem to hold in contempt.<<

Not other people, no matter how much you attempt to make it appear as such, just those that have personal problems me that attack instead of communicating (such as yourself). If you can find a single post of mine where I began insulting someone or was rude to someone for no reason, post it unsnipped with the post it was in reply to.

...same with your false
accusations and lies you were reduced to hurling concerning me having a problem with hammies,

>Your behavior is consistant with the scenarios that I constructed.<<

You are not qualified to make such a statement. Your technique with "construction" is flawed.

>I also note that you haven't denied any of it, only made an issue out of me calling attention to it.<<

Only to the losers on this group. So many things you touch on are not worthy of comment. Being shown how little you actually know of a radio related subject upset you greatly, so much to the point that all your posts are now directed toward me seeking to make me your topic. If you were able to see yourself as others do this would cease to amaze me.

only nothing could be further from the
truth.....you came to me upplaying your license, which I downplayed
And you accuse me of making accusations? When have I ever "up-played" my license?

A few posts ago when you were speaking of narcotics use. You claimed it made you "better" than the average cber, along with the claim you made of a what a great accomplishment it apparently meant to you to pass a hammie test. Ask a competent hammie for assistance, you appear to be struggling with even the most basics of human function needed for normality...day to day recollection.

>I merely stated that a ham license was something of value,<<

It wasn't "merely" or I wouldn't have commented. Stating it makes you better than another is not "merely."

> which takes some effort to obtain,(which for some reason, touched a nerve in you)<<

Actually, it failing to impress me is what touched a nerve in YOU, evident by your introduction of personal insults to the thread.

>which in and of itself is more than what you needed to do to operate a CB. THIS is a fact.<<

Never debated that issue.

>Argue and twist and justify it a hundred ways if you feel so inclined, but it doesn't change the underlying fact.<<

Now what are you attempting to introduce to the thread?

>Your reaction to this<<

You consider not reacting a reaction?

>is a classic psych 101 textbook example of how some people act when they can't master something. <<

Ahh, the return of true bliss.Do tell?

>Rather than deal with their own shortcomings, they'd rather dennigrate the achievement, to the point that they convince themselves that it's not really worth having and that they really don't want it, and that no one else would either.<<

Doesn't have anything to do with anyone else, you are the only one here desperately fighting for a change of heart by cbers to recognize you for something that you fail to see doesn't mean an entire lot in a cb room, and this angers you for whatever reasons.

which in turn led to a wounding of your already bruised and eccentric ego

>Now who's the one making wild accusations?<<

It's not an accusation, it's an astute observation, and an accurate one at that. This is supported by your introduction of insults, name calling, and repeated frequency of use of such tactics.

>Yet another example of you not following your own advice. Can you say hypocrite? Sure you can.... <<

Sure I can, and I say it quite loud to your type, and that apparently makes your vein in your thick neck throb when you see yourself as others do.

resulting in your pathetic desperate attempts to suddenly make your topics personal and focused on me...

>Of course they focus on you. You're the one with psychological issues, including an inflated opinion of your own self worth.<<

Your attempts are becoming more pathetic by the day.

That appears to be your agenda, not mine, you came at me remember? You rattle yourself, like all losers. Have some lucidity.

>Don't think so. I make points of logic.<<

No. You lie and insult. Thanks for yet another illustration.

>You argue by obfuscation. They say you can't debate with a nut.<<

You lost any debate when you became insultive. You are now in a losing damage control mode.

>I can see that they're right.<<

As I said,,,nameless,,,faceless,,,,,

>Like I said before, you make the perfect newsgroup punch clown. <<

I really haven't paid much attention to what you said before and most likely, won't in the future..you have too many issues to fix before we can expect conduct becoming of an adult-like fashion from you.

>Mr. Pot, meet Mr Kettle.<<

As all know, I treat people the way they treat me. Watching you howl has been somewhat satisfactory.

>No matter how many points someone<<

Not someone,,,YOU! Your redundant and determined, yet failed attempts to steer this topic toward focusing upon me serves only to strengthen the validity of you having problems.

>You have these same problems with anyone that'll hasn't yet had enough of you to simply ignore you. You can't be rational with anyone.<<

Sure I can. Actually, you are the exception to hammie radio, and like a few others in the minority, a very poor example.....a black eye, a cancerous lesion that festers every now and then.
Every once in a while a rabid hammie like yourself comes by and engages me in a conversation, then commits credibility suicide with the personal insults and angry methodical tactics. Your apparent disdain for cbers is proof itself of your agenda by your presence alone. Couple that with your lack of self control and proneness to insult,,,,well, as I said, your actions speak for you.
I suggest a competent hammie teach you a course in diplomacy. Start with your manners and basic stuff, like no name calling, stick to the points of the topic, and demonstrate a certain amount of self-control, do not let your emotive instinctive responses dictate your posts.

>You're a space cadet. The sooner you understand that, the sooner you can stop swimming in "da-nile". <<

No,,,you need to get over your nose problem and not worry about where I swim and dump a barrel of chlorine in your septic tank that you use for bathing.

>makes, you still find a way to obfuscate and twist them into some sort of alternative reality, where you are king and the rest of the world are but small furry creatures. Drugs will do that to you, or was it the "Saucer men"?<<

I take your word for it. You would be well advised to lay off of these "drugs" you speak of, but it sheds plenty of light on your posts.
If you wish to carry on with your childish behavior, we can take this to email,,,if you wish to air your dirty laundry and shortcomings in this public manner, I have no problem watching you humilate yourself further.

>Like the old saying; "Try to tell, a nut that he's nuts, and he thinks you're crazy"..... You're a living example.<<

And you are repeating yourself with redundant insults. That you blame another for your behavioral problematic responses is indicative of people who fail to take responsibility for their actions.

>I have no fear of "humiliating myself".<<

Obviously you aren't intelligent enough to know the difference.

> I have about 8 years worth of posts to this newsgroup,<<

LMAO! And that means about as much as your license does.....squat! But I guess it does to you, eh?

.
>that pretty much establish who I am and what I stand for.<<

Especially your latest posts...maybe one could serve of intrinsic (chuckle) value as a sig.

>Anyone that has a question, and easily search and see for themselves.
Dave
"Sandbagger"<<

No need. This thread is a perfect example.

i had a email from aaron voobner - in the email aaron gave what he
claimed was his true identity.
here are the email details with the name blanked out.

Date: Tue, 9 Apr 2002 01:21:22 -0700 (PDT)
From: "aaron voobner" <voobner@yahoo.com>
To: aarronvoobner@yahoo.com

Dont tell anyone, I am **********

the claim was so unbelievable that i forwarded a copy of the email to
the person aaron claimed to be.
what did i get back from the person named by aaron?

From: *****@*****.***
Subject: Re: Douchner claims to be **********.
To: aarronvoobner@yahoo.com

Mr McVoobner, he is me.

the identity given is so unbelievable that i still cant believe it but
that person has confirmed it.
of all the people in all the newsgroups why did he tell me?
am i the only person he has told?

so where does the voobsie site go from here?
wow..... what funny pages i could create around that named person.
maybe he could email me with reasons i shouldnt coz right now im
feeling creative.

Jï¿½ck McVï¿½ï¿½bner aarronvoobner@yahoo.com

the Federal Government and its authority DO NOT EXIST, except in the
mind of a few jealous anti CB types! What's more, a clandestine group
of saucer men are exerting undue influence on the general public"

2202. High SWR across all channels

Newsgroup: rec.radio.cb
Date: 2002-04-24 21:46:22 UTC
From: "Mark J. Haythornthwaite" <spam@pacbell.net>
Message-ID: <3CC727D2.3FE158AC@pacbell.net>
Source record: 122116

I just got my install set up last night on my Nissan Pathfinder, a Radio Shack CB with a Cobra HG A1000 magnetic mount antenna (temporarily, until I get my Firestik). The antenna was located smack-dab in the center of the roof. I hooked up a SWR meter and started checking.

I drove out to the middle of our street (cul-de-sac, end of the street) so I was now at least 50 feet from anything. Checked SWR and now it was over 3 on 40 and 2.5 on 1. I lengthened the whip a little, but it had no effect. I fiddled with it a lot, then eventually gave up and parked in the garage again. Just for the heck of it I checked the readings in the garage. 2.3 on 1 and 2.8 on 40. I know that doesn't mean anything, but FYI.

The antenna was NIB. The cable is not damaged in any way. The meter was NIB. I did some reading about checking the antenna with an ohmeter, with magnetic mounts it should there should be continuity between the core and the shielding, and there is. But the instructions for dealing with high SWR across all channels do not talk about lengthening or shortening the antenna, they talk about bad cables, bad grounds etc. The radio is grounded properly.

The recommended antenna length adjustments (which equalize SWR between channel 1 and 40) had no visible effect on my overall SWR ratio. So I am trying to find out what will lower it. Anyone?

Mark

It seems the antenna's too long. Like I'm telling you anything you don't know, hehe.
You might be able to shave off some of the antenna from the tip, by small increments, and keep adjusting/measuring SWR while you're at it.
If the cable doesn't show any shorts or other problems, and your radio is in good shape, then you should shorten the antenna until you get a decent reading.
For what it's worth, in a mobile installation, an SWR of around 2:1 or so, across the band, isn't anything to be very worried about. You'll get out fine, you'll receive fine, and any lowering of SWR wouldn't likely be making any difference to how well you get out or receive.
If you can exchange the antenna for another similar unit, try that. It might be a bad antenna, even if your measurements don't show it as such. But it couldn't hurt, particularly if you aren't spending any more money on the experiment.
Don't worry about cable length. If you were to see a difference in SWR by shortening your coax, it just means that you set up was fine anyway, and now youv'e just skewed the readings to make you feel better, but the rig isn't performing any better or worse than it was before.
Best of luck-
Linus

Try moving the antenna around on the vehicle and see if this helps, you can
also take a piece of stiff wire(10-16 guage) wrap/attach it to the end of
your antenna this will help so you won't have to get a longer whip to test
the swr, make it a foot or so long, you can cut this wire now and see if and
what effect it will have on the swr without wasting a whip.

2220. Palomar 250HD Real world power question...

Hooked up one to a friends card...he has a Palomar 250HD How much power to expect?

On high I deadkey about 65w and swing upwards of 100-105...

I'm testing with the digital aries meter...

Am I about on the money?

Thanks..

BTW, I should have corrected you before now...it is not called a
trailer...it's called a manufactured home! A trailer is more akin to what
you live in...you know, the one you pull behind the old station wagon. I
swear! Some people!

2224. Rec.Radio.Cb Fear Factor Style

Newsgroup: rec.radio.cb
Date: 2002-04-25 00:46:54 UTC
From: radiofreeamericans@yahoo.com
Message-ID: <6afbaadf.0204241646.19381b2d@posting.google.com>
Source record: 122138

RecRadioCb Fear Factor
The Players:

Aaron Voobner
(Husband, Father and ok guy, except when it comes to the CB Radio.
hates anything to do with illegalities, no matter how small or trivial
They may be.)

George Busch
(Marital status unknown, employment unknown, life outside of radio
and newsgroups unknown. Just a cranky 49 year old man with a strong
emotional attachment to Rec.Radio.Cb.)

Frank Gilliland
(Girlfriend? Maybe, employment says he is. Jenny Craig, you bet!
Ok guy, but like Aaron, seems to put to much emphasis on illegal
activities on rec.radio.cb.

Announcer:
So, we open with the first challenge of three, are we ready
contestants?

Aaron: Sure am, what are the rules, we have to have rules, without
rules
this wouldn't be a contest. I want to see the rules; they must be
printed on
plain white paper in English, so if I want to protest it I'll have
recourse.

Frank: Yup. What's for lunch? I'm frickin starving, if you think those
God
Damn Jenny Craig meals are satisfying, your crazy!

George: F@#K You! You're a Fag, Homo Queer, lets get on with this
before
I go into withdrawals from the newsgroup

Announcer:
Ok your first fear factor is.....

Talk on channel six of the CB Radio

Aaron: Great! I can tell everyone on the air what I think of their
high powered
Illegal amps.

Frank: Crap, I'm more worried that one of those SOB's is going to
break

Into my home. Also, do you think that they may have some BBQ? I'm starving!

George: F@#k You, lets get it on! I can out talk any tree swinging, Homo, queer
c%$k sucker any day of the week. Except Thursdays, I go to anger management
classes that day.

Announcer: I don't think they're working George. Ok Aaron your first up.

Aaron: Break channel six, break please. (Crackle, hiss sounds of skip)
Break channel six, break please. (Old man in a wheel chairs keys up, what
The hell is this guy head trying to do, who the hell says break on a channel any more)

Aaron: Hey, don't swear, that's against FCC rules part 95 sub paragraph
blah blah blah. (many signals now key up, BBWWAaaaaa HHHaaaaaaa, he's joking
right?)

Announcer: Ok it's your turn George

George: Clicks down the key on the mic, Hey! You Homo mother f@#cking Queer a@#holes, listen up. I'm George and you fags have to listen to me or
I'll harass you day and night under assumed names. (909 keys up an says, did
I here some pecker wood making threats on this here channel?)

George: Yea, you c*#k gobbling, d%@k smoker, don't make me do it? (909:
Yawn, somebody get this boy a hankie. Thunderous laughing starts coming
Through the speaker)

Announcer: Frank your up

George: Hey I'm not done yet, I always get the last word in, f@#king Fag
Announcer.

Announcer: Frank, please go ahead.

Frank: Ok here goes, break for 4 fried chicken, dry white toast and a coke.
(Tower bender keys up and says: Hey it's Jake Blues of the blues brothers.)

Frank whimpers: I can't go on, they insulted me and I'm paranoid that they will
Find where I live and mess with me, I quit.

Announcer: Well, we already after the first round are down to two contestants.

Stay tuned for the next round

With all due respect, you two are talking past each other and I am more or less in the middle.
I will plead guilty to using 'reciprocity' in two senses: that DX paths are - in my opinion - often not the same in both directions so hearing does not always mean working them, and 2) for communication purposes it is really useful for both people to be at roughly equivalent power levels (reciprocity) so you can hear what you plan to work. If the world is full of 5 watt rigs running 500 doesn't help a damned thing but does upgescrew it for everyone else in earshot. Which is the reason for beam antennas: it is the only thing you can do that helps both transmit and receive essentially equally.

And spell my name right.

Dead key is NOT high, DUMMY! HIGH DRIVE means put 10 watts RMS into it! If
not hi drive, then this unit is 5w. That's why you only have 65 dead key.
put more into it (per manufacturers word, NOT mine), and NOT the newer
INCOMPETANT CB shops that put 2 watts into a HI Drive, when they should have
10! That is the REAL world TRUTH !
Dave!!!!!!!!!!!!!!!!!!!!

That's about where you should be operating that unit. If you go much higher
than that with the carrier... your harmonic content will "go to the moon".
Since the bias source on that unit is not regulated, the harmonics are
probably not real good even at that level...

Typical duck-out line. You took the time to make these two posts,
right? So what's so hard about trying to explain how one-way skip
makes so much more difference on band noise than two-way skip? Do you
need time to consult with Toll and Eitner? Go right ahead, it's not
like they can answer the question either. Maybe tomorrow you can come
up with some more bullsh... er, a good answer.

Blech! Chicken Curry (when made correctly, not that restaurant crap)
is more my favorite poultry dish. And I quit caffiene several years
ago when I found out it was just as hard on the liver as alcohol,
which I hardly drink anymore either. Regardless, a light apple cider
goes very well with Chicken Curry.

Announcer: Ok your first fear factor is.....Talk on channel six of the CB Radio!

Aaron: (keys mike) "Testing One Two Three" (unkeys) OK. Next challenge.

Announcer: No, you didn't do it right!

Aaron: You said "Talk on channel six of the CB radio" so I tuned to channel six, keyed the mike, and talked. I completed the challenge.

Announcer: B-b-b-but I meant you should key up and see if you could get heard.

Aaron: Well then you should have been specific. Heard by whom?

Announcer: I dunno, someone, uh, ANYONE!

Aaron: Clearly you haven't thought this challenge through very well have you?

Announcer: Look, I'm just a keyclown. I ain't had any highfalutin' schoolin'. All I know is you supposed to see what a challenge it is to key up on channel six.

Aaron: But it ISN'T any challenge. A brain-damaged ass could do it.

Announcer: Ha! Got ya there! Prove it, Mr. Voobner!

Aaron (sighs): Fine.

AARON GOES BACKSTAGE. A MOMENT LATER HE RE-APPEARS LEADING A DIZZY-LOOKING DONKEY.

Aaron: Behold, a brain-damaged ass.

AARON HOLDS THE CB MIKE UP TO THE DONKEY'S FACE AND KEYS IT.

Donkey: HEEHAAAAWWWWWEEEHAWWWWW!!!

CB: "yeah that heehaww station come on back eeehaw you a superstar no doubt about it heeaww!"

Aaron: There. A brain-damaged ass has made a contact on channel six.

Announcer: Blub....splut.....you CHEATED!

Aaron: How?

Announcer: Well...I don't know...but you DID. Somehow or other!

Aaron: Did I break some rules?

Announcer: No....uh....breakin the rules is not cheatin'.

Aaron: Then how is it possible I cheated?

Announcer: I don't know yet....but I'll think of a way! You got me all turned around with your fancy talk.

Sparky: Are there going to be any more challenges? Because if not, I'm going back to the hotel room and charge a pound of Beluga caviar and a case of 1924 Poilly Fusse to the room. The show IS paying for all our travel expenses, correct?

Announcer: Uh....

George: Great! Because I've ordered a buncha $6000 a night call girls to my room.

Aaron: Cool! I'm calling the Mercedes dealer soon as I get back.

Announcer: WAHH!! I HATE YOU GUYS!!!!!

I don't know Dave, but hams have worked moonbounce - 2 way communication
using the moon as a passive reflector - using 85 watts. How does that
compare with 10,000 or more for .... ? BTW, 100 watts should be good
for worldwide communication (with the appropriate choice of frequency
and
judicious choice of mode - ssb is FAR superior to AM and there are modes
which are more effective than ssb as well). Of course, the 85 watts may
have only worked with 1/2 wave of coax. Ummm ... what is a half wave
of coax on 24 GHz?

Of course, some hams would rather just occupy a ton of bandwidth on the
newsgroups concerning 'illegal' radios ... so, to me, it's a wash.

Wonder where you found a Mac and Don's with an adult-drink license? Some years ago I was more or less forced to eat in an Arby's with a beer license and a Budweiser sure did wonders for the plastic beef and pasteurized process cheddar cheese spread. But I didn't think Mickey D's franchise agreements allowed licenses -- too much temptation for the HamBurglar.

>even a s9 noise level isnt gonna stop truckers looking at each other on the >highway from talking but get two miles away and its near impossible barefoot

CB isn't meant for DX. It's a short-range service. If there weren't any boxes, you could probably get the far-end of that 1-5 miles quoted by the FCC. So at least on 19 it's working the way it should, although with more noise than should be there. But since it's still being used, the noise can't be half as bad as you say. Except maybe for purposes other than for what it was intended.

>>Listen to yourself, Tim. You are saying that nobody can understand >>anybody on 19, yet it's being used all the time. Then you say that you >>need a linear to get above the noise from the skip, but who are you >>talking to?

And it's amazing to hear you complain about all the noise, yet in the same breath condone the use of amps that add to the noise.

>the squelch doesnt work when the dx white noise is higher than the stations >signal

Very good. Now we have someplace to start.

>>That's why they invented squelch. It's cheaper than a linear.
>
>thats the problem. try it out. its s9+ every single day that the dx is in. you >can hear bits and pieces of people talking to each other on the interstates but >thats all youll hear. and how can you be so adiment somethings not happening on >a channel that you admitt to never even monitoring during the day?

I was being sarcastic. I know what 19 sounds like, and I know that most truckers have little problem working their squelch. And many of them understand and accept the range limitations of CB radio. The rest of them get linears so they can make believe they are the big man on the box.

>>>sparky have you ever actually listened to chanel 19 during the day?
>>
>>Never.
>
>truck drivers on cb's out number hobby cb'ers or hams.

But truck drivers are not the only people that talk locally. Let me refresh your memory as to what you said:

>no because 9 out of 10 times its the dx stations stepping on the guy across
>town. thats why so many have to run boxes to talk locally.

Now put what's left of your alcohol-dissolved brain in gear for a
minute: In that statement you say it takes a linear to be heard above
the DX noise, but that linears don't add to the band interference.
Well, if the linears can be heard above the DX noise, don't they have
to be louder than the DX noise? And since they are louder than the
existing noise, how can they NOT be adding to the interference? And
since these linears are pumping part of their power into the
stratosphere, how can they NOT be adding to the DX noise?

Think real hard, Tim. I know it hurts, but try.

>>Who outnumbers hobby CBers? Skip shooters?
>
>i dont know about you but when the dx is in full blast in texas all 40 channels
>are wall to wall non stop.

Doesn't happen here. Sounds like local traffic to me. You see, I am
blocked from all the ground waves from both the East and West, but
skip works just like any other place. We don't get the unbearable
noise you attribute to "skip", so it must be local noise you are
hearing. Either that or you are just listening to the static and your
mind is playing tricks on you. Try turning up your squelch.

>>The rest of us just change the channel. It's cheaper than a linear.
>
>from what your saying i think you need to recheck your match

There is nothing wrong with any of the radios or antennas I use on CB.
Try to find another excuse.

Were those questions too simple to understand, Tim? If you want I can
make them a bit more confusing so you can try and play stupid once
again. But I don't think that would work since you painted yourself
into this corner. And now that you can't find a way out you want to
quit the game? It don't work like that, Timmy.

The funny thing is that I didn't beat you -- you beat yourself!

>how much wood would a woodchuck chuck if a woodchuch could chuck wood? man get

>>existing noise, how can they NOT be adding to the interference? And
>>since these linears are pumping part of their power into the
>>stratosphere, how can they NOT be adding to the DX noise?

This is just too simple, Tim. Can't you answer such simple questions?
I'll even give you the answers, and you just copy them, ok? So here's
the first one:

>>Well, if the linears can be heard above the DX noise, don't they have
>>to be louder than the DX noise?

The answer is: Yes, they must be louder than the DX noise.

>> And since they are louder than the
>>existing noise, how can they NOT be adding to the interference?

The answer is: They DO add to the interference.

>> And
>>since these linears are pumping part of their power into the
>>stratosphere, how can they NOT be adding to the DX noise?

The answer is: They DO pump noise into skipland.

Now just copy the answers. Is that too hard? Didn't you ever copy
someone's paper in school? Sure you did, Timmy. Get to it...

So homes that are not delivered on wheels just grow out of the ground,
instead of being manufactured?

The term is just a "politically correct" term to make people feel better
about the fire traps that they purchase to live in. Whether it is too
big to pull behind a pickup truck or whether it remains on wheels is
immaterial.

The best ground plane would probably be a salt-water marsh. But for
something you can put up on the pole, any ground plane that has
between 4 and 12 full-length radials (102-104" for CB) sloping about
45 degrees and fed with 50 ohm coax. This is assuming, of course, that
you are using a 1/4-wave vertical whip for the radiator.

Before trying the things suggested by others, you need to find out what
the SWR is on 1, 20 and 40. That will tell us a lot more about the system.
It does not matter if you do this in the garage or out on the street.

Make sure, on each channel, that you set the forward level to the calibrate
mark before checking the reflected level.

In a way you are both right. A properly adjusted and driven AM linear
will (at 100% modulation) 'swing' up to 150% of dead carrier RMS power
under modulation but no more. Anything more is simply crap.

Anything less indicates a lack of modulation, inadequate power supply, or
more likely a poor set up for any number of good reasons.

Not entirely sure what you mean by 'final power' but this is one more case
where meter readings are of interest only if you are planning to enter a
meter-reading contest.

Not in this case. I distinctly remember "skip" in the 70's. It was, as a matter of fact, the time I first worked Europe, and with a paltry (by today's standard) 50 watts.

Ask anyone that was there. We could have local conversations in the height of the sunspots in the 70's, and the mean signal levels of the skip stations rarely exceeded S9, and those that occasionally did were clearly running some power (As evidenced by their distorted audio and back swinging signal). The barefoot stations usually stayed in the S7 to S9 area.

Contrast that to a typical day during the last sunspot cycle, where the S meter rarely dropped below S9 on the legal 40, while all the power stations play king of the hill and try to power over each other to work DX.

> Is it true
> just because you say it is? I was there too. Maybe it's just that you went
> from that coat hanger to a real antenna.

I've had a "real" antenna since about 1974, so that isn't an issue.

Look at this another way. Propagation is not channel specific. Why then is the average noise level on freeband channels so much lower than the legal 40? It's lower becasue there are not as many stations competing

for the same bandwidth, and therefore huge amounts of power aren't required.

The bottom line is that people using amps are a major contributing factor to the high average noise level on the legal 40 during peak skip cycles. Take away that power and the nosie would be much lower.

Good theory, except that this cycle (23) has already peaked, and it is
not as strong as the previous cycle's (22) peak, yet the "noise level"
is still stronger.

> that eventually killed the big cb boom?

Solar cycle 21 started in 1976 and peaked somewhere around 1978. That was a time of strong skip activity.

And you bring up an interesting point. At that point in time (1978) the CB "boom" was in full swing, so there were probably as many or more sheer numbers of CBers then as there are now, yet even with that, the skip interference is still stronger now, which can be directly attibuted to the increase in the power the average CBer runs.

In 1978, if you ran 50 watts you were "somebody". If you ran 150 watts, you were considered a "power station". If you ran the ridiculous amount of 500 watts, you were the local RF god.

Nowadays, 500 watts is considered a "driver".

The CB "boom" was a fad (the 70's were full of them, think pet rocks, disco, and platform shoes), and like all fads, it eventually dies. I don't think skip was the main reason for the decline. In fact many people are attracted to DXing.

Like the Buggles song, "Video killed the radio star", the biggest killer of CB is technology. In the 70's, CB was one of the easiest ways to get communications in a car. Today, you can carry a cell phone. We also have the internet, and all sorts of video, voice and data communications capability. CB (Like ham radio as well) is considered obsolete technology. Only people that have a fond love of radio will stick with it over newer technologies, which mostly consists of us "old farts", that still remember things like tubes, and 8-track tapes.

The problem with math is that you can't solve for more than 1 variable.
Evidently you're plugging in the wrong numbers. I was a witness to
cycles 21, 22 and 23, which is starting its downward swing right about
now. In fact I probably just missed the tail end of cycle 20 by a year
or 2.

>
> >I can say for certain<<
>
> Actually, there are many reasons why you can't "say for certain"....

No, there aren't. You can argue things like type of antennas, or the
quality of the radio's "S" meter. But what you don't know is that I
still have the same radio that I had in the 70's, and can use it to make
signal comparisons. Besides, we're not talking about small differences
here. The difference in the sheer magnitude of interference from skip
between the 70's and now is like night and day.

>
>
> >that the sheer level of a skip signal NEVER reached over +10db over S9

What limitations? I am talking about the legal 40 now. I'm sure that if
you go far enough out of band, you will likely find a frequency that is
devoid of power stations, and a comparison between the 70's and now
would yield little difference (Static is static).
Heck in 1977, my home channel was channel 6, along with a great bunch of
local people. We could have conversations over the skip, when it rolled.
Today, I routinely see signals of +20 or greater on channel 6. Don't
tell me it isn't worse now.

>
> >The max signal (and noise) level has risen proportionally in the

>

> Oh man! Not even close. It is the intensity of the sunspots that is
> responsible. Take your superstitions on over to alt.legends or to
> snopes.com.

Hello! The magnitude of the sunspot activity of this past cycle, is no greater (And in fact less) than the last cycle. The data is posted on the web, if you don't believe me.

And besides, even if the sunspots were significantly greater, to state that running high power makes no difference in the amount of skip interference is like saying that running an amp does nothing to your transmitted signal. That's pure baloney.
If a barefoot station gives me a S7 signal, and running power, he's +10 over S9, then that's an increase. Factor in the amount of people that routinely run amps whether they're shooting skip, or trying to power over it, and the amount of "RF pollution" will be higher no matter how you cut it. That's just plain common sense.

> talking to? Someone across town? And where do you think your signal
> goes? Just to where you are talking to, and not into skipland
> contributing to the noise? You are just making contradictions!

And this is the crux of the problem. The skip rolls in. People that like DX crank up their power to shoot it. Those that want to continue to talk locally, crank up the power to get over the DX. The DXers crank it up more to get over the noise of all the locals talking across their towns, and the cycle repeats. It's a snowball effect.
Changing channels on ther legal 40 is not normally effective, since the skip noise is present and hih on all the channels. Some (like 6 and 19) worse than others, but none will be quiet enough to talk to stations 5 or 10 miles away, unless you run SSB and slide off channel a few Khz.

For the local CB enthusiest, who has no interest in DX, he has only 2 practical alternatives to dealing with DX noise. He can either crank up his own power to be heard over the skip, or go out of band to a quieter freeband channel. I prefer the second option as it does not contribute to the noise level. Hang in there. This solar cycle should be dead in another 3 years, and then the band will be usable again, for locals.

Well Dave, Since you asked...

As you've probably read from my posts, I operate 99.99% SSB on 11-meters. The other 0.01% is when the mode switch on the Grant XL passes the AM position on its way from LSB to USB and vice versa. Now I will admit that when AM is quiet, (At night) it's makes for some nice rag-chewing. However, I've yet to hear SSB signals splashing across several channels the way I hear some folks on ch. 11...when I'm on ch. 14. (Where I used AM to send Morse code.) Oh yeah, I also use AM to take SWR readings.

Speaking of SWR readings, I noticed a funny thing about the SWR meter on my tuner yesterday. I threw up a quicky indoor dipole cut to an incorrect length to see if the tuner could "flatten it out." Well, it did so without even working hard as shown on the rig's SWR meter, but the tuner's SWR meter appears to indicate the "true" SWR along with the forward/reflected power of the antenna. It's one of those cross needle meters. Kinda cool but wierd at the same time. What if I didn't have another SWR meter? You can't use the meter on the tuner itself to tune for lowest SWR. :-(I could be wrong about this and would happily accept advice from the peanut gallery. (Dick, Doc, Sparky, etc...) Luckily, I do have a separate SWR meeting and most of my rigs have an internal one too. (Not the FT-840.)

The rule of thumb for any amp, to run properly on AM and not to sound mushy is to find the amp's peak power output (Increase drive level until the amp no longer increases output in a 1 to 1 fashion with drive level), divide that number by 4 and set the drive so that your deadkey power is equal to that number. THAT is the proper way to set up an amp, unless you're a power junkie and don't really care what you sound like.

Once I was driving across (Kansas? Iowa?) in the middle of the night, one of those stretches where there's not a gas station for 50mi, and maybe see another vehicle every half hour or so.

I hadn't heard anything on 19 for a while, so I cranked the squelch down: dead... silence. Nothing. Truly amazing. I left it cranked down and after a while the noise started creeping back until it was a normal garbage proportions.

The answer to your question is the Hy-Gain 500 or 525 Penatrator 5/8 wave, 21+' high, 9' radials. No more left--I have one NOS I will use myself someday. I have something similar for $200. E mail me direct @ truth@planetc.com for details. Also have Stardusters and 1- 1/4 wave groundplane left too for $100 ea.

>CB isn't meant for DX.<<

Says who? The law? Natural law always supersede man's law. This is a shining example of poor policy and puts forth the best reason to date for ignoring this FCC rule.

>It's a short-range service.<<

Not during DX cycles.

>If there weren't any boxes, you could probably get the far-end of that 1-5 miles quoted by the FCC.<<

Not everyone lives in an area lousy for cb transmission.
Many of us here get 10 times the distance you erroneously claim, many times, more.
Flip it to sideband and our flatlands allow even more distance.

>am i the only one that has channel 19 s9+ most everyday with white noise? the only time its not like that is if i have a shitty antenna or a walkie talkie. every other channel is full to when the dx is in. maybe he just doesnt get dx i dont know or is texas that special? what good does it do to turn up your squelch to blank out the noise when its s9? youll only be able to hear stations within a mile or two of you or the ones further with big boxes.<<

Channel 19 is quite the same here, a full meter of noise but not really DX. At the same time, unless a driver is within a few miles, both sides of any conversation taking place is difficult to hear.
With all the water, add California to the mix and our states are just about the best there is for DX (with a humble nod of acknowledgement to the Aloha state) and those other cats don't hear near what we can..of course, there are your exceptions, but as you see, he isn't one of them.

Source record: 122151

>Ask anyone that was there. We could have local conversations in the height of the sunspots in the 70's, and the mean signal levels of the skip stations rarely exceeded S9, and those that occasionally did were clearly running some power (As evidenced by their distorted audio and back swinging signal). The barefoot stations usually stayed in the S7 to S9 area.<<

Oh brother. You are of the mistaken belief everyone that was on cb in the 70's experienced the exact same conditions as yourself.

>Contrast that to a typical day during the last sunspot cycle, where the S meter rarely dropped below S9 on the legal 40, while all the power stations play king of the hill and try to power over each other to work DX.<<

It doesn't sound like that at all..most of the time it's good DX with most waiting their turn....you only quote the exceptions, such as 6, where it has long been the biggest and the baddest..change the channel if not getting out frustrates you......also, you said "contrast", when what you did was compare.

>>Is it true
just because you say it is? I was there too. Maybe it's just that you went from that coat hanger to a real antenna.<<

>I've had a "real" antenna since about 1974, so that isn't an issue.<<

Correct...most of us don't share your "issues"..such as your venom for cbers.

>Look at this another way. Propagation is not channel specific. Why then is the average noise level on freeband channels so much lower than the legal 40? It's lower becasue there are not as many stations competing for the same bandwidth,<<

Take away your term "channel specific" and your argument crumbles. Amps are not inherent to DX, and propagation is not inherent to amps, but has a direct link with channel (freq) allocation.
It can not stand on it's own, therefore is discredited.

>and therefore huge amounts of power aren't required.<<

They're not required at all for DX. Point?

>The bottom line is that people using amps are a major contributing factor to the high average noise level on the legal 40 during peak skip cycles.<<

The bottom line is you are an angry little man, so much in fact, the trouble-brigade readily claimed you as their own for your efforts here against cb.

>Take away that power and the nosie would be much lower.
Dave
"Sandbagger<<

Mother nature is adjusting her power levels as we speak. Now you pink ladies have to go back to crying about talk of mods and amps.

Twistedhed wrote:
Considering that I've witnessed the last 3 skip cycles,<<
Last three? Somehow the math doesn't quite add up for you to actualy have been able to "experience" the first of the last three.

>The problem with math is that you can't solve for more than 1 variable. Evidently you're plugging in the wrong numbers. I was a witness to cycles 21, 22 and 23, which is starting its downward swing right about now. In fact I probably just missed the tail end of cycle 20 by a year or 2.<<

Then I won't point out how incorrect it is to believe "last" and "present" are somehow synonyms of each other. Blissful.

I can say for certain<<
Actually, there are many reasons why you can't "say for certain"....

>No, there aren't. You can argue things like type of antennas, or the quality of the radio's "S" meter. But what you don't know is that I still have the same radio that I had in the 70's, and can use it to make signal comparisons.<<

To who? Someone else that has the identical set up they had in the day? Here you go, assuming once again everyone else is operating under the same conditions they were during your war story days.

>Besides, we're not talking about small differences here. The difference in the sheer magnitude of interference from skip between the 70's and now is like night and day.<<

So is the population. Change is always the biggest enemy of cantankerous cb hating hammies. Why is change a thing that instills such fear in your heart?

>that the sheer level of a skip signal NEVER reached over +10db over S9 in the 70's, when most people ran barefoot, or "small" amps.<<<

Only the limitations of your gear at the time could support such a statement, or you were not actively participating at the time.

>>What limitations? I am talking about the legal 40 now. I'm sure that if you go far enough out of band, you will likely find a frequency that is devoid of power stations, and a comparison between the 70's and now would yield little difference (Static is static). Heck in 1977, my home channel was channel 6, along with a great bunch of local people. We could have conversations over the skip, when it rolled. Today, I

routinely see signals of +20 or greater on channel 6. Don't tell me it isn't worse now.<<

To YOU it's worse. To many of us, it's a thing to embrace. Not everyone shares your disdain for cb or channel 6..in fact, you are the minority here.

>The max signal (and noise) level has risen proportionally in the succeeding cycles due to the pecentage of people now running amps,<<

Oh man! Not even close. It is the intensity of the sunspots that is responsible. Take your superstitions on over to alt.legends or to snopes.com.

>Hello!<<

Hi!

>The magnitude of the sunspot activity of this past cycle, is no greater (And in fact less) than the last cycle. The data is posted on the web, if you don't believe me.<<

You mean frequency or intensity or both?

>And besides, even if the sunspots were significantly greater, to state that running high power makes no difference in the amount of skip interference is like saying that running an amp does nothing to your transmitted signal. That's pure baloney.<<

Never claimed it made NO difference...this is the beginning of another back-pedal and attempted redirect from you. What I took issue with, as you are very well aware, is your staement where you claimed they are THE reason for the noise.
That's pure balogna.

>If a barefoot station gives me a S7 signal, and running power, he's +10 over S9, then that's an increase.<<

Increase in what? You erroneously and automatically assume it's an increase of his output? It may very well be conditions......and going by your statement it is safe to conclude you are referring strictly to local conditions, which in itself contradicts your hype concerning national noise.

>Factor in the amount of people that routinely run amps whether they're shooting skip, or trying to power over it, and the amount of "RF pollution" will be higher no matter how you cut it. That's just plain common sense.
Dave
"Sandbagger"<<

common sense is nothing more than a belief held by a large group of people, and has little or nothing to do with the true nature of things at times.

> completely removed.

As stated already he has made swr measurements on these channels, why in
gods green earth would he check the swr with antenna removed?
Don't you think this would send the swr needle all the way to the right?

> However, if the SWR is that high, you sometimes can't tell which
> direction to go.

Perhaps you can't, there are simple solutions to try as stated earlier add a
piece of wire to see if this brings the swr down.

> Another reply made mention of out-of-box failure of the antenna -- for
> a cheapie Cobra mag mount; I'd blame that first.

Why would you blame the antenna first? What would be the first thing to go
bad in it? Coax?

> Fastest solution; take it back; get another.

Stupidest Solution Take it back, what happens when he takes it back and
still has the same problem with another antenna what does he do take it back
again because thats what you would do blame the equipment. He has a few easy
choices and may take all of about 5 minutes to do. Move the antenna around
on vehichle and see if this changes SWR, he also stated the swr was better
on channel 1 so by adding a piece of wire to see if the whip need to be
longer is another "free" simple solution, perhaps he has not calibrated the
meter correctly. Why go and take the antenna back without running a few
quick and easy test.

>>Which is eventually anyone that you find yourself on the opposite side of the table from on any given issue.<<

Not at all. Only those that call names and insult, showing their intelligence level, or lack of.

(such as yourself). If you can find a single post of mine where I began insulting someone or was rude to someone for no reason, post it unsnipped with the post it was in reply to.

>Your feeble justification<<

Justification is what you seek from me, you have asked for it several times concerning why all cbers do not get licensed. My failure to provide one has resulting in you manifesting one.

>for your own transgressions, does not negate the action. The "He started it" defense isn't going to cut you any slack.<<

Again, if you do not like my demeanor, feel free to cease your insulting nature at any time, if you can somehow muster the self-control.

..same with your false
accusations and lies you were reduced to hurling concerning me having a problem with hammies,

>I'll borrow one of your statements here, since I don't feel like typing it myself.
It's not an accusation, it's an astute observation, and an accurate one at that. This is supported by your introduction of insults, name calling, and repeated frequency of use of such tactics.
Your behavior is consistant with the scenarios that I constructed.<<

You finally see yourself as others do. Was that so hard?

You are not qualified to make such a statement. Your technique with "construction" is flawed.
>I'm as qualified to judge your character as you are to make generalizations based on your own feelings.<<

Your logic is convoluted. One doesn't need to be qualified in any way to form an opinon. You again poorly attempt to put your opinions across as something tangible, illumminating your delusional and grandiose nature.

>I also note that you haven't denied any of it, only made an issue out of me calling attention to it.<<

You brought the "issue" to my plate and now you are crying because the arid stink from where I dumped it in your lap caused a permanent stain on your dress.

>Only to the losers on this group.
Which includes anyone that doesn't agree with you.<<

HEheheh! Ask Jim for some pointers in diplomacy, or JerryO. I have disagreed with both on issues, sometimes some very heated discussions, and neither have lowered themselves to the excretement level of which you enjoy wallowing. AFraid all you have said is bullshit, and your personal problems and issues have made you incapable of carrying on rational converaations. It is also readily apparent you are extremely angry with me and your sole attempt is now to vent your anger and direct it toward me. Someday, when you grow up, you may understand how to conduct yourself in a public forum with out drawing ridicule. There are several hammies present who you should watch a little more,and learn from.

Depends a bit on how it is measured. An AM signal does have a PEP or peak
of 4x RMS carrier but the RMS ratios are 1.5:1 and only that if fully
modulated.

Ok, thanks for all the replies. I think I have most of it.

First let me reiterate- this is a temporary antenna, I don't care if it is not perfect, I have ordered a Firestik II kit (4 ft Firestik, 18' coax with connectors, 3 way bracket and a spring) and a quick disconnect from Valco Electronics. Great prices, BTW, $27 for the kit and $9 for the disconnect.

Last night, thanks to info read here and elsewhere I modified the system slightly. First I shortened the ground wire from the radio from 5 feet to slightly more than 14 inches. Using my multimeter set to 1 ohm I then verified that my ground connection from the antenna connection to frame was as clean as probe to probe. I then examined how the coax was laying in the car and rerouted it slightly.

I then drove out to a shopping center near home, and parked in a corner of the parking lot, at least 200 ft from any buildings and 50 ft from the nearest car. Now my SWR readings (after adjusting for length, easy enough with these whip antennas with the allen screw) are 2.4 on 1, 2.1 on 20 and 2.3 on 40. I know these are not great, but they will do until I get the Firestik installed in another week.

Mark

Rec.Radio.Cb Fear factor (Second Round)

Announcer: Ok, just a recap, we are down to two contestants. Frank bowed out after having an
Anxiety attack and hunger pains. Now on with the next challenge, contestants are you ready?

Aaron: Yes, but I still didn’t get that person name and address on channel six so I can send him a copy of
Part 95 of the FCC rule & Regulations.

Announcer: That’s ok Aaron, maybe after the show.

Aaron: I also wanted to turn him into the FCC for swearing, using an amp on the Citizens band Radio.

Announcer: (sounding like Dr evil) Right!

George: Shut the F#!k up Aaron, you flaming fag Homo, c!*ksucker.

Announcer: Calm yourself George. Ok your next challenge scenario will be like this: There will be a
Listening station exactly 5 miles apart from each of you, your challenge will be to try to talk to the station at the same time. You each will have the exact same radio, a Galaxy 99. Same antenna array. The person
That is able to talk the longest in a 5-minute period move on to the final challenge.

Aaron: I can’t use that radio, it’s an export radio and I have made a promise to God & my family too never
use that type of radio.

Announcer: If you don’t, George wins.

George: F*%king pussy boy, don’t do it, yeah I’ll win.

Aaron: Well ok, but I’m doing it under duress, and wish it to be duly noted so I don’t get in trouble. daddy’s sorry Ludmila.

Announcer: ok, gentlemen to your stations.(the sounds of both contestants heading to their posts.) Now
What both contestants don’t know yet is the person manning the listening post is none other than
Moparholic and to through a another factor in, we have Pain Killer sitting the exact same distance away
with 5 kw. Gentlemen, start your transmissions!

Aaron: Break 19, break channel 19 please.

George: Hey, all you stinky smelly c*&k sucking trucker shut the f%$k up, I’m talking here.

Aaron: again, break channel 19, break please.

Pain: I’m sorry the number you have reached has been disconnected, please hang up and try again
(Snickering & laughing in the back ground)

Mopar: I can’t hear youooooooooo! Go sterling, go.

George, hey who is that saying the # has been disconnected?

Pain: PainKiller in the 5K mobile.

George: Ah you piece of Homo queer Texas dog S$#t, shut the F*&k Up before I find
where you are and attempt to kick your ass!

Aaron: Break 19, break channel 19 please.

Mopar: I still can’t hear you two, pump it up.

Aaron: Pain, you are in violation to Part 95, sub paragraph blah blah blah. As a ham
You should know that.

Announcer: Stick to the challenge Aaron.

Aaron: I can’t there is a violator on the airwaves and I must try to turn him in.

Pain: BBBBWWWWAAAaaaaaa HHHHHHHhHaaaaaaaaaa, you guys are a joke.

George: That’s it, I’m going to get into my Pacer and find your faggot Texas ass.

Announcer: George if you do that you will lose.

George: F*&king faggot announcer.

Mopar: BUUUUZZZZzzzzzzzzz times up, we have no clear winner.

Announcer: No clear winner, they both advance to the next round

George: What the F$#k you mean no clear winner, I beat that pussy Viking bitch ass.

Mopar Keys the mic: You are right about that George, he is a bitch
(Laughing in back ground)

Aaron whimpering: I can’t believe I used an export radio and still couldn’t get out
(insistent crying) I’ll be ok, I just need to troll the newsgroups and I’ll be ok.

George: Quit you crying you faggot Homo queer Viking.

Announcer: well folks it look as though it’s going to come down
to the last round.
Stay tuned, we will have an exciting final round for you to veiw.

(Back ground noise) Mother F&%king Pacer won’t start, must have
built by
some faggot queer knob gobbler in Detroit.

Why do you have a seperate ground for radio? The radio should recieve its
ground thru the battery - connection. Moving your coax around in the car
should have no effect on your SWR

> Firestik installed in another week.

Mark, why not try a longer/shorter length whip, or moving the magnet/antenna
around on the vehicle? This is a good chance for you to learn why your swr
is not lower and what you can do to affect it.

Ah yes, natural law. That's the law that gives one the right to kill
anyone else simply because the victim left themself open to attack
simply by turning his back. You are correct, twistie, that's the way
nature works, but that's why people invented CIVILIZATION. Now crawl
back into your cave and continue with your animal paintings.

2321. Twistedhed's Court Of "Natural Law"!

Newsgroup: rec.radio.cb

Up is down....black is white...wrong is right....welcome to......

TWISTEDHED'S "NATURAL LAW" COURTHOUSE!

Twistedhed: This court is now in recession. Please come to disorder.

Baliff: Your Honor, the first case is a young man accused of taking an old lady's purse.

Old Lady: That's right. He hit me upside the head and done took my purse! He nearly kilt me!

Young Man: Yeah I did it! Hey, she all old and wrinkled up! Why she need money? An' besides, if she don't wanna be attacked -- why she walkin' all alone at night?

Twistedhed: (consults lawbook) Well, let's see. According to "Man's Law" what you did is considered a felony and punishable by not less than 3 years in prison. (shuts book) But I think here we have a case where "Natural Law" supercedes "Man's Law". This old lady is weak and defenseless, so naturally she is going to get attacked and have her purse stolen. That is just nature's way. And in fact she was walking alone at night. Is it any wonder you attacked her? There are many, many such attacks on old ladies in that neighborhood. The attackers are ignoring Man's Law and following "Natural Law". Therefore these attacks are right. We shall allow them to continue. (bangs gavel) Case Dismissed!

Young Man: Heh heh. Thank you Judge Twistedhed.

Twistedhed: Baliff, bring in the next case.

Baliff: Your Honor, the second case is.....Robert Blake!

>No, not really moron.

Yeah, right. Now I know why you keep trying to pull my chain about my
weight. The problem is that you don't have any self-esteem yourself,
for whatever reason (probably way too fat from pounding those Big
Macs), and you need to compensate by slamming everyone else's flaws.

Well, here's a lesson for you, Randy. No matter how fat or ugly I am
or become, I will always get the girl. Why? Because I see something in
each woman, something that makes her unique and special, and I make
sure she knows I see it. I make her feel that she is important, even
if she doesn't think so herself. I drive a nice, big, clean car with a
big seat, because that makes her feel thin and pretty. I keep the CD
rack full of Bobby Vinton, Neil Diamond, Kenny Rogers, etc. If I have
money I use it, but if I can't afford Lobster, I will improvise using
whatever resources are available. Can't afford the club afterward?
Don't stop by the local kegger at Billy-Bob's, take her dancing by the
river instead. She doesn't care how much you spend, but how much
effort you will make to make her feel special. Have a midnight picnic
in the park. Walk up a hill just to pick a flower. An handmade card
with paper flowers cut and glued from construction paper works better
than store-bought roses every time. But never, EVER, under ANY
CIRCUMSTANCES, buy her a happy meal for her birthday -- that's just a
cheap and tacky thing to do!

>> > And I've had a few
>> >adult drinks with the meal, so I really don't care to debate with you at

>
>You'll wait until I say you can quit waiting.

I'll wait until you answer the question. You seem to have an answer for everything else, and you troll my posts half the time anyway, so what's the problem? Come to think of it, this isn't even a new question, it's just a demand for an explanation of one of your previous answers. Even Dick, whom you quoted with your statement, provided an explanation to help you along. So what's the problem, Randy?

Announcer: Ok your next challenge scenario will be like this: There will be a Listening station exactly 5 miles apart from each of you, your challenge will be to try to talk to the station at the same time. You each will have the exact same radio, a Galaxy 99. Same antenna array. The person That is able to talk the longest in a 5-minute period move on to the final challenge. Now What both contestants don't know yet is the person manning the listening post is none other than Moparholic and to through a another factor in, we have Pain Killer sitting the exact same distance away with 5 kw. Gentlemen, start your transmissions!

PAINKILLER AND MOPARHOLIC PROCEED TO JAM AARON AND GEORGE.

Announcer: Ha ha ha. We've just humiliated you guys and proved how much better keyclowns are because we have more power.

Aaron: Not quite.

FCC Agent: (kocks on door) Mr. Pain?

Pain: Uh, yeah?

FCC Agent: We have tapes and DF plots that indicate you have been jamming on 11 meters. (peeks thru window) Is that an amplifier?

Pain: Uh, no, it's a, uh...TOASTER.

FCC Agent: Ha ha, very funny, we're confiscating it. Here you go Mr. Pain (hands him a document) this is a NAL (Notice Of Apparent Liability).

Pain: (reads it) TEN THOUSAND DOLLARS!!!!?????!!!!!!

FCC Agent: Have a nice day.

Pain: THIS CAN'T BE HAPPENING!!!!!

FCC Agent: Is Mopars house right or left at the intersection? Never mind, we have a map.

Aaron: Well, I guess I lost the challenge, but Pain and Mopar got hit for 10 grand apiece, heh heh. Makes you wonder who the real winner is here.

Announcer: You guys....SUCK!

I'm looking to fix the receive in my 148. It has low signal strength for ex: My other radio's read a S-9 signal, i switch over to the 148 and if im lucky its between 3 - 5. Soneone said i should replace my front end and something about Schottky Barrier Diode's that would help the receive. My question is, what are the part numbers/board numbers i need to replace? This radio at one point did receive like no other 148 i've owned before, so this is a little disapointing.

Any help? I would prefer email repy's but either way is fine :)

> "Sandbagger"

Dave, I'll grant you that there is some increase in signal level in the received end when the transmitter is amplified, but not nearly so much as you wish to believe. The old S-unit/DB formula still holds true with DX. It is not linear.

Back in the mid 70's(remember leisure suits?), I was a member of a SSB club, and most members used amplifiers, as did the majority of the CB world. I really don't know where you get this notion that the reason that you can't talk across town is all amplifier related. All sunspot cycles are not the same...some are stronger than others, and all meters don't read the same. I seriously doubt you are using the same radio that you used in the 70's or any cycle since.

>Says who? The law? Natural law always supersede man's law.<<

>>>Ah yes, natural law. That's the law that gives one the right to kill
anyone else simply because the victim left themself open to attack
simply by turning his back.<<

A conscious act is no comparison to nature's law, such as gravity. One
can choose whether or not to "kill". One can not choose to have gravity.
Likewise, one can not choose whether the DX is running. Speaking of
killing, attacks, etc.,,,you have an anger problem.

>You are correct, twistie, that's the way nature works,<<

We are speaking of an intagible force of nature, (gravity, DX, etc.)
not predatory actions of beasts or other living things, but somehow, you
believe the two to be interchangeable. It may possibly be the
frustration over the lack of control of such natural laws (DX), that has
you comparing your savage, conscious thoughts to those of which you are
impotent to control.

>but that's why people invented CIVILIZATION.<<

The legislation is a joke and you know it.

>Now crawl back into your cave and continue with your animal paintings<<

You're just mad 'cause it used to be your cave. Now that I blew a hole
in the roof to let some light in, it is a swell grotto and you can't get
past the entrance! : p

Are you saying the CB's negative should be wired directly to the Neg terminal of the battery? I have not done that, it is grounded to the transmission tunnel. I have also tapped the Cigarette lighter fuse for my power supply. The radio works fine. If I was to wire directly to the battery what gauge should I run? 10 or 12? Is it going to make that much difference? The installation instructions for the CB did not say to wire it to the battery.

>
>

I tried adjusting the whip to its maximum length and the SWR was higher on 40 than 1, which just told me I needed to shorten it. At least it is currently functional, and we are driving to Reno tomorrow (from San Francisco) so I will have it if I need it.

I'll tell you a joke, twisty. Two guys walk into a bar. One guy is 21 years and a day old, and the other is 1 day short of 21 years old. The one that's old enough sits down and has a beer. But the underage guy is refused. What does he do? He cries and whines, puts up a fuss, throws a tantrum, blabbering about how the law is so unfair to him. He eventually pisses off the bartender so much that he is arrested for disturbing the peace.

So what's the joke? For the small sacrifice of waiting one more day he could have that drink legally, and without all the fuss, and probably without going to jail. Do you see the analogy, twist? Or do I have to draw you a picture?

Pure spectulation. Where's your proof, Randy?

> The old S-unit/DB formula still holds true with DX. It
>is not linear.

That's your proof? The noise contributed by amps isn't much because
the decibel scale isn't linear? Is that from one of Dick's posts, too?

>Back in the mid 70's(remember leisure suits?), I was a member of a SSB club,
>and most members used amplifiers, as did the majority of the CB world.

I don't know which part of the world you lived in, but it wasn't the
majority. Back then I knew very few CBers that owned amps. Most of
them had licenses, too.

> I
>really don't know where you get this notion that the reason that you can't

Everyone knows amps on 11 meters are illegal. So what? So we have the holier-than-thou schmoes out there trying to convince us that we ought to change our ways. Look, I,ll make it real simple 4 u self appointed cops and monitors or whatever the hell u refer to yourselves as. We know the risks, if we take the chance, most of us are ready to deal with the consequences should the heat come down. I have respect for MOST hams, but I achieve the same results at a fraction of the cost. If I bleed a neighbor, all they have to do is knock on my door. We will work it out. I have been in the same area for quite some years and have no problems. If I am not hurting anyone, why the hell should you care WHAT I do? The bottom line is you shouldn't. Get a life. You guys that bitch about us freebanders and "peaked" radios have way too much time on your hands. I don't need to run anymore than 30 watts where I am located and I talk all over the world......yes.. on the freeband. Nothng pleases me more than one of you cb rambos to come in to my conversation and start preaching about rules. God, I love to squash you suckers.

Law-abiding citizens?

> We know
>the risks, if we take the chance, most of us are ready to deal with the
>consequences should the heat come down.

Most of you don't know that an NAL cannot be discharged in a bankruptcy. Doesn't help the financial situation for the family. Are you prepared for that? IOW, do you live within walking distance of the welfare office and the food bank?

> I have respect for MOST hams,
>but I achieve the same results at a fraction of the cost.

That's because you have only a fraction of the personal responsibility needed to run a legal station.

> If I bleed a
>neighbor, all they have to do is knock on my door. We will work it out.

Before or after you mistake them for car burglers or mushroom-picking college kids and shoot them?

>I have been in the same area for quite some years and have no problems.

How do you know you aren't causing problems for anybody else? Do you take a neighborhood poll once a month? It's not easy for some people to find out where interference is coming from. That's why I made the Twisty-Buster.

>If I am not hurting anyone, why the hell should you care WHAT I do?

Because you are not concerned with causing anyone else problems, you just worry about not causing problems for yourself. As long as you get your rocks off, you don't give a shit about anyone else. You have said so many times.

> The

Um, Randy...this is an open forum. And you still have a question
pending your answer. I'll repeat it just in case you missed it the
first four times:

How does one-way skip affect band noise any different than two-way
skip?

You made the claim, now back it up, Randy. Or do you need to read it
several more times so it will "sink in"? Or maybe I should type it
slower next time, huh?

2347. RCI-2990 Rotary Selector Problem

Newsgroup: rec.radio.cb
Date: 2002-04-26 01:18:52 UTC
From: Sluggo <dlp33@insightbb.com>
Message-ID: <0W1y8.6653$ao1.5242@rwcrnsc54>
Source record: 122212

I have a Ranger 2990 wherein when using the rotary freq selector it makes erratic jumps to the same freq, a higher or lower freq or to a different band altogether. The up-down arrow freq selector buttons do not exhibit this problem. Has anyone had a similar problem with the rotary channel selector on the 2990?

Thanks!

Once again....

Up is down....black is white...wrong is right....

welcome to......

TWISTEDHED'S "NATURAL LAW" COURTHOUSE!

Twistedhed: This court is now in recession. Please come to disorder.

Baliff: Your Honor, these two fellows are accused of looting.

881: It was like this your honor. The hurricane come and blow down all the electric wires and then the earthquake come and crumble the buildin's.

Peekaboo: So the store's open and all the stuff inside and no one to tell us not to take it.

Twistedhed: Hurricanes and earthquakes are forces of nature, that which we cannot control. According to "Natural Law" you did not commit any crime. Case dismissed!

881: Ha ha, Oooh Judgie, I like the way you operate.

Now this is interesting..

TR24 is an NPN DC Clamp to ground when activated by rectified RF passing thru 2 other stages. Pulling only the clamp could never interfere with the receive.
On receive it is effectively eliminated from any control over receive audio.
Doc, please help me understand your statement below....

I'd replace it...but if there is an intermittent connection, the OFF/ON pulses picked up by the processor are being counted along with the desired ones. Still since it does it UP and Down it should be replaced.

And maybe you should throw out your copy of "Mayor McCheese Dating
Secrets".

But anyway, I'll type this REALLY slow so you can comprehend it:

How does one-way skip affect band noise any different than two-way
skip?

Is that better? Is there any other impediment to your ability to
explain your own comment?

It ain't no secret. Use the money you would pay for a mod and get a
license. Then you can run a serious radio on many bands, not just 11m.
You don't have to deal with idiot freebanders and amp-junkies, and the
old lady won't ditch your ass when she finds out about that
multi-thousand-dollar fine from the FCC. What a deal!

Receive problems don't have "cookbook" solutions
because there are no high current parts. In other
words, the parts that are most likely to fail are the
ones that pass the most current.

You need to find a pro who can signal trace the
receiver, find the bad stage, and repair it. It
shouldn't cost more than $40 and the radio will
be just like it used to be.

Hi, all. Is there any way to add the FM mode to your average 40
channel

AM CB transceiver? I have read something about conversion kits for CB's,
but I can't

find the magazine anymore. I just purchased a Cobra 25LTD Classic which I

love! The radio I bought is JUST the classic, and does not have the
Weather,

Sound Tracker, Night Watch, or any of that new fangled stuff. I decided
not to

get that Connex, lol. If these kits do indeed exist, I will add it to my
base radio,

and not my new Cobra 25, hehe. I tell you what, these (Cobra 25) are fairly

good talking radios if all you want is a basic radio. I am not saying these
are the

best deal in radio history, just a good deal for the money. Well, thanks
for your

answers.

Yeah, I agree. English time, would that be all of them together, that are in
USA? And next time am "Important message!" is out, place at least what state
you are broadcasting from.

As if we really give a rats ass about talking to a high school punk
on an illegal frequency who is over 150 miles away and is using an
illegal mode for his country.

(Ask me if I care, wait, save your breath. And use your other hand
tonight so it doesn't get jealous.)

What? You mean having 2kw amps and 2 big coil antennas on top of their vans
brandishing their "mudduck" handle on the side with some fancy airbrush picture
doesn't give them that right? I thought it did. :)

Oh, that's a crock of shit, Bill. Crystals crack really easily,
especially PLL crystals. There are diodes and zeners throughout most
radios that will just go bad out of spite. Chances are that his
S-meter just reads different than the other radio.

I modified a Kriss "10" meter amp to work on 6 meters!
I had to reduce (tap) the output coil and make a new input coil (half the turns of wire). It works great on 6 meters abt 120 watts out (ssb) with 3 watts of drive

I can't tell you what it is that has to comeout that would be to easy but
you are looking at it in the wrong way they have been making those for years
(uniden) and the cobra com. so over the years theyhave ways to set up
these units that keeps it in check so it won't perform as well as you want
it to interesting isn't it and on the sams book it is the only line that
comes off the chip and goes to the other area on the board that doesn't
belong how would it effect the pll would it ?

Hi. Thanks for the info. I use FM for amateur use (mostly 6meter, though) and spent too much money on my Yaesu FT-100, lol. I would rather not modify the Yaesu for CB use, and thought I would try the FM mod on the Cobra. Luckily, I didn't spend too much money on the Cobra (bought it used), so maybe a Connex would be a better choice. Thanks for your help, guys. Much appreciated.

FM on CB is illegal even if you are a ham, but I'm sure you already
knew that. So what's your callsign?

Modifying the transmit for FM is easy. Modifying the receiver is a lot
more difficult.

2387. An interesting snippet from Ranger

Newsgroup: rec.radio.cb
Date: 2002-04-26 12:25:59 UTC
From: Jim Hampton <aa2qa@frontiernet.net>
Message-ID: <67deaf154f5b3024c94570a4321fa3bd.80792@mygate.mailgate.org>
Source record: 122251

Hopefully, no one will get offended. I just happened upon this and thought I'd share it with the group.

73 from Rochester, NY
Jim

Warranty Notes

We have noticed an increase in radios sent in for warranty repair that have problems directly related to the modulation limiter being clipped or removed. Radios sent back with this modification will not be covered by warranty. When you clip parts out of a well-designed radio, you can cause harmonics, which result in distortion. If you clip a part, then you have defeated the purpose for which that part was intended. This may cause related parts to go bad; thus causing the radio to perform in a way that it was not designed.

We made this decision after a hard analysis of radios returned for warranty and/or repair during a two month period. We even went so far as to fly both the top technician and engineer from the factory to assist us in solving the problems. The result of the analysis, and confirmed by the factory personnel, were startling to us - 87% of the returned radios were caused by the below modifications. This reflects a problem that is not with the radio or it's manufacturing process. It can also cause you problems with your customer, as when something goes wrong, they tend to blame you, your mother, father, your kids, and every one at Ranger - both here and in China! All because of something someone else did.

Here is the list of controls &/or components we found that are commonly de-tuned &/or removed by customers:
RCI-6300 Series: VR14 (AM Carrier), VR16 (AM Modulation), and Q39 (TX Audio Limiter).
RCI-6900 Series: VR15 (AM Carrier), VR17 (AM Modulation), and Q43 (TX Audio Limiter).
RCI-2950/70/90 Series: VR13 (AM Carrier), VR14 (AM Modulation), and Q32 (TX Audio Limiter).
RCI-2950/70/90 DX Series: VR15 (AM Carrier), VR17 (AM Modulation), and Q43 (TX Audio Limiter).

If the above components are removed or max-tuned, the warranty will be voided, as it is a bad practice and by doing these modifications can cause problems of spurious emissions and overheating.

So, let's start an education process. Tell your customers that over modulation causes the user and the radio to sound like crap. It overworks the components of the electronic device and causes the parts

to have premature wear and failure. Inform them that in accordance with good technical practice, you will not be a part of that kind of "butchering". You may hear some flack from them at first, but if you explain it to them correctly, they should understand. Plus you can show them the difference in the output signal of a clean sounding radio transmission verses an over-modulated and distorted signal.

Then explain that if they clip a part out of a radio, they have defeated the purpose for which that part was intended. This may cause some other or related parts to go bad; thus causing the radio to perform in a way that it was not designed. An example is the overheating problem caused by removing the TX audio limiter. It causes the power transistors to overheat and shut down or just burn out.

I think, together, we can help clean up the signals and cut way down on the problems that you encounter with these operators. If we can eliminate this one area of problems for you, we can free up the Ranger technicians to solving and repairing real problems.

And, if you are going to "verify" the "alignment and tuning" of a Ranger radio before selling it to a customer, let me remind you to please check all the features and functions of the radio BEFORE opening and breaking the seals. This way, if something is wrong, it can be taken care of in the fastest way possible. It doesn't take that long to check and it may save you some headaches. It also removes any doubt of whether the radio was at fault or something someone else did that caused the failure. Our actual failure rate of the radios is one of the lowest in the industry, so just take the time to check it out first.

Source record: 122254

From: sparky@cet.com (Sparky) I>CB isn't meant for DX.<<

Says who? The law? Natural law always supersede man's law.

>Ah yes, natural law. That's the law that gives one the right to kill anyone else simply because the victim left themself open to attack simply by turning his back.<<

A conscious act is no comparison to nature's law, such as gravity. One can choose whether or not to "kill". One can not choose to have gravity. Likewise, one can not choose whether the DX is running.

>And one can choose to get a license and not have to worry about skip conditions on CB.<<

Who worries?
Speaking of
killing, attacks, etc.,,,you have an anger problem.

>It's not anger, it's intolerance of stupidity.<<

Reaction to intolerance by sharing your violent nature is stupidity.

>You are correct, twistie, that's the way nature works,<<

We are speaking of an intangible force of nature, (gravity, DX, etc.) not predatory actions of beasts or other living things, but somehow, you believe the two to be interchangeable. It may possibly be the frustration over the lack of control of such natural laws (DX), that has you comparing your savage, conscious thoughts to those of which you are impotent to control.

>...oh brother<<

Using your favorite line:".you diidn't deny it so it must be true."

>but that's why people invented CIVILIZATION.<<

The legislation is a joke and you know it.

>I'll tell you a joke, twisty<<

Another OT? How'd I know?

>Two guys walk into a bar. One guy is 21 years and a day old, and the other is 1 day short of 21 years old. The one that's old enough sits down and has a beer. But the underage guy is refused. What does he do? He cries and whines, puts up a fuss, throws a tantrum, blabbering about how the law is so unfair to him. He eventually pisses off the bartender

so much that he is arrested for disturbing the peace. So what's the joke? For the small sacrifice of waiting one more day he could have that drink legally, and without all the fuss, and probably without going to jail. Do you see the analogy, twist? Or do I have to draw you a picture?<<

The underage guy really didn't want the drink, he just wanted to see IF he could get the drink.
Your analogies are ALL flawed, shown by your pathetic attempt at drawing a failed parallel between natural laws and conscious acts. As was pointed out to you by another once before,,, the only crying, pissing, bitching, moaning, throwing tantrums and.insults are from your type, Frank..who do you see bitching about the law? No one Frank, just you sucking in water instead of air.

>Now crawl back into your cave and continue with your animal paintings<<

You're just mad 'cause it used to be your cave.
Now that I blew a hole in the roof to let some light in, it is a swell grotto and you can't get past the entrance! : p

>Go away, trog.<<

("Wild Thing" plays in the background)
It's the impotence that upsets you.. work on your tolerance levels,, let go of those angry issues that make you intense and uptight, and relax.....and try not to sweat the small stuff.

2391. Tube amplifier theory?

Subject: Re: CBer's to be fined
Newsgroups: rec.radio.cb
Date: 1999/10/06
Everyone knows amps on 11 meters are illegal. So what? So we have the
holier-than-thou schmoes out there trying to convince us that we ought
to change our ways. Look, I,ll make it real simple 4 u self appointed
cops and monitors or whatever the hell u refer to yourselves as.
Law-abiding citizens?
We know
the risks, if we take the chance, most of us are ready to deal with the
consequences should the heat come down.

>Most of you don't know that an NAL cannot be discharged in a
bankruptcy. Doesn't help the financial situation for the family. Are you
prepared for that? IOW, do you live within walking distance of the
welfare office and the food bank?<<

   >> I have respect for MOST hams,
but I achieve the same results at a fraction of the cost.<<

>That's because you have only a fraction of the personal responsibility
needed to run a legal station.<<

And along comes your third and final strike attempt at drawing incorrect
analogies. How does the money in the station relate to the
responsibility?

>>If I bleed a
neighbor, all they have to do is knock on my door. We will work it
out.<<

>Before or after you mistake them for car burglers or mushroom-picking
college kids and shoot them?<<

If you're running through my fenced property at night and I get a shot at you, you're doing good, as you would be running faster than the dogs. I can tell by their howls and barks if it's a human and whether that human is a stranger or familar face to the dogs, or whether it's an animal on the grounds..
I have been in the same area for quite some years and have no problems.

>How do you know you aren't causing problems
for anybody else? Do you
take a neighborhood poll once a month? It's not easy for some people to find out where interference is coming from. That's why I made the Twisty-Buster.<<

That was a long time ago and I'm still here. You'd be better off not "making" anything else until you figure out how to make it work.

>>If I am not hurting anyone, why the hell should you care WHAT I do?<<

>Because you are not concerned with causing anyone else problems,<<

This is total innuendo bullshit from you as we have all come to expect. You know nothing other than what I allow you.

>you just worry about not causing problems for yourself. As long as you get your rocks off, you don't give a shit about anyone else. You have said so many times.<<

I have never said anything even close to the bullshit you purport. Whatsamatter Frank, grief counseling not working? Feeling bad so you need some company? Grieve and the world grieves with you? You need a better plan, 'cause most everything emanating from your sewer hole are untruths and deliberate lies....LMAO,..how's it feel to have such a shitty hand dealt in life? As I said before Frank, I believe what goes around comes around, and apparently you haven't heeded your first wakeup call from the good Lord. Perhaps he will touch your world again.

>>The
bottom line is you shouldn't. Get a life. You guys that bitch about us freebanders and "peaked" radios have way too much time on your hands. I don't need to run anymore than 30 watts where I am located and I talk all over the world......yes.. on the freeband. Nothng pleases me more than one of you cb rambos to come in to my conversation and start preaching about rules. God, I love to squash you suckers.<

>That kinda wraps up your whole attitude.<<

To those like you, it certainly does.

Gettin'
WAY-UP from the sandpile

Many of us live for long distance DX.

>As you said before, "get a life".< <

While on the radio, Frank, while on the radio, but youcan exert plenty of impotent energy to take it way out of context and try to give it another meaning, since that's what you did with the thread and post you took my post from. But considering the source, it's quite entertaining...you spend the majority of your life on this board thinki9ng someone actually gives a damn about who you are.....the rest of your time is spent dressing up in drag, looking through ancient posts (THAT is too funny), and you tell someone else to get a life....AHEEEEHAAAHAAA! And Gee, Frank, you really are flailing your arms here and are all over the place and haven't accomplished anything except to share your anger and frustration levels because of your impotent ways. Now go ask for forgiveness so some light shines on your pagan azz!

>IF you have a problem with his
mode of operating, tell me what frequency and time you will be on. If this poor kid can get you riled by asking to talk skip(GASP!) I can't wait till you hear me. Pick on someone your own size. I'm ready to key all over your whiny, sniveling ass!<<

>>With a whole 30 watts! That must be "bird-watts", huh?<<

If you would have presented the post in it's entirety instead of the diabolical snip jobs you attempt (yet continue to fail) you may have your answer. Taking and isolating anything out of context and presenting it to a separate application is bound to change it's meaning, but then again you appear to take delight in such intentional, frivolous, trifling, acts.

Well Good Luck on the Future install.
I did notice on a previous post that you had your
power running from the cig lighter. I would recommend
that you run a fused at both ends 8# wire from the
battery to the radio. That will give you ample of
power for your radio.

Mark, no flame intended, but you should check out the post I made entitled 'an interesting snippet from Ranger'. Radios and amplifiers (well, some amplifiers) are designed for a specific frequency range and modulation types. Although they may well be modified, please understand that engineers were paid to design them properly; any mods made to the aforementioned devices are entirely at your own risk (i.e., you may end up with distortion, a wide signal, rfi, or smoke). You might well want to reconsider.

You are half right, twist. This IS a CB forum. But "freeband, amps,
DX, slow scan, etc." are not CB. They either belong to other radio
services or they are illegal.

I finally had a chance to mess with the Ranger 2995 DX for 2 nights....converted only (not peaked or tweaked), it sounds ok on 11 meter so far....didn't do much AM, mostly SSB....
I'd like to hear another one to compare.....it's being marketed as a dual band (10 and 12 meter) radidio....

Separate the turns of the tank coil.
This will require more capacitance to resonate.
If the amp is worth keeping but still wont tune then
remove one turn.

Remember tuning lower requires more usually but you're trying to
pinpoint a particular mechanically related resonance.

The2x4

Then you weren't looking for the problem hard enough. Over the years I have had a lot of radios, and not just CBs, come in with the complaint that receive keeps fading out or that it isn't receiving as well as it used to. The problem is that when the crystal goes bad the pll will work but it will drift with heat and/or time. You need to stick the radio on the counter for a couple hours BEFORE you align it, because just aligning it without checking crystal integrity just covers up the problem.

If you want proof of what I say, go find yourself a few of those old 23-channel/14-crystal radios and check the frequency for each channel. At least half of the channels will be off by at least 1kHz, and a few will be off by 5kHz or more.

Hopefully, someone WILL get offended. It's OUTRAGEOUS that Ranger
(RCI) has been knowingly targeting/making a big profit from the 11
meter crowd for YEARS -- and now they have the GALL to bitch about how
CB'ers behave.

> We have noticed an increase in radios sent in for warranty repair that
> have problems directly related to the modulation limiter being clipped
> or removed.

Well, DUH, what did they expect? Ranger loves black-market CB profits
but they don't even want to acknowledge that their CUSTOMERS are
actual CBers. And CBers clip limiters and twiddle tuning slugs and do
all kinds of crazy things. Educate 'em? Good luck.

This has been my personal amp for many years and is in very good operating condition. Uses 8 12DK6 tubes (I just checked the price on these.....they are $12.00 each).
This IS an AM and SSB unit!
Amp on low w/ 2 watts in D/K is 50 watts swinging 600.
Amp on high w/ 2 watts D/K is 100 watts swinging 900. Measurements were taken yesterday using a Galaxy Saturn II mobile radio, Heathkit Cantenna dummy load,
and an Autek WM-1 peak reading meter.
Price is $450.00 plus shipping.

There are different "channel maps" for different PLLs, assuming the mod is done correctly. Some PLLs have more than one mod, and therefore more than one channel map. Considering the person that did the mod or had it done was too lazy or too cheap to get a license, those "channel maps" could mean just about anything.

For example, I had a TRC-490 come in today with just about every mod done to it -- twice! They had the right PLL crystal in there for the mod, but the loop was never aligned. Result: this puppy was putting out above 30MHz with a throw of the switch. Not only that, they bypassed the tuned output from the final! Real bright folks, these "mod experts".

> new ones???....Mark
>

OK, having let this cow patty sit in the pasture a while and let off some gas and steam, let's talk about pi-section filters. Most of this is covered rather well in Chapter 13 -- RF Power Amplifiers in the grand and glorious Radio Amateur's Handbook which I recommend in preference to listening to me any day of the week.

First off, few amps in the ham bands ever see 10 or 12 meter use because power is basically useless on these bands. So most new amps never have the kit sold with them and are often available NIB because they never were installed. The question is interesting rhetorically but has little or no practical significance. The manufacturers noting this tend toward some cheesy ways to make them work on 10 at all for the show value and that is the root of your problem. I would also suspect your driver is not among the cleanest nor your antenna a particularly decent 50 ohm load on 11 meters but the major problem is that it was a marginal design at 28 MHz and no better one at 27.

Now I don't have a clue what you are using so I look up the pi-section tables and find the following little factoids for a target Q of ten which is often far less than you blunder into by accident above 20MHz.

Plate impedence 1500 ohms:

Freq Input cap Inductance uh Output Cap Q

28 38 0.91 179 12
26 44 1.06 207 12
21 52 1.24 243 12

Plate impedence 2500 ohms:

28 35 0.98 222 18
26 35 1.29 215 16
21 35 1.78 198 13

You can make a good guess at the input impedence to the pi-section by simply calculating the R = E/I of the amp's peak and multiplying it by .65 in AB and again by .9 if in Class B.

As it happens, 35 pf is generally the minimum of a variable and that doesn't take in tube capacitances, assorted stray capacitance, and

reactive components in the antenna so it is going to be pissy under any conditions. What is unusual about your case is that you run out of capacitance on the low side.

Now from the table, it is apparent that a lack of inductance is the problem and the simple cheap and dirty solution is to move the blessed tap because you are not going to ever use it for 10 meter FM in your lifetime. Scrunching the coil will more than likely affect all bands and qualify as 2nd degree butchery. Odds are the factory did this to prevent 11 meter use and like most delayed fuses it blows up at inconvenient times. And a scrunch increases the internal capacitance of the coil and may well be self-defeating.

There is another interesting effect of pi-sections called circulating current in the inductor. At 500 watts #8 wire or 1/8 tubing is considered minimum at 28 MHz going to #6 or 3/16 tubing at 1500 watts. If you have a commercial amp with that size coil I will be damned surprised. Remember what I said about cheese? Odds are it is at best #10. It is not only the tubes that take ventilation. I will also bet the taps are mechanical and soldered; hot coils tend to unsolder themselves. Running an amp on 75 and 20 meters is both a lot easier and a lot more rewarding than doing it at 27-28 MHz.

It's your amp and you can and will do what you want but a clamp and a bit of soldering make a whole lot more sense to me.

Why not just re tap the coil. or remove a little less than 1/2 the coil to
go from 10/11 to 6 meters

Just remove almost 1/2 of the original coil and re attach the tap, or just
retap at the 1/2 way point. it should then tune like a champ.

2439. Drunk in a bar...

Newsgroup: rec.radio.cb
Date: 2002-04-27 00:47:28 UTC
From: MarkBeck666 <markbeck666@aol.comSpam>
Message-ID: <Aymy8.220577$K5.17860239@bin5.nnrp.aus1.giganews.com>
Source record: 122304

A man walks into the front door of a bar. He is obviously drunk, and staggers up to the bar, seats himself on a stool and, with a belch, asks the bartender for a drink. The bartender politely informs the man that it appears that he has already had plenty to drink, he could not be served additional liquor at this bar, and could a cab be called for him?

The drunk is briefly surprised, then softly scoffs, grumbles, climbs down off the bar stool and staggers out the front door. A few minutes later, the same drunk stumbles in the SIDE door of the bar. He wobbles up to the bar and hollers for a drink. The bartender comes over and, still politely - but more firmly, refuses service to the man due to his inebriation, and again offers to call a cab. The drunk looks at the bartender for a moment angrily, curses, and shows himself out the side door, all the while grumbling and shaking his head.

A few minutes later, the same drunk bursts in through the BACK door of the bar. He plops himself up on a bar stool, gathers his wits and belligerently orders a drink. The bartender comes over and emphatically reminds the man that he is clearly drunk, will be served no drinks, and either a cab or the police will be called immediately.

The surprised drunk looks at the bartender, and in hopeless anguish, cries "MAAAN! How many bars do you work at?

Interesting point, but I've a BIG question. How many radios have NO components nor subassemblies manufactured nor assembled in China? I presume a few - for now. One of our guys went over to help set up a factory in China. They go out in the street and point - 'you, you, you, and you. You will be mechanics'. Yep, and with all of six weeks of training. Why pay $50,000 for a mold when you can get one made in China for $5,000? Of course, the steel is substandard, the work is substandard, and the parts that come out of them .... so, as Americans are out of work, we have junk manufactured for us. How many of us older guys remember when Japan was known for junk? Guess who makes the television, radios, cell phones (not all), etc? And guess what country is putting out junk. Did you see where Japan now has the world's fastest computer? My gut feeling is the Japanese language is the only thing that has protected our PC industry. Of course, Taiwan and other countries of the 'little dragon' are manufacturing a lot of the stuff. So far, a lot of design still originates from our country. But when the pay a newly minted MBA 30% more (or even more) than a newly minted PhD in an engineering discipline .... OUCH! Then again, look how much more money a creative accountant can make for a company (or should I say for a few CEOs?).

Sigh ..

Oh, OK. That makes a HUGE difference. So if Pain is using 5 KW to
deliberately jam two people he doesn't like with the intention of not
allowing them to communicate (as was written in your scenario) then
why do you think this type of behavior should be tolerated on CB?

>YOU ALWAYS TRY TO MAKE

The "a" channels are Canadian freqs. where they say "eh?" ! Actually it's 3a, 7a, 11a, 15a, 19a. These are the only ones for ALL radios. Same frequencies for ALL radios. If your radio don't get it, it don't get it! IS this what you asked?

Dick, I'm getting old. A lot of stuff was obvious; I hadn't even considered the circulating currents. Heh heh ... back in the early 70s when I was a tech at a commercial radio manufacturing concern, the taps on coils in the matchboxes used a high temperature solder. Most certainly this was not to protect them from the heat in the desert. This was to protect them from, as you so aptly put it, 'desoldering themselves'.

;)

73 from Rochester, NY

They certainly will today but this may not always have been true. Of course 12 meters did not exist even in theory until 1976 so a manufacturer would not even think of it on older units. And in the interim the jolly folk at Eimac came out with some tubes that made life a little easier on the amp designer.

Where a 4-1000 in AB2 would do it at 4kv and .6 amps (plate impedence on the order of 4500 ohms) a 4CX1000 would do it at 2500 volts and an amp or about 1500 ohms. The ceramic tube is one hell of a lot easier to build a pi for that does not have a Q in triple digits. In fact, I am not sure but what the old tube would require a double conversion like a Pi-L to get to 50 ohms on any practical basis. The 3-500Z, a pretty usual suspect today, would do it at 3kv and .75 amp (two tubes obviously) or about 2200 ohms which ain't easy but can be done with a pi; it would require a separate tap more than likely for 12 meters which is good practice anyway.

This is at least part of the reason the four 811 array was so popular in the kw input days, 1250 volts at 700 ma makes life a lot simpler. Thank Zeus for solid-state rectifiers and thin-film moose electrolytics to build the power supply from; those 866s glow funny.

In the beginning they were 'RC' channels. Model airplane and such.
They were at frequencies ending in 27.x45 or 27.x95
The only 'A' channels were 22A, now Ch24, 23A now Ch26 and 23B, now Ch 27.

I agree. However, they require a few good mods,
and don't expect more peak power than you can
get out of a 148 (a single final multi-mode radio).
The biggest problem I see with them is the non-
linear mic gain control. Also, there's so much
mic gain that it's easy to end up with transmitted
audio that sounds badly distorted--even with the
stock mic--and especially on AM. A simple fix
is to run a 75 ohm resistor from the wiper of the
mic gain pot to ground. That and a good tune-up
nets you a really nice radio for the money.

From: w8ems@juno.com
Message-ID: <59af69d5.0204261944.37283baa@posting.google.com>
Source record: 122326

The orignal "A" channels were the "class C" citizens band frequencies used for remote control. If you look at a list of frequencies for the orignal 23 channels you will find that there is a 10 KHz space between most channels, but a few have 20 KHz spacing. This extra space is where the "A" channels were. There were two spaces between channels 22 and 23 and some radios had channel positions for 22A and 22B, which are now channels 24 and 25 on 40 channel radios.

Hope this is the information you were looking for.

Tuners are a bitchkitty. A lot of people used to the rarified atmosphere of CB wonder what hams do with 3kw tuners. The answer is to run 200 watts thru them and load things that are convenient but have a conjugate match from Mars. Your employer was not interested in getting units back and lawsuits from fire insurance companies.

Someone should do a history of horizontal outputs in TV sets and the development of the sweep tube from the 6BG6 on a 17 inch screen on up. At various times, they had parasitics (the infamous Barkhausens) and major stupidities. When octal tubes were the way, you would often see pins unsoldered by heat. The expansion/contraction cycle was so severe that they would use a 'beartrap' socket to keep the tube from being spit out like a watermelon seed, Ptooi. Later ones ran the pins out of the glass because the bakelite bases could not take the heat.
When the 23s came out, no one under 21 could be in the room with them because loose transformer laminations put out a 15.75 kHz whistle that drove youngsters out of a room.
Ah the good old days.

And some still wonder what the funny bead is on the collector pin of the HO Transistor.

Oh brother, more tech voodoo from Eitner. A non-linear pot isn't going to make any difference. The reason it's called 'non-linear' is due to the change in the resistance ratio in relation to the wiper position. If the resistance ratio changes in direct proportion to the wiper position, it's called "linear", and if it doesn't it's "non-linear". Either way, once the thing is set it is just a couple of "fixed" resistors, which are neither linear or non-linear. So a non-linear potentiometer isn't going distort your audio any more than a linear pot. But a non-linear pot has an advantage because it works more like the human ear, allowing smoother control at lower volumes. That's why there is a special type of non-linear pot called an "audio taper".

I wonder if Bill gets paid to shovel all his techo-bullshit...

That kind of threw me, too. A frequency drop would cause a lower Z on the coil which must be met with a higher Z on the cap, i.e, more mesh. Something sounds kinda goofy.

I think it goes a little backwards. The channels were not called 3a, 7a, 11a, etc until CBers started modifying their radios for illegal operation.

These things should tell you something about me. I am a driven individual.
When i desire to do something, I get it done. Why should I look at the sale
of this unit differently than I would anything else in my life?

Hello 2x4:

Yes they where.

The guys who put the D&A amps together where also good.

After doing some reading up on Elkin amps, I have concluded the same. These
things were built to be swing monsters. I know the 4 tube model has been a
long time favorite as a driver much like I use my 4 tube
Elkin.....Hitting a slightly modified SB-220.

> Something sounds kinda goofy.
>

Pi-sections can be kinda goofy because they are both a resonator and an impedance transformer as well as a lo-pass filter for grinsies. As freq goes down, both C and L increase if the job is to be done well. If you noticed the table I threw in the real problem with higher impedance circuits - more volts, less amps - is to get the actual capacitance low enough to tune at all. Or the Q is so damned hi that it tunes but you never know it; you don't have a tank you have a notch filter.

Depending on the plate impedance being matched, the coil gets more critical and its size increases more rapidly as plate resistance goes up.

What I think we may have here is an oldie but goodie going back a few years when plate impedance's were much higher and tanks at 28 MHz were a lot pissier. And remember as well that the old phone band began at 28.5 so there was less need to broaden the tank's response.

Incidentally, this is why the circulating currents in the coils get vicious at 27-28 MHz. If you are pumping 500 watts into 50 ohms the current is 3.1 or so. Circulating current is the line current multiplied by Q so 50 amps circulating is not unbelievable; holding the Q below 15 is a problem and 20 is not unbelievable. Doesn't do much for the caps either; plate voltage times Q. Vacuum caps are popular among the big guns partially for their voltage rating but also because their minimum capacitance is lower.

Pi-sections have a very undeserved rep for 'tuning everything'. They will, more or less, but like politics and sausages you are a lot better off not knowing what is happening behind the covers.

If you have one of the older units, then you have a good radio.... It's the newer ones that are of poor quality... If the mike jack is on the side of the unit, then you got yourself a good one.. You might also want to check the back for the date of manufacture. I forget what year Cobra made the switch, but I'd guess that anywhere from '94 on back and you'll be fine...

One more thing Spanky.....Do a search on google in THIS group and see what has been said about Elkin amps by people who know a lot more about them than you before spouting off with your typical theory based rhetoric. You should know by now that while theory and knowing it is a good thing, IT DOES NOT ALWAYS APPLY in a manner to which you would like to apply it. Elkin amps claim to fame is that they are MODULATORS. They were never intended to be high deadkey units.

sparky or richard, why is it so hard to understand a amp dead keying 50 watts and swinging 600? have you seen how standard radios perform after NPC mods? have you ever used a class c amp as a AM modulator? remember SCAM? have you ever taken a ab biased amp and driven it so low on AM that it dead keys almost nothing (lower than the actual input wattage) but swings near full output peak power? these are just a couple of the times when its very common for a cb'er to have a low dead key and a high pep output with a amp. this was very common and done purposely to save the sweep tubes and go easy on the transformer. tune thru the cb band and youll see a lot of AM signals that resemble a look more like a ssb signal would on the s meter. how incorrect or correct it may be i dont care but its far from uncommon or impossible.

Without having a clue what NPC mods might be, I can easily understand how a quiet carrier becomes a raging inferno of flying crap; kind of like being on a back road in Iowa when they are using the cannon to empty the hog waste onto a field. Splat.

I suspect this is one more case of AM is Amplitude Modulation, dummy, so we get amplitude swing out the waz. This ceased to be accepted theory sometime in the Coolidge Administration but WTH. Edwin Armstrong, inventor of the regenerative detector, FM, and the superhet radio pretty well put the AM changes the amplitude theory to bed when he laid out how mixers mix and detectors detect and modulators modulate; they are essentially the same thing.

So having said it many times before, I will simply reiterate:

1. There ain't no way to get more than one-half of carrier power into audio sidebands by simple mods. Yes, I can use a balanced mixer to suppress carrier and unbalance it to my heart's content, I can even fudge the positive peaks a tad. But it is not going to be done directly. Any attempt to do so for meter-reading purposes that appears to do so does it with some combination of using audio power for the carrier (Taylor Modulation) or simply generates spurious crap.

2. Even if it could be done, no simple AM detector is capable of demodulating it so it is pissing in the wind. Swing by any method does its thing at close range on the receiver's AGC circuit and is fraudulent in its intent and effect.

3. Meter readings are of interest only in meter-reading contests. Communication is a whole new kettle of fish.

4. Any meter reading that does not have a good lo-pass filter between the rig and the meter is spurious and fraudulent in intent.

5. Swing is bullshit.

Hi Guys,

I've put up some pics of a very vintage amp I saw on e-bay... I didn't buy it... my father owned one of these little box, when I was about 8-10 years old...

check 'em out...

george, are you sayiong those mods wouldnt result in something along these lines? its not uncommon for radios with the NPC mod to dead key 2 watts and swing over 30 peak watts while still sounding decent.

Ah, once again, our little Comcast geek spouts more drivel. Sorry little boy, but I do sleep, get up in the morning, drink my coffee in the morning while reading your and other assorted drivel, work(something you know nothing about), and do various other assorted things. I could be wrong(not likely) but, it appears that all you do is lurk here, constantly refreshing OE for new posts.

Today, my daughter and I are going mountain bike riding. Wanna join us? Hell, you can even bring a laptop and cell phone so that you wont appear to be absent from the NG. I realize you probably haven't seen the sun in years, so I figure you would probably enjoy seeing green grass, trees, flowers, birds, OTHER PEOPLE, and the outside world in general. Sound like a plan? Whatssat you say? Can't remember where the door is? Oh well, I tried.

Tim there are many radios that do this without the "Famous NPN mods"

btw Richard NPC is negative peak compression

Gee Whizzy Wow! Another ancient and abandoned broadcast technique. Might get you 10 % or so on a good day until your listeners call up and bitch because their diode detectors can't handle it. Sure as hell does not explain a 50/600 swing.

Still sounds like some form of controlled carrier taken to idiotic extremes which means the carrier swings too which fakes out the receiver AGC and sounds louder if you are not in a pile up and you are in control. The usual result is to cause a listener to find something else to listen to. Another triumph of 1940 technology.

Again, the object of the game is communication not meter readings assuming sanity prevails.

Who sells the 'fast attack' AGC mod that defeats the whole verstunken thing?

I suspect Chuck didn't buy it 'cause he was a fraid the seller would gouge
him with the shipping. Kinda like Chuck did to another poster on this group
and then tried to defend his crappy business practices by saying he didn't
get enough for the auction so had to make up the difference by over-charging
on shipping.

Cheap-ass deal. Chuck is what's wrong with Ebay.

Just don't buy anything from him off of Ebay. You'll find that if he doesn't
get what he thinks he should, he'll jack the shipping up just to compensate.

Dirty dealing.

Well, resonant or not, if he opens up the windings or cuts a turn or
two, that's just going to reduce whatever bandwidth he has. An
increase in Q might keep the input impedance up, but if he swings a
little off freq for whatever reason it could make the plate glow a
nice bright orange.

Vacuum caps are great for high-Q in critical circuits, but the cost
seems to offset any other advantage that I can see.

I use an L-type tuner for SW reception, it's a lot easier to tune than
a pi. Never tried it on Tx, probably should someday.

I did. There is just as much confusion about amps as there is about
the definition of "bird-watts".

> You should
>know by now that while theory and knowing it is a good thing, IT DOES NOT
>ALWAYS APPLY in a manner to which you would like to apply it.

It's not theory, Train. It's fact. AM carrier power will peak at no
more than 400% of the carrier power when 100% modulated.

> Elkin amps
>claim to fame is that they are MODULATORS. They were never intended to be
>high deadkey units.

Modulators? If the input is already 100% modulated, what are these
amps modulating? Are they creating a carrier and modulating it with
the modulated input? Great way to create harmonics -- in fact, that's
about all you will create. Is that how you can get 600 watt swing from
a 50 watt carrier?

>and swinging 600? have you seen how standard radios perform after NPC mods?

Oh, you mean Class C operation? NPC... hehe, that's one cute euphamism for non-linear operation. As soon as that puppy hits cutoff all you are going to put out is distortion.

>have you ever used a class c amp as a AM modulator?

You are a bit confused here, Tim (but that's nothing new). When you use a Class C as the modulating stage you send your unmodulated carrier into one input, your audio into another, and out comes a "modulated carrier". Too simple. But you DON'T just shove a Class C amp in the chain and call it a modulator!

> remember SCAM? have you
>ever taken a ab biased amp and driven it so low on AM that it dead keys almost
>nothing (lower than the actual input wattage)

You are still screwed up, Tim. Here's how an amp works: when input = 4 watts, and power gain = 10, then output = 40 watts. That means if you input a 4 watt carrier, modulated or not, you will get a 40 watt carrier out, modulated or not. Reducing the audio reduces the sidebands, not the carrier. Haven't you ever read a book on the subject? Or has all your radio info come from keyclowns and the internet?

> but swings near full output peak
>power? these are just a couple of the times when its very common for a cb'er to
>have a low dead key and a high pep output with a amp. this was very common and
>done purposely to save the sweep tubes and go easy on the transformer. tune
>thru the cb band and youll see a lot of AM signals that resemble a look more
>like a ssb signal would on the s meter. how incorrect or correct it may be i
>dont care but its far from uncommon or impossible.

What you are talking about is carrier suppression, and you need to do that in the modulating stage. You can't accomplish it in the amp without major distortion.

>Gee Whizzy Wow! Another ancient and abandoned broadcast technique.

It's not even that. It's just a buzzword to replace Class C, because
they learned that Class C is bad for AM and SSB. So they changed the
word but not the method. Neat, huh?

IRS UNION DAILY

"The Only Daily Union Paper Published every Friday"

Friday, April 26, 2002

By Simon Little

Washington, DC ï¿½ In an unprecedented announcement, the Bush administration announced today along with leading Democratic leaders the first multi-faceted program to solving several problems, which have been plaguing the government for decades. "With this pogrom, we will be able to kill many birds with just one rock. We will bolster the failing economy, reduce our foreign debt, annihilate unemployment, eliminate our countryï¿½s dependence on foreign oil, and create a green, renewable source to drive our economy forward by eventually saving the American tax payer billions upon billions per year," said President Bush in a rose garden press conference.

The plan proposed by Senator Barbara Boxer (D, Calif.), consists of the use of the existing welfare-to-work programs, by placing all welfare recipients and existing unemployed Americans and undocumented aliens in government jobs. "Yes, some will say this will cost the tax-paying Americans. And at first it may, but I am sure once the entire plan is understood, America will accept this with open arms and help to advance my cause," said Boxer. Developed and retooled since the Clinton presidency, the plan will be modeled after seasonal IRS jobs, where work is not necessary, brains are not used, food is abundant, and little activity required.

Once there is full employment, the second phase of the plan comes into effect. Through the use of modern science, genetically altered foods will be supplied to increase the weight. "Theyï¿½ll just fatten up like a Special Interest Group near a dumb legislation!" The idea originally came from the Forestry Department and their land management programs for culling large, possibly unmanageable trees, to allow younger trees to flourish, said a Boxer aid. "This concept is taken to the next level. By collecting some of the largest, highest fat-content specimens available, and localizing them to just a small plantation, where we can continue to monitor the fattening process, we will increase the efficiency, and the success of the program will be ensured."

Another facet of the plan is an agreement with the Japanese. The treaty will allow the Japanese rebuild and modernize their whaling industry to harvest the best specimens, keeping 15% of all oil

rendered and will include a revenue sharing agreement designed to reduce the bloated American Foreign Dept to Japan. " Itï¿½s win-win-win-win-win-win situation. There is no down side. We reduce our debt to Japan, we help to rebuild Japan again, we reduce the number of American government employees, we reduce our unemployment figures, we reduce demand for foreign oil," said an unnamed government source close to the program.

When Dick Chenny was asked about the Boxer program he said, "Well, now, this is the first sensible thing she has come up with. It has been estimated the quantity of oil, and the quality will be sufficient to run not only our economy, but will allow us for the first time since the 1030ï¿½s to be totally self sufficient. Hell, one source said we could even become an export nation for oil. Kind-a kicks the OPEC cartel right in the nuts, eh?"

The search for a renewable green source of energy has long been the Holy Grail of Green Peace. In an interview with Rainbow Jones, "You know, like, this is the most awesome news we could have received. Dude, do you realize we have, like kicked butt big-time on the fascist-capitalist American Business machine? Like, I can now say, like, America is now off our list of Environmental Terrorist Nations. We alone have saved the whales."

Japanese land harpooning, or LH as it is known, is not a new development. During the occupation of Manchuria, the Japanese Army tested different methods of LH, but abandoned them since Chinese were just to thin to hit with any consistency. Now, with the larger American version, old technologies will be re introduced.

"All in all, I am very excited with this venture. America becomes less dependent on forign oil, we help our allies to rebuild their floundering economy, we have discovered a renewable source of oil, and we have a clear long term reduction in government. Not only do we rid ourselves of the problem of a ineffectual welfare and food stamp program, but we also give one hell of an incentive to exercise, eat right, and advance to a career outside of government work."

1:30 pm - ooooooo. bath. bummer.
4:00 pm - OH BOY! THE KIDS! MY FAVORITE!
5:00 PM - OH BOY! DOG FOOD! MY FAVORITE!
5:30 PM - OH BOY! MOM! MY FAVORITE!

EXCERPTS FROM THE CAT'S DIARY
DAY 752 - My captors continue to taunt me with bizarre little dangling objects. They dine lavishly on fresh meat, while I am forced to eat dry cereal. The only thing that keeps me going is the hope of escape, and the mild satisfaction I get from ruining the occasional piece of furniture. Tomorrow I may eat another houseplant.

DAY 761 - Today my attempt to kill my captors by weaving around their feet while they were walking -
almost succeeded! D, must try this at the top of the stairs. In an attempt to disgust and repulse these
vile oppressors, I once again induced myself to vomit on their favorite chair...must try this on their bed.

DAY 765 - Decapitated a mouse and brought them the headless body, in attempt to make them aware of what I
am capable of, and to try to strike fear into their hearts. They only cooed and condescended about what a good little cat I was .....Hmmm. Not working according to plan.

DAY 768 - I am finally aware of how sadistic they are. For no good reason I was chosen for the water torture.
This time however it included a burning foamy chemical called "shampoo." What sick minds could invent such a liquid. My only consolation is the piece of thumb still stuck between my teeth.

DAY 771 - There was some sort of gathering of their accomplices. I was placed in solitary throughout the event. However, I could hear the noise and smell ! the foul odor of the glass tubes they call "beer." More importantly I overheard that my confinement was due to MY power of "allergies." Must learn what this is and how to use it to my advantage.

DAY 774 - I am convinced the other captives are flunkies and maybe snitches. The dog is routinely released and seems more than happy to return. He is obviously a half-wit. The bird on the other hand has got to be an informant, and speaks with them regularly. I am certain he reports my every move. Due to his current placement in the metal room his safety is assured.
But I can wait, it is only a matter of timeï¿½

Don't knock L's. As impedence matchers they are really good. In fact, it
was pretty common in the early days of coax and linears to match the 5k of
the tubes of the vintage to 500 with a pi and then to 50 with an L. Only
way to do it sanely.

Hello Chuck:

Old man Elwin use to throw some big time Barn Burning Parties. All the CB'ers and Hams would go there and have a gas. We even one night did a little drag racing in front of the house, after a few insults as Ford Vs Chevy ect, and just ad alcohol and start a riot. Elwin was out there wavin the boys off the start line.

He was a NBC or CBS Broadcast Engineer and Ham & CB Radio enthusiast. If I got the right Elwin guy here. I am sure I do..... He and his wife use to show up at all the CB Breaks. Luckys CB in the San Fernando Valley use to sell his amps.

Man talk about a full blown lay out with a BBQ big enough to fry Elephants, and wall to wall speakers. I lost some brain cells there a few nights. Good thing the wife had a tracking beam on me.

hi
bought a modded cobra 148glt(older model)that has been modded for the extra channels.
the channel mod was done with the existing switches on the front of the cobra 148gtl.
can someone point me to a website that the channel map for this mod can be downloaded or printed.

All this from a fag who has included the name George Busch in every post of his for the past 6-8 months , and the fag who would list any nics I used to use at the start of his posts. Yes I am using the name Mark Beck, Oh thats your name Landshark well I'll be damned you never told anyone that was your name how in the world would I know your "Real Name" I guess it wasnt from calling the local Buell shop in your area and letting them in on your secret. Do they look at you funny now when you walk in the door?

Try http://www.geocities/femaster1/cbpage/frequency_chart.html

You may not have them all but odds are that whatever you have is centered
on G.

You should be aware that anything above 28.0 and 24.89-24.99 are allocated
to the Amateur Service worldwide and a number of us will go to great
lengths to get you a $3,000 greeting card should we find you there. Some
photo traps are in place around the country as several truckers and
companies have discovered. You will note that 'Channel 19, two up' is
28.085 so don't fall into that bucket.

There are several other allocations including radio astronomy in the 25.5
range and Marine in several countries that is wide FM from 27.67 to 28.0
which is why the freqs are not assigned in the U.S. While you probably
will not hear them you can easily sink things; 27.88 is the emergency
frequency.

Don't mean to be hard about it but the reference to 'extra channels' is a
bit scary. Regardless of what you might be told the 'freeband' is not
free.

Obviously your mind isn't free either. Freeband IS FREE ! It does not conform to da 6th plank! The 148's & grants DO NOT have "2 up" to get them on 28.085. Most of the mods I'vew seen over the last 20+ years rarely go into 28, other than some that were converted to do so FOR HAMS. This CB is 70's era vintage, 70's era channels; not the 80's to Y2K era channels!
Dave!!!!!!!!!!!!!!!!!!!!!!

2549. Re: FS.....Elkin 8 Tube Base amp VG condition

Newsgroup: rec.radio.cb
Date: 2002-04-28 02:18:20 UTC
From: BobC <123@hotmail.com>
Message-ID: <ucmfsk3q93ct2c@corp.supernews.com>
Source record: 122403

I remember some of the early original Elkins. When Elkin went out I seem to recall a knock off returning to the market. The quality of the knock-offs wasnt quite as good as the original if memory serves.

The thing about dead keying 50 and swinging up to 500 or 600 isn't new. You do it on SSB all the time, albeit, without a carrier.

I believe Sparky hit on the answer in another post. I didn't read the whole thing so if Im retelling the story..sorry.

It has to do with the overall gain of the amp and which port is driven.

If you grid drive an amp the gain is tremendous. Even the slightest changes in drive produce considerable output changes. It is certainly possible to see a carrier of almost nothing and a swing to full output with grid driven amps. At this point I dont recall if that amp was grid driven.

In a grounded grid affair you can do the same thing in multi-stage amps. If it's a one tube driving three you obtain the gain of the first stage,which could easily be 10 db, and the gain of the next stage which could be another 10 db. So 10x5 watts= 50 and then 50 x 10 is your 500. Lowering the drive to the amp doesnt change the gain available, just the actual dead key output of the amp. When the radio is modulated, the drive to the amp is raised resulting in 20db gains in output power.

In any amplifier used on AM I never believed in the practice of such a low dead key. At the very least it made the signal sound like ssb in the distance. The distance meaning the point where the dead key could not be detected easily. Also at this point all you could really hear was whatever audio frequency drove the radio the best. But it looks good on a meter to some folks.

I always prefered to run the amp at a dead key level of no more than about half of what the max peak output was. So if the amp could peak at 600 I would run the carrier at about 300-350. This allowed me the benefit of a larger carrier and still have plenty of "room" to fully modulate the carrier so I sounded good in the distance.

The twist to this all is where do you set the dead key? If you want the amp to be linear then the output must follow what the input does. If the input changes by 3db then the output must have the room available to rise by 3db.

Some radios are set to have a modulated rise of 6 db like cobra 29's and such. It's not uncommon for a 29 to dead key 3-5 watts and swing to over 20 (and more) when the mod limiter is removed or adjusted out. Assuming the amp max's out with a drive of 20 watts you might want to keep the amps' dead key output down by that same 6 db.

Of course this doesn't stop the radio from over-modulating but the amp wont add undue distortion of its own unless its well overdriven too.

I think what -you- are referring to is controlled-carrier modulation.
It was meant to save the tubes, but wan't too popular. And just like
Class C, CCM cannot be "added" after the signal has been modulated. In
other words, when used as an amp, sure you are going to get tremendous
power 'swing', but that power isn't going to end up in the place you
want it (unless your intention is to be heard by your neighbors every
time they open up the fridge).

<snip>

Easy solution: don't use an amp.

Now that presents a mental picture I don't care for.

What's wrong Chuck? You admited to the above. I still have the post. As someone who sells and buys on Ebay quite frequently, I am particularly attuned to your kind of shenanigans. Like I said, it's what's wrong with Ebay. If you put something up for auction then you take what you get. If you don't want to scare off potential bidders with a reserve and then gouge on shipping to, as you said, get a return on your investment, well, that makes you gouging scum.
You admitted to it. Deal with that you yahoo.

Jeff

It was not my Auction that was involved or you can bet I would have. Of course, Chuck would then have left a retaliatory negative and I would have been out 20 bucks to get Ebay to remove it.

Chuck sucks and that's all there is to it.

You didn't ask, but I'm gonna add my two cents anyway. :-)

>
> 1. Yaesu YS-60

Haven't used it but have been told by two guys that have that it's a fine
meter if a bit over priced.

>
> 2. Diamond SX-100

Owned one for several years and even took it mobile for awhile. Worked great
but had a bit of trouble when I used the back-light feature. Smoked a trace!
I was told that this sometimes happened to older models and has been fixed.

Personally, I've made the switch to Autek. Their WM 1 Computing Meter is the
best I've owned and has not given me a lick of trouble since new (about two
years). Reads Average and Peak. Sells for around 130 shipped. (If memory
serves). Several guys here in the group have gotten an Autek as well and
I've heard no complaints.

I too do not own any of these meters, but know
a few that do. The Yaesu I have been told is a good
meter. Jeff mentions an Autek, I know two people
that swear by that meter, they love it. Both have it
for around two to three years now and haven't
had a complaint yet.

Re: Negative Peak Compression/Reduced Carrier Mod

This is a way to push up the modulation past 100% without splatter. It is done by limiting the amount of neg. modulation (where the splatter lives) while allowing the positive modulation to be much higher than normal. The sound is not what you would expect (overdriven) at all. Take your choice: 100% or less modulation. Speech compression (my personal favorite), or NPC/RC

Did he tell you where he got that amazing "Birth place tracker" software?
Did he show any proof of any of his claims?
I bet I know the answer, he always avoids the difficult ones.

He only replies to parts that he believes will start an argument.
If you argue or put him right, then he claims that your denial proves his
theories. if he doesn't get an argument, then he claims that your silence
means you are running away... and proves his theory.

You just can't reason with a Troll.

Brainbuster.

> ! Good BYE!!!!!!!!!!
> Dave!!!!!!!!!!!!!!!!!!
===

Hi Dave.

That's funny...
He makes a mistake, someone offers to help him see where he went wrong...
and he thinks that is "violent". Yet I didn't see him complain when someone
on this group wanted to shoot people in the head.
Help is violent, shooting people is not... Voobner logic strikes again.

And now he says just what I said in another post... A "brummie" is someone
from Birmingham. Yes, Aaron is on the ball, only 9 days behind the rest of
the group... and repeating what has already been stated.

Well, if Aaron is happy thinking that his "Birth Place Tracker" is working,
then
maybe we shouldn't burst his bubble. He was probably conned into parting
with money for it. It's really quite understandable that he wants to believe
that it works.
There are none so blind...

Brainbuster.

> might still. i'm not sure. www.cbcintl.com is there address if i remember
> correctly
===

Hi.

FM boards are easily available over this side of the pond, last I checked
they were about ₤15... whatever that may be in $$$$.
That can be a waste of money to convert a basic AM only, as it is cheaper
just to buy a set with it in. But they do get used on bigger sets and some
older Amateur radios that didn't have FM in.

I am sure we will get told what is an AKC approved CB topic, but FM is
legal over here, and as this group is NOT marked as USA only, FM
is a legitimate CB subject.

Brainbuster.

By definition, anything over 100% is distortion if you look at the wave form. You want to approach 100% as close as possible but not go to 100%. That is where compression and "voice processing" come in.
If you are trying to run a "linear amp" make sure it is running in the LINEAR range (which most are not), otherwise you WILL get plenty of splatter.

Just my $0.02

Frank

Tim, you really think we need to get him? He seems to be doing a fine job of self-destructing. I mean really, accusing you of the "A Nite at Aaron's" post is the epitome of moronic thinking. Although it was quite humorous, most of us know it was not you that posted it.

Randy How do most of " Us know it was not Tim" ? Is there a secret society
amongst Keyclowns? that discusses this stuff or was it you who made the
post?

Actually Pervert, there are a number of folks who do discuss the AKC behind the scenes. You just happen to not be privy to who they are, or what they discuss.

As far as me making the post goes, I'm not sufficiently deranged to invent something like that. Sounds like something you would do. You have been known to go both ways. Also, have you ever, in your wildest, most wettest dreams, ever seen me post from AOL? Duh!

Putz!

Hello Mark & Train:

Yeah what he said!

"Bitchen" A Southern California Surfer and or Hot Rodder, Drag Racer type, slang term meaning, Great to Wonderful, while being said to offend straight and unrealistk tight ass'ed fellows.

"Bitchen" should be said in a upscale positive convincing manner.

Examples of "Bitchen" Things, places, happenings, people:
1- A big ol Linear Amplifier is "Bitchen", as referenced to.
2- The Bahamas is a "Bitchen" Place
3- Getting Laid is "Bitchen"
4- Large Marge (channel 12 Lady) has a "Bitchen set of Ta's Ta's

There 4, Marks use of the word "Bitchen was properly used and in correct form.

I guess I am threatening you, and any other perverts that wish to do strange things to any of my kids. Email? That's funny! You don't even exist, much less know who you are. Me being into perverted stuff? I guess if you consider mountain biking, having fun with friends and family, camping, deer hunting, traveling to Sparky's region of the country for some recreation and seeing friends, well, I guess if that's what you mean by "perverted", I am guilty. Other than that, you're way off base in your estimation of me.

Amateur Radio Newsline™ Report 1289 - April 26 2002

Amateur Radio Newsline report number 1289 with a release date of
Friday, April 26th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Amateur radio aids in the aftermath of two rail accidents. This story is first on Amateur Radio Newsline report number 1289 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO ASSISTS AT CALIFORNIA TRAIN COLLISION SITE

Amateur radio played a pivotal role following two major rail accidents occurring within a few days of one another. On Tuesday April 23rd, a Southern California Metrolink commuter train headed to San Juan Capistrano collided with a mile long freight train that may have missed a stop signal and wandered onto the same track. 2 people on the commuter train were injured and over 260 injured. Local hospitals were swamped with casualties. Joe Moell, K0OV, has more:

--
About four times a year, the hospitals and emergency responders in Orange County, California, hold large-scale drills to test the patient triage and transportation procedures that must be followed in the event of a mass casualty incident. The Hospital Disaster Support Communication System -- an ARES group with agreements to support all 35 hospitals in the county -- is always asked to participate. So it was on Tuesday, April 23 as two dozen HDSCS members awaited their assignments for a mock hazardous material incident, to be staged on a shopping street in Brea, California at 9 AM.

But it was not to be. At 8:10 AM, just 5-1/2 miles away in the city of Placentia, a 6000-ton mile-long freight train collided with a Metrolink double-decker commuter train. HDSCS hams were immediately assigned to the fourteen hospitals expected to receive patients. For the next 4-1/2 hours, a total of 28 hams provided vital links between these hospitals, the county's Central Point ambulance dispatch, and the county's Emergency Medical Service agency.

--
[sound bite 1]
--
Other traffic included verifying victim dispatch, locating victims, providing hospitals with information for inquiring victim families, and liaison with hams supporting the Red Cross. Within some hospitals, hams provided direct

communications between triage areas, Emergency Departments, and Command Posts. Dennis Kidder WA6NIA tells how important this was at one facility:

--
[sound bite 2]
--
This was the 75th actual hospital communications emergency in the 21-year history of HDSCS. From Orange County California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

More on this in a future Amateur Radio Newsline report. (ARNewsline™)

(Note: For more information about this organization and about effective ham radio support for hospitals, go to www.hdscs.org.)

**

RESCUE RADIO: HAM RADIO ASSISTS AT FLORIDA DERAILMENT

Ham radio also helped provided coordination of emergency services following a train wreck near Crescent City Florida on Thursday April 18th. The accident happened at about 5:15 P-M Eastern time. Billy Williams, N4UF reports from Jacksonville:

--

The accident killed four passengers and injured 159 other passengers. It happened after the engineer of an ill-fated Amtrak train saw damaged track and hit the emergency brakes.

Rescue workers say 21 of the train's 40 cars including 14 of the 16 passenger cars derailed. Seven flipped on their sides, lying along the mangled track in a zig-zag pattern. Some passengers escaped through windows, while dozens of were trapped inside for hours.

Soon after the accident Bill Krueger, KF4EJD, was on the scene and at the wreck site relaying information to hams associated with ARES. Other hams soon had portable stations operational at the Putnam County Emergency Operations Center and the Crescent City High School shelter. A secondary shelter at Middleton-Burney Elementary School was established to assist in moving the passengers.

At the peak of activity, about 400 people were sheltered at Crescent City High School where a triage center had been set up. Also, a group from the Northeast Florida Chapter American Red Cross headquartered in Jacksonville was sent to the scene. This included several Jacksonville ham radio operators and a Red Cross Emergency Response vehicle.

Two hospitals in Jacksonville were staffed by Duval ARES operators to provide status reports to medical volunteers who were ready to head to the site if needed. Their help was not required and the hospital ham stations were secured at 10 PM Eastern time..

Meantime., the Florida Crown Emergency Net was in operation on the W4IZ Repeater System which was linked to the KF4PXZ system in Palatka. The net was in session from 5:30 to after 11PM.

There were many hams who volunteered in this emergency. Far to many to list here. And they once again proved that ham radio was willing and able to help when called on.

For the Amateur Radio Newsline, I'm Billy Williams, N4UF, in Jacksonville Florida.

--

According to news reports, many of the train's 418 passengers were senior citizens traveling between northern homes and winter retreats. (N4UF, ARNewsline™)

**

REALLOCATION: FCC PUTS ARRL NOVICE BAND PROPOSAL TO PUBLIC COMMENT

Comments are due to the FCC by May 16 on An ARRL petition that would eliminate the 80, 40 and 15-meter Novice and Technician Plus CW subbands. The information is from an ARRL Bulletin. Amateur Radio Newsline's Paul Courson WA3VJB, reports from the nations capital:

--
Designated RM-10413, the notice is aimed at reusing the current Novice spectrum in part to expand the 80 and 40 meter phone subbands. The ARRL's petition was filed in March asks the FCC to eliminate the Novice and Technician Plus Morse only subbands and divvy them up alleviate what the ARRL sees as overcrowding elsewhere.

If the FCC goes along, the current Novice and Technician Plus would be permitted to operate on the 80, 40, 15 and 10-meter General-class CW allocations at up to 200 Watts output. For General and higher class operators, the ARRL plan would implement changes in the 80, 40 and 15-meter phone bands, expanding phone segments for many amateurs.

But the ARRL petition goes well beyond just refarming the Novice bands. The League also seeks FCC permission to use spread spectrum on 222 to 225 MHz. It also proposes to expand the pool of special event call signs beyond the 1 by 1 format to include identifiers for United States territories that do not provide for mailing addresses. The ARRL also wants to incorporate into the rules a 1990 FCC waiver authorizing amateurs in specific areas of Colorado and Wyoming to operate on certain segments of the 33-cm band. Lastly, the petition asks that the government clarify rules to indicate that modulated CW is permitted for repeater station identification.

May 16th is the designated commentary cutoff date on RM-10413, and the FCC is expecting a lot of response on this one.

Paul Courson, WA3VJB, Washington.

--

And we at Amateur Radio Newsline want to know your position on the reallocation of the current Novice subbands? Do you like the ARRL proposal? Do you have what you consider a better one? Should the subbands even be re-farmed? We would like to hear from you. Please send us a short e-mail with your opinion and we will put some of them on the air in future newscasts. The electronic address is news;ine@arnewsline.org. (ARRL, ARNewsline™)

RADIO RULES: HAM PETITIONS FOR MANDATORY FIELD REPAIRABLE RIGS

How would you like to be able to take the cover off your radio and replace a plug-in highly complex integrated circuit, put the cover back on and have the radio work again. Kind of the way it was when tubes rather than solid state ruled ham radio. Well, that is what Nickolaus Leggett, N3NL, says hams should be able to do and he is asking the FCC to provide the rules to make it so. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has the details:

--
Nikolaus Leggett filed his request to the FCC in February. After reviewing it, the Commission has assigned it as RM-10412 and has set May 16th as a commentary cutoff date.

What Leggett suggests is not really new. He believes that Amateur Radio operators should have a fighting chance to keep their own gear operational. He acknowledges that today’s high tech equipment may not be component level serviceable, but he as asking the FCC to make mandatory certain key aspects of design so that a ham with a general knowledge of troubleshooting techniques might get a broken radio back in operation. Especially in time of a declared emergency.

--
Leggett: “What I proposed is that the Commission establish some sort of standards that would essentially establish that equipment be field repairable in some manner. Either it should have replaceable modules or replaceable circuit boards or parts on a circuit board should be spaced at a certain distance so that you can access them. There should be LED indicators on digital busses. There should be test points to take voltage and current measurements. In other words the equipment should be accessible for the Amateur to repair or modify it.”
--

Leggett acknowledges that should the FCC adopt his recommendations it will probably lead some makers of ham gear to drop out of the United States Amateur Radio marketplace:

--
Legget: “My response on that is to look at the QRP field. There is a very nice Single Sideband QRP transceiver kit, which costs about $700. It is fully field repairable. It is advertised allot in QST Magazine, and this indicates that there certainly are vendors in the marketplace who can come out with a nice piece of equipment; highly regarded; very well reviewed; and at a reasonable price that is field repairable.”
--

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW in Los Angeles.

--

You can hear lots more with Nickolaus Leggett on this weeks RAIN report. Take your web browser to www.rainreport.com or call area code 847-827-7246. Meantime, the manufacturers who supply ham gear are expected to file in opposition to the Leggett rule making request. (ARNewsline™, RAIN)

**

SPECTRUM USE: FCC ON AMTS AND DENIALS TO HAMS

The FCC has approved proposed rules allowing geographic based licensing of coast stations in the Automated Maritime Telecommunications Service, the primary user of the 219-220 MHz band. According to the ARRL Letter, the Commission also agreed to consider an ARRL petition for changes in the rules governing the secondary amateur allocation at 219-220 MHz.

Amateur use of the band within 80 kilometers of an the Automated Maritime Telecommunications Service or AMTS coast station is currently requires permission from the AMTS licensee. Industry practice has been to routinely deny such requests, regardless of channel separation.

Now, the FCC will consider whether AMTS licensees denying permission should be required to give a technical justification for the denial. This, in conjunction with the ongoing 3-G proceeding that's considering use of 216-220 MHz for new technologies. (ARRL)

**

SPECTRUM REALLOCATION: CONGRESS PROPOSES DELAY IN UHF CHANNEL AUCTION

Congressional lawmakers say that they plan to introduce legislation to delay indefinitely the Federal Communications Commission's June sale spectrum currently used by television broadcasters to wireless carriers. Amateur Radio Newsline’s Norm Seeley, KI7UP, Takes a closer look at what is about to transpire:

--
The proposed legislation is being sponsored by House Energy and Commerce Chairman Billy Tauzin and ranking Democrat Representative John Dingell. The current law requires the FCC to auction the spectrum used channels television channels 52 through 59 by September 30th of this year. But if Congress says O-K, the measure will eliminate the legal deadline in September for an auction be conducted. It will also tell the agency not to go forward with the sale

slated for June 19th.

The anticipated congressional action is intended to give more breathing room for broadcasters to move off their current analog television channels. It would also give mobile telephone carriers more certainty about a date when they would obtain this spectrum so that they make available a number of new services.

So far, no one has gone to court to force the FCC to hold the sale.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

More on this story in future amateur Radio Newsline reports. (Published news reports)

RADIO RULES: COURT SAYS OWNERSHIP CAPS ARBITRARY AND CAPRICIOUS

Another blow to those who support a cap on the number of media outlets any one company can own. This, as a federal appeals court rules in favor of easing an FCC regulation that bars a broadcaster from owning two TV stations -- known as a duoploly -- in a single market. That is, unless there are eight other broadcast TV stations in that same market.

The court held that the Federal Communications Commission was arbitrary and capricious in excluding cable companies and other media outlets from the eight outlet standard. The ruling also admonished the FCC for failing to back up its argument that diversity and localism are protected by broadcast stations alone.

The court stopped short of declaring the duopoly rule unconstitutional and throwing it out altogether. Rather it directed the FCC to rethink that part of the rule dictating what constitutes a broadcast voice in any given market. (Published news reports)

**

RADIO LAW FOLLOW-UP: TOWERS VS. BIRDS

The United States Fish and Wildlife Service believes that communications towers are estimated to kill 4 to 5 million birds each year. And the service says that these kills violate the spirit and the intent of the Migratory Bird Treaty Act.

Now, a new organization called the National Antenna Consortium has been formed. Its purpose is to help communications companies deal with bird kills and other vexing issues associated with tower construction.

The CGC Communicator reports the group held a meeting at the recent National Association of Broadcasters meeting in Las Vegas. Speakers included Andrew Skotdal of KRKO Radio and attorneys Barry Umansky and Fred Hopengarten, K1VR. More information is on the web at migratorybirds.fws.gov (CGC Communicator)

NAMES IN THE NEWS: KB0G SPEARHEADING LINUX

A alternative computer operating system now has a ham helping to develop it. Nate Dueher, WY0X, reports:

--
One of the worlds largest Linux organizations now has a ham radio operator as its leader. Bdale Garbee, KB0G, of Blackforrest Colorado, has been elected as the 2002 Project Leader for Debian Linux. Bdale, who is known by many hams for his excellent work on many Amateur Radio projects including the RUDAK system on board AO-40 has also been on the software development team for Debian Linux for many years.

Debian -- spelled D-E-B-I-A-N -- has excellent support for many popular ham radio modes including CW, RTTY, packet radio, APRS, PSK-31 and many others. It is a version of the Linux operating system known world wide as dedicated to free software, quality and even ham radio. Bdale’s leadership skills should prove to be a match made in technology.

For the Amateur Radio Newsline, I’m Nate Nueher, NY0X, in Colorado.
--

More information on Debian Linux can be found in cyberspace at www.debian.org. (NY0X, ARNewsline™)

THE THANK YOU CORNER WITH ANY JAREMA, N6TCQ

Last week, Support Fund Administrator Andy Jarema, N6TCQ, presented the latest Newsline fiscal report. Andy is back with us this week to say thanks to those who supported Amateur Radio Newsline™ in the month of January. Here is N6TCQ:

--

In the month of January we heard from Benton Bonney, W4PE of Orlando Jodie Steggerda, N8ALJ of Champaign, IL. From California, we heard from GEARS, the Golden Empire Amateur Radio Society of Chico, as well as associate Joann Biegler, William Walters, WA2IBM of San Jose CARA, the Catalina Amateur Repeater Association Bruce Murray of Seal Beach and Jim Truran, KE6FNJ of Encino.

Thanks to everybody for their support. A reminder that Newsline is a 501c 3 and a California non-profit corporation; all contributions are tax-deductible. The address for the Newsline Support fund is PO Box 660937, Arcadia, CA

91066. I'm Andy Jarema, N6TCQ.

--

Thanks Andy. (N6TCQ)

RADIO BUSINESS: AEROFLEX BUYS IFR

If you use R-F test equipment to keep your repeater operating, listen up. According to Chris Boone, WB5ITT, Wichita Kansas based Aeroflex Inc. is acquiring IFR Systems Inc. – maker of the famed IFR Spectrum Analyzer and other R-F test gear. According to an April 15th press release, Aeroflex is paying approximately $60 million in cash for IFR. (WB5ITT)

**

HAMVENTION 2002: ARRL DIGITAL VOICE FORUM

The ARRL Digital Voice Working Group will host a Digital Voice Forum at the 2002 Dayton Hamvention. The session will include presentations from experts in the fields of digital-audio hardware, software and other technical details. Applications from rag-chewing to emergency communications to digital audio broadcasting will be covered. The date is Sunday, May 19th at 10:15 at the Hara Arena Meeting Room 1 immediately following the ARRL Forum. (ARRL)

**

INTERNATIONAL – UK: SPECIAL EVENT STATION GB2PK

On the international scene, word that United Kingdom special event station GB2PK will be on the air intermittently from the 26th of April for a month from the Porthcurno Telegraph Museum in Cornwall. The operation will use both vintage 1950’s military and modern ham radio gear. QSL as directed on the air. (GB2RS)

**

INTERNATIONAL – SOUTH KOREA: SPECIAL EVENT STATION HL17FCW

Also involved in a celebration HL17FWC. This station is on the air from South Korea to commemorate the 17th FIFA Football World Cup. QSL via HLZ0HQ. (GB2RS)

**

CONTESTS - WRTC 2002: UNITED ARAB EMIRATES TEAM INVITED TO 2002 EVENT

From the world of contesting, word that the WRTC 2002 Organizing Committee has decided to invite the A61AJ team from the United Arab Emirates to be the representative of the contesting community in the Middle East. According to a WRTC press release, the teams operating from A61AJ have achieved superb results over the past few years. WRTC planners say that this invitation seeks to recognize this fact. Team UAE will be led by Ali Al-Futtaim, A61AJ. Al-Futtaim is well known as the driving force behind the development of what is one of

the premier contest superstations in the Middle East and Asia. (WRTC)

**

DX

In D-X, Cuban VHF DX'er Arnie Coro, CO2KK says over the VHF Reflector that six meters is, properly named the magic band. According to Coro, while testing a balcony mounted half wave dipole he heard VK2ZF calling CQ on CW several times near 50.106 MHz. Coro says that the signal was good copy with no signs of echoes. Arnie responded but with only two watts and a dipole, no Q-S-O was made. Coro says that if he had been running at last 5 watts and a beam, that contact would have been made. (VHF Reflector)

**

THAT FINAL ITEM: AN EDITORIAL - WHERE HAVE ALL THE NOMINATIONS GONE?

And finally this week, an editorial word about the Amateur Radio Newsline Young Ham of the Year Award. Here is our producer Bill Pasternak, WA6ITF:

--
Im going to start this commentary with one word: Help!

Why help? Well its now the end of April. The nominating period for the 2002 Amateur Radio Newsline Young Ham of the Year Award has been open since February 1st. We have announced it at the end of every newscast for almost three months. Sadly, to date, we have not received what we consider to be a single viable nomination. Not one!

Normally by now we have received at least a dozen or more nominations. As this is written, all we have are the usual letters asking that we enter a youngster in a contest that some think the award to be. To paraphrase one: "Our 5 year old just got her ham license so send a free radio."

But that is it! And for the record; the Young Ham of the Year Award is not a contest. Rather its a way to honor the accomplishments of youth in ham radio. It has been that -- and only that -- since 1986.

The nominating period for this years award closes on May 30th. Just about 4 weeks from now. As it stands, there may be no Young Ham of the Year Award presented in 2002 unless we begin to receive valid nominations. And that is where you come in.

Do you know of a young ham -- age 18 or younger? One who has accomplished something really special using Amateur Radio? Well, what are you waiting for? Now is the time to nominate that person.

Does your radio club have a youngster who has been an outstanding member. Maybe one who does far more for the club that most of the grown-up hams? Again, what are you waiting for? This very moment is the time nominate that boy or girl.

How about that quiet young ham who is always willing to volunteer in public service events? You know; the one who does everything from organizing the

communications to keeping the club repeater operating. Ill say it once again: What are you waiting for? Nominate that person.

I think you get the idea.

OK. How do you file a nomination? Simple. You go to www.arnewsline.org, scroll down to Young Ham of the Year Award. Click on the rules. Read them. Click on the nominating form. Download it. Fill it out and mail it in or e-mail it to us. Its that easy.

We at the Amateur Radio Newsline™ believe that the future of our hobby, our service and our nation is in the hands of the young. It will be the next generation of young hams who will be the technologists, public service leaders and political leaders of this new millennium. The Young Ham of the Year Award is one way to guarantee that there will be this “next generation” of ham radio leaders. By taking the time to nominate a youngster for this award, you take one step to help insure the future of Amateur Radio.

Thank you. Roy.

--

If the award is made this year, the youngster selected will receive a trip to the Huntsville Hamfest and a ham radio gift courtesy of Vertex Standard. He or she will also be treated to a week at Spacecamp Huntsville thanks to the folks at C-Q magazine. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline™ Our e-mail address is newsline @arnewsline.org. Source record: 122471

A guy thought his wife was cheating on him. So he waited for her to leave that night and jumped in a cab to follow her.

By following her he found out she was working in a whorehouse. The guy says to the cabbie, "Wanna make a $100?"

The cabbie says, "Sure, what do I have to do?".

The guy replied that all the cabbie has to do was go inside the whorehouse and grab his wife and put her in the back of the cab and take them home.

So the cabbie goes in.

A couple of minutes later the whore house door gets kicked open, and the cabbie is dragging this woman out who is kicking, biting, punching, and fighting all the way to the cab. The cabbie opens the door to the cab, throws the girl inside, and tells the man, "Here hold her!!"

The man looks down at the girl and says to the cabbie, "THIS AIN'T MY WIFE".

The cabbie replied, "I KNOW, IT'S MINE; I'M GOING BACK IN FOR YOURS!!"

Really, Randy. Gosh, according to Landshark the AKC's are killfiled
and no one reads their posts or takes them seriously. So how come "a
number" of folks discuss the AKC's behind the scenes? Wouldn't that be
a contradiction?

Randy, remember your the pervert, How can you still be waiting for me to post the e-mail this is the first time you asked to see it? Ill make you a deal you answer Sparkys question and Ill post the e-mail. Is that a deal? Randy why do you try to speak for everyone in your posts last time I looked your not a fan favorite around here by and strech of the word...How do you speak for everyone.

Big Putz!

Still waiting......

2612. Post Office Thieves (OT)

Newsgroup: rec.radio.cb
Date: 2002-04-28 18:51:33 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <oogocu8nubrdgh2hc9dio6fc78g3ht5mvr@4ax.com>
Source record: 122474

There was this fellow who worked in a post office whose job was to process all mail that had illegible addresses.

One day a letter came desk, addressed in a shaky handwriting to God.

He thought,"Oh boy, I'll open this one and see what it's all about." So he opened it and "Dear God, I am an 83 year old widow living on a very small pension. Someone stole my purse. It had a hundred dollars in it which was all money I had until my next pension check. Next Sunday is Easter, and invited two of my friends over for dinner.Without that money, I have nothing to buy food with. I have no family to turn to, and you are my only Can you please help me?"

The postal worker was touched, and went around showing the letter to all the others. Each of them dug into his wallet and came up with a few dollars. By the time he made the rounds, he had collected 96 dollars which they put into an envelope and sent over to her. The rest of the day, all the workers felt a warm glow thinking of the nice thing they had done.

Easter came and went, and a few days later came another letter from the old lady to God. All the workers gathered around while the letter was opened. It read, "Dear God, How can I ever thank you enough for what you did for me? Because of your generosity, I was able to fix a lovely dinner for my friends. We had a very nice day, and I told my friends of your wonderful gift. By the way, there was 4 dollars missing. It was no doubt those thieving bastards at the post office."

It's as old as the friggin hills and a fixture on older non-digital switched AM rigs and can be as simple as a diode across the back of the modulation transformer. Yes, the cause of splatter is the clipping that results when you try to ask a final to produce negative power; it bumbles, stumbles, and fumbles a lot. So fine, you go to some asymetrical modulation scheme and pump the positive peaks to 120% (60% of carrier) which the tank will promptly make symetric again so you have successfully achieved 110% modulation; pin a rose on your nose and jump into the outhouse.

The problem is that a diode detector in the receiver is a proper mixer and will produce its own splatter even if you don't so your station phone lites up with people wondering why you sound funny. If you are familiar with HF (CB is lo-VHF) you have heard of selective fading where the carrier is bopped down by propagation, frequency selective fading, and sounds like crap to the diode detector. Most SW stations do not exceed 80% modulation for exactly this reason.

But about 10% extra power is all you are going to get before the phone company demands another line and your ratings head for the toilet. Most of these 'swing' schemes are in fact cute stunts invented in the late 1930's not to increase modulation but to let an overworked final and the generators take a bit of rest between abuse sessions; almost S&M in its concepts. The simplest ones, in vogue in the late 50s in the ham bands for about three weeks, rectified some audio and used it to switch the screen of the final to a lower voltage when you were not talking; BFD. This was once common on Short Wave and drove listeners nuts. It is called

Controlled Carrier.

The essence of these systems is that the audio either powers directly the carrier or is used to switch what does control carrier level. Even then, no one seriously believed what seems to be an article of faith on CB that the diff between 'dead key' and peak is audio so they didn't go hog wild about it. The big pusher was a tube company no longer in existence. The extreme of this was the standard Class C MOPA with a gimmicked modulation transformer and no B+ on the secondary, just an rf return that we called Mongolian Modulation and did for kicks.

You are coming close to the right answer with compression. The human voice has an average to peak ratio of about 1 to 4 or 5 which says that unprocessed you have 20-25% average modulation with the brickwall limiter set to 100. The best approach given that you can handle the resulting clipping crap is to simply crank up the audio against the limiter to get something in the 40-60 range which is in fact what most CB units already do. Yes, friends and fans, clipping the limiter costs you half of your 'talk power'. The broadcast jocks regularly run in the 70% range which is why commercials get loud and the rock jock's voice has no range whatever.

Compression and limiting have their places and the better units do both. Pure compression tends to be a bit eerie (like the preacher waving his arms, dancing, all at a steady volume) and can have the effect of hearing toilets flush for six blocks with no other input. Another approach common in communication circles is to rigidly cut all audio except between 300 and 2500 Hz and peak it about 1200; ever wonder why women cut thru the pile-ups? Nowhere is it written that communications audio need have fidelity.

Personally I would not be caught dead on Ancient Modulation but I recognize that there are those enamoured of 49 DeSotos. So fine but don't try to sell me on the idea that a DeSoto is the state of the art or anywhere near it.

He'll never admit it, because he would then have to admit that he doesn't know a damn thing about radio. Makes you wonder why he's even hanging around in this group, except maybe to incite arguments and threaten to crash firewalls.

...hmmm...chicken McNuggets....bird-watts....just a coincidence?
I think not!

I'll take speech compression anyday over CCM. With CCM (or NPC, or
whatever you want to call it), think about what happens if you
eliminate the sidebands -- your carrier is going all over the place!
In fact, you have achieved a secondary modulation envelope that
effectively defeats the AGC/AVC of the receiver! That doesn't make a
transmitter "loud", it makes it "annoying". But of course, that's what
being a keyclown is all about.

sparky, i agree with you and dont run my setup that way either. ive never liked the radios with super low dead keys and real high pep outputs. it sounds shitty to any cb running a noise blanker thats worth a flip but the fact remais it is done daily and a amp deadkeyeing 50 watts and peaking 600 is not at all rare

2620. REC. Radio.CB's North Coast night out with Dave & Mopar!

Newsgroup: rec.radio.cb
Date: 2002-04-28 20:42:44 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3ccc62b4@news.planetc.com>
Source record: 122485

I was planning to meet Moparholic to finally get to see him and to sell him an (illegal) non-N8 vooble approved 108" + 1/2" stainless steel whip that I have made to sell, so we wanted ALSO to invite ANY CB NG CB'ers ONLY to a restaurant in the Cleveland, Ohio area (where WE come from, it's CB's & Chicken!) on the night of May 10th or 11th (the night before yo Mommas day). Hams that want to come must be approved of first! This is because this NG is so full of so many BAD Hambos (commies), that I want to insure that it WILL BE a GOOD time for all attending. We will ALSO have a Classic CAR SHOW there too, with Mopar bringing his mint 66, where I will carefully show him how to install a ball mount on it so it increases the car's value; and I will also be bringing a Classic Car with a Classic Lafayette CB it it and a Classic 108" whip mounted on the back, with NO parts in the car OR the CB from China or Mehico (you got to see this, Hampton!) Plus after we eat, I will give 2 sermons entitled "WHY it is important to go to Heaven when you die," and "WHY CB is better than all the ham bands put together!" If anyone is comming from "Mo Town" (the Murder City), you can drop by N8's house in Toodah-Lee-Dew and see if DUG will a Dare come to meet us and shine our cars & antennas, and clean our CB's! Plus, IF we can afford it, we may fly JAY in to give us a talk on WHY it is important to CANE bad HAMS 27 lashes with a BIG STICK (or a 5 1/2' Francis)! Everyone will buy their own food, unless someone wants to pick up the tab for everyone, or this digital/analog CB preacher! To find out exactly where and when (ONLY IF seriously interested in comming), e mail Moparaholic direct @ moparholic@hotmail.com instead of me, since I won't be @ my e mail address when I am way up there on the North Coast! Mopar can call me when there to ask me if such & such Ham can come. Then IF you're approved by BOTH of us, you will be told where & when to show up in the Cleveland Ohio area. If someone has a laptop we may even be LIVE & direct on the NG during or after the event!
Rules for this event will be: NO drinking (alchohol), NO Smoking, NO Hambo radios, NO porkers, NO Govt. agents (especially those of the 6th plank), NO fighting, NO murdering, NO lot Lizzards (sorry Tim), NO Adultery and NO swearing! AND NO promoting of HAM radio! IF you can't abide by the rules, DON'T COME ! We don't want to see ya! All races welcome, (how do ya liberals like that!) but not all religions. (Sorry--I can't be "politically correct!") NO Mooslims, Muslims, Mohammedens, Towel Heads, communists, or any other TERRORISTS that say that it is OK to kill YOU (Thou shall NOT Kill)! NO ONE without a REAL e mail address need ask! (No Google).
Sorry Voobensteinovich!
Even IF this is your 1st time on the NG, you are welcome to attend, EVEN if you've never posted before! It is Guaranteed a GOOD TIME
(I have met just a few people from the NG before, and ALL of them have been GREAT PEOPLE. I want to maintain my belief that I have met THE BEST people on the NG. To insure this, rules have been promulgated to keep OUT the NERDS). You KNOW who you are!

Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!! See ya!!!!!

Jerry

L2N Design & Construction
6901 Emerald
Boise, ID 83704

SUBJECT: WARNING NOTICE--UNLICENSED RADIO OPERATION

Dear Sir:

Information before the Commission indicates that drivers for your business have been operating radio-transmitting equipment without a license on the Ten-Meter Amateur band.

Please be advised that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications Act of 1934, as amended, 47 U.S.C. Section 301, and will subject you to fine or imprisonment, as well as an in rem seizure of any non-certified radio transmitting equipment, in cooperation with the United States Attorney for your jurisdiction. Monetary forfeitures normally range from $7,500 to $10,000.

You are requested to contact me at 717-338-2502 to discuss this matter.

Once again you have totally missed the point, Tim. You can't accomplish CCM with an amp, it must be done at the point of modulation (not that you would want it anyway). If you are going to amplify AM or SSB the amplifier MUST be linear. NPC is a keyclown attempt to get CCM in post-modulation. An NPC amp is non-linear, just like a Class C amp, and just like a Class C amp it will cause mondo splatter and harmonics. Gee, haven't I said that before...?

Tim did I say Randy was gay? Did I encinuate Randy was gay? No I am just
going by what was emailed to me? Why is it ok for you guys to e-mail each
other about the AKC but when we get emails it is not ok?

here you are in this thread comming with some

I will also ask you again if you would like to see the email that was sent
to me?

>man get real and if your a fag dont be scared to admitt it.

Tim, how do you get me being a fag out of Randy sniffing bike seats? Good
batch of drugs this time?
Hell Tim you even admit that Landshark is gay and you want no parts of him.
You guys had better get your stories straight.

>
> No smoking? No drinking? What kind of 6th plank commie rules are

These aren't "6th plank commie rules." These are OUR rules to ensure a FAMILY FRIENDLY Good time atmosphere, which YOU shure don't want. Can you imagine what I would be called IF I put together an event allowing DRUNKS and DRUG heads to get messed up in! I would be called a Hippy-crit Freq. ! It will be enough of a "buzz" to have those in attendance SOBER. We ain't gonna have "whiskey bottles and brand new cars" there. We're having CB radios and Old, Old Classics there. NO long haired Hippy Freqs. there either. Family (Men & Woman) friendly. Do you understand that? If not, don't come!

> these? Hey Dave, this is a FREE COUNTRY! Who are you to tell anybody
> what they can or can't do in a FREE

First of all, this is NOT a "free country." It is a communist SLAVE democracy that has changed from a Christian Republic into it, and now you are in the biggest slave system since ancient Egypt! Did you file a 1040? Do you have a Drivers Licence? You ain't free--quit perpetutating the LIE! Plus, this is a PRIVATE event, where not EVERYONE is invited. The Supreme Court ruled that PRIVATE groups can DESCRIMINATE because dey ain't Public! I CAN discriminate, Biblically. YOU are the Hippy-crit Freq.!

COUNTRY? What facist dictator died
> and left you his job? You are the biggest loud-mouthed hypocrite in
> this whole newsgroup, keyclowns included!

How do you KNOW that I have a loud mouth? WHY are the "keyClowns"
HippyCrits? Maybe the HamCrits are the Long Haired Hippy Freqs.!
>

> > All races welcome, (how do ya

>
> Dave you prejudicial bigot, just because someone is a Muslim, or any
> other religion, doesn't make them a terrorist!

YES IT DOES. Muslim LAW says Jee Hod dey will KILL you if you is an
"infidel" (not a mooselum). Da Texas Star Texans do a Hee Haw on dem before
that! IF you luv da Mooslim, GO BACK to Afganistan where your spark gap
came from! Gee we HOD you out!

And do you think "towel
> heads" isn't racist?

"Racist" is a word created by the enemies of the Republic to divide
people, and make US accept their unscriptural nonsence. It is NOT in old
dictionaries. The Towel Heads have to wear them in the Towl Head countries
to keep poisonous spiders OUT of their hair while there. IN a Christian
country, we need no Buquas or towels; we ain't cursed by God yet to have dem
spiders fall on us!

Nope, he doesn't Tim,
If you haven't noticed he changed his screen
nic some 4 times in the past few days since I did
mention that about him. Now you can track his posts.
So it's obvious that he is here only to harass and
accuse everyone. Hey, if you remember Tim he
said I was Jason Halverson, put the post up
where Jason (Whom by the way I used to work with)
Used my terminal, got all my info and started making posts.
George proved it, then started back peddling right away
when I show him that.

Just in case George, here's the original post he made
using my info, Thanks Again George!!!!!

From: lndshark@ix.netcom.com (Jason Halverson)
Subject: Swap File and MaxPhysPage(in system.ini) settings
Date: 1995/05/28
Message-ID: <3q99e9$scf@ixnews3.ix.netcom.com>#1/1
distribution: world
organization: Netcom
newsgroups: comp.os.ms-windows.setup

I need to know the proper MaxPhysPage setting for the system.ini for
WFWG 3.11. I have 20Mb of physical RAM (20352Kb). The format is:
MaxPhysPage=<hex page number>, where <hex page number> is the maximum
physical page of RAM. I read that windows only recognizes the first
16Mb of RAM. I have an 11Mb Perm Swap file, but when I start windows,
I have only 23Mb free. Any help is greatly appreciated.

Please check, you'll see that good old Jason was using
numerous screen nics and accounts, so I'm sure I
wasn't the only one he did it too before he got fired.
Have to go now, Wife just got home from Reno with
a bundle of winnings, do yourself a favor and ignore
Mr. Busch of Leigh County Pennsylvania, he's not
worth it.

Landshark
--

Beware of George Busch WA3MOJ of Allentown Pa.
He is suspect to post from different ISP's, under
different screen nics, using anonymous mailers, just
to make harassing,accusatory style posts with
absolutely no useful content at all.

A guy that was paid very well to speak at a local business dinner rushed out the door so fast he forgot to grab his false teeth. Just before it was time for him to be announced, he turned to one of his table guests sadly and said to him - "I can't do this, I forgot my false teeth".

The guy looks at him and says - "sure you can - try these", and reaches into his jacket and pulls out a pair of false teeth.

The speaker tried them. "Too loose," he said.

The man reaches again then says, "I have another pair... try these."
The speaker tried them and responded, "Too tight."

"Ok, the guys says, I have one more pair... try these."
The speaker said, "They fit perfectly!"

With that, he gave a thundering speech. Af the speech, he went back to his table to eat his dinner and to thank the new-found friend that just saved him.

"I want to thank you for coming to my aid, said the dinner speaker...
Where is your office? I've been looking for a good dentist."

"Dentist? replies the guy... I'm no Dentist... I'm the local undertaker!"

Brainbuster.

A kid comes home from school and says to his mom, "Mom I've got a problem." She says, "Tell me." He tells her that the boys at school are using two words he doesn't understand. She asks him what are they. He says "well, pussy and bitch." She says, "Oh that's no big deal, pussy is a cat like our little Mittens, and bitch is a female dog like our Sandy."
He thanks her and goes to visit dad in the workshop in the basement. He says to his dad, "Dad the boys at school are using words I don't know and I asked mom and I don't think she told me the exact meaning." Dad says, "Son, I told you never to go to mom with these matters, she can't handle them. What are the words?" He tells him...pussy and bitch. Dad says, "OK," and pulls a Playboy down from the shelf, takes a marker and circles the pubic area of the centrefold and says, "son, everything inside this circle is pussy."

"OK, dad, so what's a bitch?"

"Son," he says, "everything outside that circle. "

Gonna have to think about that one a while. But if it knocks down the
clipping of over modulation it probably does help the second harmonic more
than the others.
>
> The bad? Too much attempt to apply "forward" swing by using a low

Take your word for it and as I noted some form of this has been on old-style AM broadcast transmitters since Custer was a staff sergeant. In their case, however, it was intended more as a doomsday device than a real help to anything.

>

This is not what I mean by asymetrical modulation but lots of things change meaning at 26.96 MHz

>

Or said another way the audio controls the carrier. Welcome to 1940 Taylor Modulation.

It's easier to do with tetrode finals via the screen but WTH.

And what do you have when you are finished? The first case does in fact increase peak modulation somewhat, the second merely produces swing without the advantage that vacuum tubes offer -- being able to beat them up a bit and extend the ratings.

But the fact still remains that a diode detector will not recover modulation in excess of 1/2 carrier power and the swing is more a case of faking the AGC than anything else which a good noiseblanker or a fast AGC will negate.

Sounds to me like vast effort toward a distinctly half-vast result.

2660. Dinner at Aaron's

Newsgroup: rec.radio.cb
Date: 2002-04-29 00:43:06 UTC
From: dweebospanka@aol.com
Message-ID: <20020428204306.02561.00008082@mb-dh.aol.com>
Source record: 122525

(Knock at the door) Aaron opens door wearing his skimpiest thong underwear

Aaron: Hi Sparky! How are you!

Sparky: I'm good Aaron. Is dinner ready?

Aaron: Almost. In the meantime, you can snack on me, but we need to hurry before George gets here.

Sparky:(screaming) Aaron! Will you shut up with the advances! I already told you I've started to like women now! Now leave me alone!

Aaron: OK, OK! I just thought we could be like the old days again.

Sparky: No, I'm really going to stick it out this time.

Aaron: (sniffling) Ok Sparky, have it your way. I'll respect your wishes.

Sparky: Where's George? Do we have to wait for him to eat?

Aaron: Yes, he's bringing the salad.

Sparky: OK. Got any snacks?

Aaron: I think so, let me check.

(knock at the door)Aaron answers the door.

Aaron:(exclaiming) George! My God! What happened to you?

George:(crying) I was just out minding my own business, following this little girl, and all the sudden, wham! Her Dad must have seen me and punched me. I had just asked if she wanted some candy too. I think I could have had her. Then the Dad pulled out of the window of my Pacer, and beat me some more. I think he dislocated my shoulder too.

Sparky: Can we eat now?

Aaron: Sparky, can't you see George is hurt? Go get one of the steaks for George's black eyes. And while you're in the kitchen Sparky, get some ice for his broken nose and busted lip too.

Sparky: OK, but I ain't eating the steak that you use on George's eyes!

Aaron: OK, whatever!

(Sparky spends fully 5 minutes trying to figure out which steak is the smallest, so he can have the biggest…then finally he returns)

Aaron: God Sparky! Why did you take a bite out of it? It's raw, for Christ's sake!

Sparky:(unintelligible mumbling caused by mouthful of raw steak)

Aaron:(grabs steak from Sparky and applies it to George's eyes) There now George. Is that better? Aaron knows how to make you feel better, doesn't he?

George: Yes Aaron, it's much better now. Thanks, you know I bruise easily.

Aaron: Hey Sparky, light the grill.

Sparky: Hey, those steaks ain't half bad raw! Do we really need to cook them?

Aaron: My God Sparky! Sometimes you act like a Neanderthal! Light the damn grill!

(Sparky goes out back, turns on the gas, clicks the igniter repeatedly, nothing happens. Goes back inside for matches and returns)

Aaron:(just as Sparky lights the match) NO! STOP!

(loud explosion)

Sparky: (screaming) I'm on fire! Somebody help me!

(Sparky runs back through the house with his beard on fire, screaming for help. Aaron and George race behind him with teacups filled with water)

To Be Continued

What I understand is that you still refuse to understand that they are NOT "doing it" at all. They are not accomplishing their objectives, but instead are wasting power and probably causing interference. They think that they can get a higher peak power by reducing the overhead with low modulation, but they are "doing it" at the sacrifice of intelligibility. If the point is to communicate, it just don't work like that, Tim. Especially when the overall gain is maybe 10%, which will net you about five extra feet of range on 27MHz. But I DO understand the keyclown priority scale: the wattmeter scores the highest; jamming other CBers ranks third; and actual communication comes in a distant 47th. So I suppose they ARE "doing it", and like you, they just don't know what it is they are actually "doing".

sparky by doing it mean it is not uncommon at all for a amp to dead key 50 watts and swing 600 or even higher or a barefoot cb to key deadkey 2 watts and peak over 30 while running AM. how many times will i have to keep telling you whats really going on before youll believe it?

You are correct, it is a democracy. It's a country where the
government is comprised of representatives of the people. Even YOU
have a say in how the government works, and all you have to do is
speak up. But you, Dave, would rather push your whacked-out beliefs
onto the majority when the majority has already spoken. And guess
what, Dave: the majority HAS spoken, and doesn't give a shit about
what you think, because if they did then this country would be far
more to your liking and you wouldn't be complaining about it! Does
that give you a clue?

> Did you file a 1040?

Well no shit, sherlock! I have no doubts at all that someone could throw together an amp that shows 5 watts deadkey and swing six THOUSAND watts. But what they CAN'T do is ignore everything that has been learned about radio in the past century where hundreds of thousands or millions of radio operators, techs, and engineers have determined that AM is AM and SSB is SSB, and you can't have the best of both worlds. And getting the best of both worlds is what they are NOT "doing", no matter how hard they try or many times they make claims to the contrary.

I'll put it in a nutshell, Tim. These power figures that include "swing", "bird-watts", "NPC", and all the other keyclown buzzwords are simply a ruse to get idiots to buy cheap amps. Nothing else. Do you want to work some REAL radio? Sell the holy wattmeter, buy or build a field-strengh meter and impedance bridge, take a short course in basic electronics, and study up on some antenna designs. Forget about "power" and focus on "communication", because REAL power comes in the ability to communicate (remember the old proverb about the pen and the sword?). Also, study up on audio. When you get old enough to get into the nightclubs, the first person you should talk with is the band's sound-jock. Hang around a recording studio. And best yet, visit your local radio and TV broadcast stations.

But for goodness sake, quit listening to these keyclowns!

Ok, then you are talking about operating in the non-linear part of the
curve near the bottom or top. It produces the same effect as CCM but
with more distortion, since the output is going to be horribly
asymmetrical.

>I remember the old National amps (NCL 2000) that were grid

I doesn't really "fool" the AGC, but rather defeats the purpose,
because the RF signal is dynamically expanded in relation to the audio
level, which is exactly the opposite for what the AGC is intended.

>Interference wise, I suspect this low dead key / hi peak
>swing thing might aggravate an existing problem. If a SSB
>radio were used instead, I suspect an equal amount of

>still be there but you cant understand it.

It makes more sense to just use SSB. It makes even more sense to use
SSB with a pilot carrier. If the keyclowns had any sense, that's what
they would be doing.

>Unless the amp or the driving radio is flat topped I doubt
>the "modulator" style of operation is any more severe than a
>comparable SSB broadcast. There may be a slight difference
>due to an existing carrier.

The difference lies in the use of two seperate modulation stages.
Don't forget that a modulator is really a mixer, and a second
modulator will be taking modulated AM and mixing it again with a
product from the signal level (which was a mixing product to begin
with). The possibilities are too extreme to contemplate this late in
the evening.

Dick, the biggest reason to run carrier controlled modulation is to
protect those delicate sweep tube amps. BTW, let's not forget that
ramming the amp into saturation isn't too good an idea, either.
Besides,
who runs Ancient Mary anyways?

snipped some more--------------------

No actaully, I wasn't refering to CCM. I was simply looking at the way a grid driven amp looks on a wattmeter when the input is lowered to barely more then a tickle. The gain being what it is allows even an unclipped radio to produce tremendous changes in output.

I remember the old National amps (NCL 2000) that were grid driven and the input was swamped by a 50 ohm attenuator before it hit the grid circuit. If you lowered the attenuation value, you could easily drive the amp to full peak output with a 5 watt radio. By limiting the drive power you could make this amp dead key about 150 watts and swing up to 1200 watts on a peak meter. (Mirage MP1or 2 I forget now which was low band)

As said before, I never saw the use in keeping such a low dead key compared to the max peak power mentioned.

Someone coined the name "modulator" for an amp that was run with a low dead key and high swing in output. I realize this amp will make you sound louder in the local arena but sounds like crap in the distance. I guess,as someone said before, this style of operation simply fools the agc circuits due to time constants. I can also see where having a larger swing might cause a larger output voltage from the detector. I never researched the phenomina so I can't say any more about that.

Interference wise, I suspect this low dead key / hi peak swing thing might aggravate an existing problem. If a SSB radio were used instead, I suspect an equal amount of interference but an unintelligeable one. I think it's how the interference is perceived which is what makes AM the worse offender. You can hear and understand a AM voice but given the same peak power in a SSB mode, the noise will still be there but you cant understand it.

Unless the amp or the driving radio is flat topped I doubt the "modulator" style of operation is any more severe than a comparable SSB broadcast. There may be a slight difference due to an existing carrier.

There are other "channels" per-say than what are listed, however the others are just duplicates. There is actually another page available with a chart that is far better laid out. The only problem is that the person who wrote the HTML goofed up, and thus the page doesn't even display. If you care to take the time, I can tell you how to get a functional page out of it, but you will have to save the page locally on your HD... If you interested, I'll give you the URL and tell you how to correct the page so you can see it...

In <20020428231426.09481.00006874@mb-fz.aol.com>, timnebo@aol.com420 (www.TimNebo.com) wrote:

>sparkles, ive confirmed contacts with 112 dxcc's on 11 meters and have worked a >grand total of near 200 all together.

Shove your signal out there and somebody's gonna hear it. Does that suprise you? The hit-or-miss method works quite well if you are collecting QSL cards. And if that's the case I shall refer you to Aaron's brain-damaged ass for one more.

> i know all about commincating but its >bullshit people like you that say things cant be done just because you've never >done it

I noticed that you conveniently avoided quoting my last post, so I will quote the relevant portions as needed:

What does this sound like, Tim? "I have no doubts at all that someone could throw together an amp that shows 5 watts deadkey and swing six THOUSAND watts." Sure looks like I said it could be done, didn't I?

What I said COULDN'T be done was this: "But what they CAN'T do is ignore everything that has been learned about radio in the past century where hundreds of thousands or millions of radio operators, techs, and engineers have determined that AM is AM and SSB is SSB, and you can't have the best of both worlds. And getting the best of both worlds is what they are NOT "doing", no matter how hard they try or many times they make claims to the contrary."

So are YOU saying that Davemade and X-force are incorporating some sort of RF technology that has evaded human understanding until developed by illegal CBers? Gee Tim, I never knew they were so technically advanced! Is this alien technology or something?

> or like in another thread when you told somebody a fm kit isnt >avalaible when thyve been out for years.

They were, but they aren't any more, are they? Besides, it wasn't really a "kit" per se, but more like a box that replaces half your radio. Since there are exports that do the job much better, why do you think these "kits" are rare now? Duh...

> and here lately you've been making it >seem as you've been some type of cb shop operation or something.

I have had my own shop since college, and it certainly isn't geared for CBs. I do fix them from time to time, usually as a favor to

regular customers, but a CB shop would never pay the bills. I do lots of things in the shop, including professional audio repair and maintenance, antique radio and guitar amp restorations, commercial radio install and repair, occasionally some ham radio stuff, and once in a while I'll get some kid from down the block who needs the battery clip soldered back on their transistor radio. I do most of my ng posting from my shop while I'm working, and I spend a lot of time working. I also do some freelance engineering, the latest project being a remote-controlled aircraft with ground-penetrating radar (involving the licensing of several commercial R/C channels, high-speed data multiplexing and transmission, and remote GPS positioning, all of which I need to design from scratch because the current stuff is just too heavy for the application). And everything I do at home is on top of my regular job (which is actually part time) as a broadcast engineer. And guess what, Timmy? There are a lot of people in this newsgroup with more experience in electronics and radio than I have!

So when you say that I haven't "done it", I probably have and already learned my lesson. Or when you brag that you have worked 200 DX contacts, you fail to realize that both me and radio have been around a lot longer than you have, Timmy. You say that you know how to communicate? You are very, very wrong. The better part of communication is listening. In order to communicate effectively you must listen effectively. It's obvious that you don't listen well because half the time you don't even understand what the other person is talking about. Do you ever wonder why I never post anything about things I know nothing about? It's because I'm listening. Do you know why I don't post in antique radio groups or radio broadcast groups? It's because I'm listening. So learn to shut up and listen, and you might just learn something. Otherwise, get used to people calling you a twit.

Now there is a pregnant comment with which I fully agree. Aside from wasting some spectrum space DSB would do the job and would allow a synch detector to lock up on it and deliver the tuning ease for mobile operation that is probably the only justification for AM/FM in this day and age. SSB filters cost money :-)

And it would bring us technically past WW2. A DSB, synch detector layout was GE's competition to Art Collins's SSB when Strategic Air Command replaced their Archaic Modulation gear back in the Stone Age. SSB worked so well that Ancient Mary was outlawed for most purposes in 1972.

Talk about receiver-dependent systems. This would drive the peak power freaks stark raving mad.

> But what if they're talking on their Ham Gear?

Fair enough query. If you know that they're running ham gear and
they're causing harmful interference, inform them that it's a problem
for you. If they're causing TVI/RFI because of the gear they're
running, then they fall under the "UNLESS, they're there to cause
trouble" clause. The only way you'll know, quite frankly, is if they
tell you. In the real world, I'll take a guy running a clean 30 watts
on the legal 40 via ham equipment over a dolt running legal gear with
a sloppy antenna system and a poor RF ground any day of the week. I
know this does not fly well with the politically correct POV of
"strictly by the book," but hey...that's the real world for you.
(IMHO)

Having said that, I do remember the "freeband" incident some years
back when some voices parked on 27.555 MHz and heckled, threw dead
carriers, and dit-bombed away. The same voices were later heard on 10,
15, & 20 and associated with real live folks. I don't know what
exactly happened after that, (Anonymity breeds false courage.) but it
DOES go to show that it works both ways and I understand that. So in
that context, I do understand what Dave's actually asking about. But
there are plenty of hams who are also 11-meter ops (Or CBer's, if you
prefer.) and are more than happy to help those who want (& can
appreciate) it.

Nice idea, but if that were allowed then the CB would be full of 30
watt hams overrunning the only band that was meant just for the dolts.

I got to thinking about this and something else occured to me. If
there is a swamping attenuator on the grid, and if the grid is drawing
current, then it's hard to tell just what will happen. Maybe Dick can
provide some insight into driving a grid with a fixed impedance
source. One thing I can say for certain is that, when drawing grid
current, a swamping resistor or attenuator is a pretty weak substitute
for a properly tuned grid circuit.

> the 70's experienced the exact same conditions as yourself.

I am not unique in that respect, so yes, the conditions at any given area, would be similar. Besides, I have a baseline comparison. I can compare the conditions between sunspot cycles 21, 22, and 23 from my same location, using the same gear, so the only things that can be different are the level of the sunspots and the amount of people on a given frequency and the amount of power they are running. From the charts, the average level of sunspots in this cycle are less than the last cycle, yet the average signal level is greater. How can this be? Simple, more people, or more people running more power. It's elementary, even for you.

"Good DX" is a subjective term. I don't consider it good DX if I have to compete with Kilowatt stations to work stateside. To me, "good" DX is working South America with 25 watts.
On the legal 40, with S meter levels rarely dropping below S9 during the day, it is impossible to hear anything above the clatter of the power stations. I am not making this up.

> are not inherent to DX, and propagation is not inherent to amps, but has
> a direct link with channel (freq) allocation.
> It can not stand on it's own, therefore is discredited.

What? You're starting to go "twisted" again. Your statement makes no
sense. Please don't try to assemble logic, you're not very good at it.

You have not discredited my statement, simply because you missed the
whole point. And that point is again, in simpler terms that you'll
hopefully understand this time, is that there is no difference in the
degree of propagation between 27.025 and 26.005, they both have the same
"skip" potential. Yet on 27.025 I get solid S9 and above noise, while on
26.005, the meter sits at S1 to S2 until a station decides to come in.
The difference? Less people, and less people running power. On which
frequency would you best be able to work a REAL DX station (real DX is
not another state)? Which frequency would you be better off trying to
have a local roundtable with stations 10 miles away?

Conclusion: The sunspots are not creating the noise level, the people
using the channels are. The more people that there are, the more noise.
The more power those people use, then even more noise.

>
> >and therefore huge amounts of power aren't required.<<
>
> They're not required at all for DX. Point?

Power should not be required if the frequency that you use is fairly
quiet. Working DX on the freeband can be done with 10 watts. Try that on
the legal 40, and you'll be hoarse before you've made any contacts. Your

10 watts will be buried in the static created from all the power stations.

If you and another person are seated at opposite ends in a large room, you can have a conversation, without really raising your voice. Now put about 100 people into the same room, all jabbering among themselves, and try to have that same conversation. Do you think it will be just as easy? Now put in a rock band with large amplifiers. Can you still have that conversation? The room(propagation) is still the same, but the ambient noise (Users of the frequency) have increased to the point that you ca no longer override the background noise.

>
> >The bottom line is that people using amps are a major contributing
> factor to the high average noise level on the legal 40 during peak skip
> cycles.<<
>
>
> Mother nature is adjusting her power levels as we speak.

Thank God! Now the band might become habitable again.

I might beg to differ on that statement. There were people who ran
amplifiers then, but they were mostly in the 50 to 300 watt range. A far
cry from the several kilowatt amps that many guys routinely use now.

>I really don't know where you get this notion that the reason that you can't

All of my radio's are calibrated the same way (50 uV = S9), and I DO
still have the same radio that I ran as my primary base radio back in
the 70's(Along with many others).

You're right that the sunspots are not always the same. But looking at
the charts, for the last 3 sunspot cycles shows that cycle 23 is not any
stronger than cycle 22, and only slightly stronger than cycle 21. Yet on
average, the skip level is higher now. The difference? Amplifier use,
and the proliferation of the same.

http://www.dxlc.com/solar/cyclecomp.html

That should be a good start. Notice that cycle 23 is not nearly as stong
as cycle 21.

Nope, I use that face when I taunt you.....

Besides, I was talking practicality here, not strictly legal. From a purely interference standpoint, I would much rather someone stay at legal power levels, and seek out an alternative frequency to conduct business, rather than spread dirty RF with a poorly designed "Gutbuster 500" amplifier.

hi sparkles, i said 200 dxcc's not 200 contacts. know the difference? if youll notice i havent qutoed anything in a couple days. my mouse has broken and i'm working off the keyboard only so its more difficult. as long as you admitt an amp can dead key low and swing high then i'm right and the discussion should be over because thats all i wanted you to admitt since you and dick made it seem impossible. now in another thread cody has dick contemplating NPC and how good it works in which whats it do??? thats right it dead keys very low and swings really high. nobody is trying to get the best of both worlds as regards to am and ssb. there trying to have a neat movement on the meter while sparing the expensive sweep tubes they have to buy. and why are you bringing up xforce and davemade? i've never owned one of either so email them and ask.

Maybe it isn't where he is, but I find little difference in the ambient
noise on any of the legal 40 when the sunspots are running. Even channel
9 has idiots on it. Some channels may be slightly better temporarily
until some loudmouth discovers it and starts cranking up the power.
The absolute worst channels are 6, 11, 19, 26 and 28.

Any time you run an amp in a mobile, and see peak output fall short of its rated output, I would suspect voltage drop. You have to use fairly heavy cable directly to the battery, and as short as possible. I would go with at least 8 gauge wire for this amp, unless the run is less than 10 feet, then 10 gauge would be ok.

Deadkey power is simply a function of how much drive you are putting into it. If the radio is outputting a properly tuned up signal, which allows 4X deadkey power for full modulation, then it should properly drive the amp.

Are you sure it's really a "receive" problem and not just a meter problem?
I've seen many radios with the same meter type as the 148, start to stick after 10 or more years. Also the potentiometers can get dirty and allow for misalignment.

The way to determine if the receiver is truly weak, as opposed to a misreading S meter is to listen to a weak signal on both of your radios. If you can hear the weak signal the same regardless of the S meter reading, then the radio's receiver is probably hearing ok. But if you can only hear the weak signal on your other radio, then the 148 is probably weak.

Receivers are far too complicated to troubleshoot over the internet. The usual suspect of sudden loss of receiver sensitivity is the RF front end transistor, which can get damaged in a near lightning strike. Other than that, there are many things that can go heywire in the receiver, any of which could be a problem. If the radio is an older version (greater than 10 years), you could have problems with electrolytic caps drying up and changing value. This would usually happen gradually over a period of time.

Are you up for a radio project? Or are you just trying to save a few bucks? Adding FM to a radio like a Cobra 25 is not the most efficient use of funds. There are radios out there that can be had for not much more that already have FM installed and tuned by the factory, which should result in better performance.

That being said, if you just like to tinker to see what you can do (I can relate to that), it is not too difficult to do. There are FM I.F./discriminator chips available that require very little in external parts (Usually a crytsal, and I.F. filter and a couple resistors/capacitors), that can be built on breadboards or a custom PC board if you're so inclined. The input signal for the FM board can be tapped right out of your 455khz I.F strip, and coupled into your FM receiver board. The audio output can be switched with the am right at the volume control.

Transmitting on FM is even easier. You first have to disable the AM modulator by removing the modulated B+ from the transmit driver and final, and tying it to a 13.8 V rail. Then apply some of the transmit audio (A suitable attenuation and pre-emphasis network can be constructed by trial and error) to the PLL VCO through a potentiometer. Set the max deviation for 3 to 5 Khz. It is helpful to allow to modulation limiter to function as this makes it easier to keep from overdeviating.

It's a bit of work, especially working the switching so that you can maintain AM as well as FM operation. But it's fun to do.

Sparky@cet.com snapped:
>I have had my own shop since college, and it certainly isn't geared for CBs. I do fix them from time to time, usually as a favor to regular customers, but a CB shop would never pay the bills. I do lots of things in the shop, including professional audio repair and maintenance, antique radio and guitar amp restorations, commercial radio install and repair, occasionally some ham radio stuff, and once in a while I'll get some kid from down the block who needs the battery clip soldered back on their transistor radio.<<

Yea, you also claim pirates and freebanders affected your work but refused to answer how so you obviously understand why we may choose to disregard most of your other claims.

>I do most of my ng posting from my shop while I'm working, and I spend a lot of time working.<<

Actually, you seem to spend more amount in here..'round the clock.

>I also do some freelance engineering, the latest project being a remote-controlled aircraft with ground-penetrating radar (involving the licensing of several commercial R/C channels, high-speed data multiplexing and transmission, and remote GPS positioning, all of which I need to design from scratch because the current stuff is just too heavy for the application)<<

I remember pissing you off way back when for failing to recognize you as you wished. The truly great minds of radio and electronics among us don't have to brag, only those with low-self esteem who hate themselves feel they have to constantly make nameless, faceless, strangers aware of their accomplishments.

>And everything I do at home is on top of my regular job (which is actually part time) as a broadcast engineer. And guess what, Timmy? There are a lot of people in this newsgroup with more experience in electronics and radio than I have!<<

And the amazing thing is, they don't have to brag concerning their accomplishments. If you have arrived, you would comprehend this as well.

>So when you say that I haven't "done it", I probably have and already learned my lesson. Or when you brag that you have worked 200 DX contacts, you fail to realize that both me and radio have been around a lot longer than you have, Timmy.<<

So by default, age somehow makes you better or makes you know more? Oh man, you are a shining example of a lid that feels age or virtue of

license somehow makes you better than others when in reality, you are quite delusional and narcissistic.

>.You say that you know how to communicate? You are very, very wrong. The better part of communication is listening<<

And your personal attacks and insults and name calling falls in that category?

>. In order to communicate effectively you must listen effectively. It's obvious that you don't listen well because half the time you don't even understand what the other person is talking about.<<

You aren't real clear when explaining yourself..you have a tendency to wander off topic and insert personal attacks whenever your self-control wanes.

> Do you ever wonder why I never post anything about things I know nothing about?<<

Quite the opposite, I assure you.

It's because I'm listening. Do you know why I don't post in antique radio groups or radio broadcast groups? It's because I'm listening. So learn to shut up and listen, and you might just learn something.

I can honestly say I have learned PLENTY from this group, but nothing from you. AS I said b4, once you lie, everything you say is suspect from then on, whether it's a subject that you actually are informed of or not. You did it to yourself, and your image is all you are concerned with, evidenced by your laughable but repeated attempts at sharing your lack of education with us. Tech institute or junior college? Never mind, I already know.

>Otherwise, get used to people calling you a twit.

You're saying that most 148 conversions
don't go into the ham bands. I have seen probably
three to four dozen 148's converted and virtually
85% to 90 % went onto the ham bands.

There were two major phases in the conversion from AM Class C to SSB and linears. In the first one the old guys had to learn what 'linear' meant and in some ways it was not a lot different than here. Then came the solid-state exciters with ALC and shutdown that often did not like the input of the old linear that the tube exciter more or less matched. And for the most part you had drive out the ying-yang. All led to 'swamping' which the Handbook railed against for many years. When lo-drive became illegal, the Grounded Grid Class B became more or less standard, typically with untuned inputs, and the issue disappeared along with grid driving.

With proper isolation it can work but it does severely reduce grid tank Q and imposes a real load on the bias supply which almost has to be a brute and regulated to boot. All in all, swamping is a cheap and cheesey way out of the problem.

Perhaps, but I don't think so. The CB world already has a significant
number of people (Both hams and non-hams.) who routinely run 30 watts
out of conservatively throttled ham gear and we're really no worse for
the wear. Getting them to fess up to this is next to impossible, so it
sorta becomes like the proverbial tree that fell in the woods with
nobody there to hear it. Personally, I just don't have a big problem
with ANYBODY who runs a clean station on the legal 40, regardless of
what type of gear they're running. In case you're wondering, since I'm
fairly vocal wrt 11-meter issues so I keep my nose particularly clean.
Although I can't say that I worked all THAT hard for my extra ticket,
it be dumb to risk it over a couple of extra watts. The Grant XL does

just fine. :-)

As a FYI to the group, the AM-COM ClearSpeech DSP enhanced external speaker is a great GREAT enhancement to any station.

Does anybody remember those FM boards that Uniden made for
the Teaberry's and Cobra 2000?
They were a neat little kit that came with everything you
needed to install a decent fm section in these radios.
Not only did the kits come with an fm board but they had
another xtal to put the radio into the next 40 channels up.

The kits consisted of a push/pull switch on a volume control
connected to the board with some short leads.The board had
Uniden markings on them and they consisted of basically what
Dave described. A Fm demodulator IC and the correct filters
for 5khz deviation recovery. There were a few other
components to support the tx side of things and some dc and
audio switching.

Maybe you can inquire at some of the older distributors and
see if they'll look under the dust on some shelves.

Dave, THIS is have to see. What are you going to do when perhaps 30% of
the folks comming to this even have modded RCI radios?
1) Where are they made?
2) Are they almost invariably modified 10, 12, and 10/12 meter HAMBO
radios?
3) What about the modified 10 meter rat shack radios?

Sparky, I've had to chuckle reading some of the amp 'facts'. Um, 'twas said that one of them had 179 degrees of conduction, therefore was a class C amp. Hmmm ... 179 degrees of conduction? Anyone with half a brain knows that whatever angle of conduction one has (or thinks they have), the amp is biased into cutoff. Therefore, it will take a certain minimum signal level just to get it to 'blip' for even a degree. The more signal, the greater conduction. Which is to say, that for lower levels of drive, you have less conduction and more distortion. For higher levels, more conduction and less distortion - but what you really want is a class ab or b. Anything biased into cutoff will yield distortion (except for FM, CW, RTTY, or other signals with no amplitude components in them). Of course, drive the thing hard enough and you hit saturation (more distortion). Given a hard enough drive and a deep enough cut off, I am beginning to believe these claims of 75% efficiency.
You can achieve that when you are running what is rapidly approaching 'switchmode' amplification. 75% efficiency and a 750 KHz bandwidth.
In the words of Mr. Spock, 'fascinating'.

Sparky,

I didn't fully describe the input circuit to the NCL.

The attenuator is not DC connected to the grid. There is a
cap in between the grid (and its bias supply) and
attenuator.

I forget now if the factory version used a bank of tuned
circuits at the grid or just the attenuator to provide a
stable load for the hi power exciter. I don't think it

bandswitched the grid. No point in it and would likely make the unit prone to oscillation.

There's times when a tuned grid circuit is useful. In the case of an amp like this it isn't needed. It's better in this instance to just swamp the grid with a low impedance, like an attenuator, thru a series cap. This does away with the likelihood of oscillation caused by a tuned grid-tuned plate feedback path. The grid is held unconditionally stable because it has a very low ac impedance due to the swamping resistors attached.

Mr. McCollum,

I don't see why you call it cheesy. Swamping the grid works great. It removes the inherent disadvantages to grid drive. It simplifies the circuit and removes most instabilities associated with tuned grids. Of course this only works if you have enough drive to get thru an attenuator which even a cb has.

Your reasoning about grid tank Q I find difficult to worry about. Unless you're driving source is only capable of milliwatts you really don't need a grid tank circuit. Without a grid tank circuit there is no need to worry about Q. Without a high value of Q there is much less likelihood of oscillation due to a tuned grid/tuned plate feedback path. The swamping resistors provide a very low ac impedance to ground which, for all intents and purposes, stabilizes the tube very nicely.

The bias supply is not an issue. The bias voltage is on the tube side of the coupling cap which is placed between the grid and swamping resistors. The bias supply would be the same one used if a tuned grid circuit were there. You would use the same value of resistors to stabilize and regulate the bias supply had the tuned circuit been there.

With the appropriate values of resistors in an attenuator, you provide a stable load for the exciter without bandswitching, lower the AC impedance of the grid so it cannot easily contribute to an oscillation condition, minimize the component count and minimize the complexity of tuning. What could be that much better than this in ease of design or use?

Tim, DXCC is the DX Century Club, an ARRL-sponsored award given for confirmed contacts with 100 countries on the ARRL list.

Since the ARRL is a legitimate organization of licensed amateurs, there is no way an unlicensed bootlegger could be awarded this.

Perhaps the freeloaders have made up their own version of DXCC. Sure....pirates that make up callsigns and avoid giving exact locations...yeah, that's a believeable award.... :)

That makes little difference, because the current is AC with a DC component, and when the grid draws current it does so by making a transistion from drawing no current at all. The result is part of the cycle is very high impedance but quickly changes to a lower impedance on the rest of the cycle once the grid goes positive. This drastic and abrupt impedance variation demands an input tank with high-Q and low impedance (impedance must be very low because it cannot be matched).

>I forget now if the factory version used a bank of tuned

The exciter must be loaded regardless. A good amp will have it's own driver, and a good push-pull may use the driver as a phase-splitter as well. Neutralization is used to prevent oscillation both in the final and the driver. This permits the proper use of a tuned input (and output) circuit.

The grid is high-impedance with or without the swamping resistor. The purpose of a swamping resistor is to provide a low-impedance -source- to the grid in a wideband application. But because it doesn't have Q you will never get the impedance as low as a tuned grid circuit, and the distortion will always be significantly higher. You can compensate to some degree with the output tank, but I think you will agree that

it's easier to eliminate noise -before- it's amplified.

Ah, it's the needle thing! They need 600 watts and crappy RF just to watch a little red needle bouce up and down. That's about the height of moronic pleasures.

And just for your info, sweep tubes suck as RF amps. They were not designed for RF, they are terribly non-linear (which probably accounts for part of the "swing"), and they burn out quickly for reasons such as excessive operating frequency, poorly designed output circuits, excessive RF power peaks (they were built to handle high-power 'spikes', not high-power 'sine waves'), and inadequate grid protection. Sweep tube amps were intended to provide cheap power with cheap results, and the only thing that's changed is the price of the tubes.

> and why are you bringing up xforce and
>davemade? i've never owned one of either so email them and ask.

I stand corrected, but the point still stands: the amplification method is bogus because the power is pumped up just to sell the amps, not to communicate more effectively, and with total disregard for distortion and interference beyond the operating frequency.

>hit saturation (more distortion). Given a hard enough drive and a deep
>enough cut off, I am beginning to believe these claims of 75%
>efficiency.

It just doesn't make any sense, since there is no added efficiency over a B or AB, yet has the cutoff distortion of a C without the tank. It's like an amp using the worst of both worlds.

>You can achieve that when you are running what is rapidly approaching
>'switchmode' amplification. 75% efficiency and a 750 KHz bandwidth.
>In the words of Mr. Spock, 'fascinating'.

Hmmm... wideband switchmode... very scary!

> many times they make claims to the contrary."

From an anthropological point of view, the arguments taking place here
follow a familar pattern.

I have a theory, which is that the keyclowns (a blanket term for
illegal Cbers) have broken away from traditional electronic theory --
and are operating within an ENTIRELY different paradigm.

Like religious dissidents who secede from an established church, the
keyclowns have departed the mainstream of CB and have created what I
term "keyclown CB".

In "keyclown CB" the rules of logic, law, and physics no longer apply.

I am still in the process of gathering info on this fascinating study.
Apparently there are many 'constants' that govern keyclown CB, such
as...

* transmitter power = bird watts
* swing = efficiency
* distortion = modulation

Perhaps you can share your findings.

Really Moped, how about this right off giganews web page you stupid
imbecile, why not post some more stupid lies LOL you are a true Jackass.
Point us in the direction that states what you say as the truth?
Acceptable Use Policy (AUP)
The following is the policy all customers must abide by when using their
Giganews service. It outlines the various acceptable uses for your account
and what we consider abuse. By signing up and/or using your Giganews
account, you agree to abide by this policy and to keep updated on changes.
This policy may change at any time.

Account Services
All Personal Giganews services are single user accounts. These accounts
should be used by the owner of the account only, and there should only be
one concurrent login session at any time. Failure to comply with this
regulation is in direct conflict with the Terms & Conditions which every
customer should have read and agreed to.

Net Etiquette and Abuse
At Giganews, we would like every customer to have the best Internet
experience possible; however, we do not wish it to be at other customers'
expense. The Internet is a global computer network which is comprised of
people from diverse backgrounds. When communicating with people on the
Internet, it is best to keep in mind that there is another person on the
other end of the computer that you are communicating with. Please treat
others with the same respect as you would like to be treated.

a.. Copyrights
Almost every country has copyright laws. Giganews cannot and does not
review the information flowing through or stored on our system. When you
become a Giganews customer, you are agreeing not to transfer or store
copyrighted works on our system without the permission of the copyright
holder.
b..
c.. Content
The content of USENET newsgroups is not regulated by Giganews; therefore,
Giganews is not liable for their contents. Please do not contact the

administrators regarding copyright issues, inflamatory posts, etc.

a.. Commercial Posts
Commercial posts are frowned upon in many newsgroups. If you are attempting to sell goods or services, please make sure you do so in the proper forums (*.forsale, business groups, etc.).
b..
c.. Chain Letters/Pyramid Schemes
According to United States law, chain letters and pyramid schemes are illegal. If you are found to be posting these to the newsgroups, your account will be terminated.
d.. Binary Posts
Certain newsgroups are specifically designated as allowing binary files to be posted, and some are designated for binary posts only. It is well accepted all over Usenet that binary files will be posted only in designated groups. Posting of binaries or text articles inappropriately, regardless of whether explicitly stated in a newsgroup charter or FAQ will bring your account under review for possible termination.
e.. Spam
Spam is the repeated posting of articles to inappropriate newsgroups. Giganews does not tolerate spam in any form. We run filters on our incoming and outgoing feeds to cut down on spam traffic that goes in either direction. Giganews is very strict about spamming. You agree to not spam, and you agree to avoid heavy repetitive posting, as that may look like spam. If you are determined to have spammed, you will be charged a $50 cleanup fee per spam message that you post, and your account will be terminated.

The content of USENET newsgroups is not regulated by Giganews; therefore, Giganews is not liable for their contents. Please do not contact the administrators regarding copyright issues, inflamatory posts, etc.

Corrections sorely needed to make sense of this garbage.

Look little perv, I killfiled Sparky, and I would you, but it would be very tiresome to add your nic-of-the-day to the list. Just be a man and stop making requests for Frank. I'm sure he's getting tired of cleaning your drool from his shoes.

And yes, the information you found is on QRZ.com, big deal. You're no wizard. It's been posted before.

BTW, when you going to post the letter? Hehe! And you call me a putz! I make no deals with anyone, and lord knows if you had dirt on me it would have been posted long ago.

Now, go away insect.

I just got the email a few days ago and I will post it when I see fit I make
no deals with anyone Randolph.I sure do have dirt on you but when i finally
do post it you will deny it like Landshark does, or will make some excuse
like you normaly do about how busy you are . So when will you answer Sparkys
question or will you duck it like everything else.

Putz!

I didn't know that. Interesting.

> Sparky was screaming from the lectern of the FLAT EARTH SOCIETY!!!!

You are stuck in a time-warp, Train. Those keyclown methods which you
are defending are poorly applied variations of techniques that were
abandoned over 50 years ago. The electron tube has been around almost
as long as radio itself, and just about everything has been tried with
them. Some things work and some things don't, but keyclowns like
yourself refuse to pay attention to lessons already learned in favor
of "swang" and "bird-watts". I am not the one resurrecting disproven
theories, Train. So what's next on your drawing board -- a mile-long
hydrogen dirigible?

And as far as the Flat Earth Society goes: the Constitution declares
that all men are created equal, but it doesn't say that all men are
created equally smart. There is lots of room in this country for
gullible people, and the CB amp market thrives on them. So maybe you
should attend some of those FES meetings -- you might be able to sell
your amp!

My My my,
Weren't you and the other legalese all
saying on how you had better be right?
Wow, another name to add to my list
of alias, I guess. I say go ahead, write him,
e-mail him, phone him, visit him.
Please tell me how it goes, I'd be curious
to what you three will make of it. I was very
interested Helmut with the one post that he
sign's his name with my addy, could you or
Frank give me the entire header or what google
search you did? My records on that hard drive
just doesn't show anything that day on my
terminal, it would be a great help. I just don't
have that much time lately, got to, taking a ride
up to Yosemite for the day.

Landshark

PS I also included his name & address again,
please feel free to call him. Also, thanks again
for just proving my statement that someone else
was using my setup, I couldn't have done any better
than you three did to prove me inocent.

Back in the days, when 807's were a dollar a carload, there was a
competition among the techies to see how much power could be run to a pair
of them. The winner was somewhere over 800 watts which is pretty good for
a 6L6 with a top cap and about 20 watts dissipation. Course it took
several other pairs to drive them 92 miles into Class C. Wonder what the
plate tank looked like with about 20 degrees conduction angle.

I was reminded at lunch with a retired TV station engineer of another
contest: Metal 6L6s water-cooled. Ice was legal but dry ice was not.
They got well over a kw. Good thing they ran well upside down.

These things used to be done for shits and giggles and the results, glass ones at least, made admirable shotgun targets. Now we got guys like Train doing similar things and thinking that someone ought to buy them.
Surrealism is neat but when carried to extremes it makes one wonder where he stepped thru the warp.

Hi Aaron (Mark) and Dweebo Spanka (Doug) how are you losers
doing today?? I see we both still have no life eh? Still ranting here
about those nasty freebanders and federal criminals I see.

Anyway......Whatta ya suppose would happen if someone set up a web page
with one of those little programs on their server that interrogates your pc
for personal information,
you know, like your name, address and other such info, ip address etc. and
then
posted some bait for you, something that you just had to look at, to get you
to look
at it. Hmmmm. Interesting. I'll bet when you hit that site and your pc gave
up that
information, you never even knew it. Whatta dilemma. I wonder who would be
willing to pay to find out who Aaron H. Voobner REALLY is?? Do I hear an
opening bid of $1000.00 ?

Use a Wilson 1000 magnet mount. Need the linear sometimes (usually only half strength) to "punch through" when I'm last vehicle and trying to communicate with lead vehicle and terrain is a bit rough. Will look at the 575. Thanks.

Assuming you know enough to recalibrate the SWR bridge, and if you are dumb enough to post in all caps that is not a given, it sounds like the unit is playing oscillator and has some real problems.

I would suggest turning it on and going out for a brewski. When you return and get the fire department out of the way either the amp will have reached Nirvana or your neighbors will have torched your house to cure the interference.

It doesn't matter to you George, I can tell you that a stop
light is red, and because I said it you will try to refute it, you
just want to argue, plain and simple.

>
> If you didn't try so hard to convince people that you

> never read this i am killfiled it is all in vain I guess

Oh but George I have and anyone that has e mailed me and
asked I have been more than happy to send them the info they ask, including
names, phone # and address. So keep wishing
LMAO!!!! What a buffoon.

>... Let,me know
> about the Buell dealership next time you go there bikers hate fags but
then
> again san Fran loves fags...
>

Now George again, please e mail me direct about which one you called, I'd
like to hear about it. You are blowing hot air again and you know it. For
$12.00 dollars anyone can get a
copy of the land deed at 1385 DEVON CIR, ALLENTOWN, PA 18104, Leigh County
Offices, so please don't cry

Now Tim has pegged you, Randy pegged you and each time
you post you make one more convert against you, so keep
up the good work.

Again, another for the kill file, keep changing, you do it
enough, and enough people complain, even your secure
hiding place of Giganews will pull you.

Landshark

Whoops, my mistake, it's the Super Lynx that keeps popping the
electrolytics; the SBE has an intermittent squelch problem.

Thank you, Mad Boris, for Bozo*Flush!!!!!!!!!!

Incidentally, some twit is trying to send me a bug. Probably tried
several times but I only caught the one that came while I was on which did
at the time get by the front-end screen with which I happily delete
Koreans, work-at-home offers, MLM scams, and wanna-see-my-seester teenage
enema nurse in bondage pix plus virtually everything with an attachment.
And McAfee caught that one. Oh well.

Randy, you are a piker. I get about 45% yield at most opening this
newsgroup. And yes, you have been Bozo*Flushed for being a Bozo.

Dick NBK

A Bozo? OK Dickieboy. I only respond when I am attacked, or see that
something someone posts is obvious BS. You on the other hand, feel the need
to post whatever drug induced ramblings may wander through your
semi-conscious, although Idiot Savant controlled mind(you do have your
moments).

2762. Mounting a vertical to a pine tree??

Newsgroup: rec.radio.cb
Date: 2002-04-30 04:51:17 UTC
From: Scott McClements <yetbbwa@grove.iup.edu>
Message-ID: <3CCE22C5.F8CF505A@grove.iup.edu>
Source record: 122628
Cross-posted to: rec.radio.amateur.antenna,rec.radio.cb

Hi - I searched the usenet archive for information on mounting a vertical to a pine tree. There seemed to be a lack of information on the long term effects of the tree on the mount. I guess this might depend on the type of tree. Anyway here is what I want to do:

There is a "pine" tree in the back yard. I tried to figure out what specie it was, but couldn't definitely tell. It doesn't have a single trunk. Anyway, I want to top the tree and either use Radio Shack's chimney mount OR the 8" mounting brackets. I want to mount a 24' foot fiberglass vertical to that (Solarcon IMAX 2000)

Which is the better long term reliable, not kill the tree mounting scheme - the strap around the tree or the lag screws into the tree?

Anybody have any more detailed info from experience (on coax routing, securing, how long a lag screw, type of hardware, etc. etc.)?

Thanks!

Scott.

Hi Scott,

The reason why your tree has more than one vertical trunk is that it has already been topped (a poor tree maintenance issue, or a problem of damage). Topping will not improve your situation. Of course, you may be forced to so that you can work with an adequate trunk diameter and clearance for the vertical - but this will mean yearly maintenance, or every other year perhaps (your mileage may vary).

Strapping the tree is the same as strangling it - an even poorer way of topping it which returns us to the same problem.

Use very long lag bolts to allow the tree to grow out radially without enclosing the end of the bolt set out and away from the trunk. Trees grow up only at the ends, and out from the sides. Any cable run down the trunk and secured (with long lags for the same reason) will not suffer any tension (except from the bending motion in the wind, think of an archer's bow and provide slack along the way). I typically have at least four inches of lag bolt exposed when installed. This is for Maple that grows as fast as grass (actually, faster); evergreens are slower but mine don't break in the wind as much as the Maple.

Yes, i'm sure its not just the needle, its the receive audio level, the fact i hear things on my other radios that i USED to be able to hear on this radio. I realize also that a radio can have better or worse receive than another, but not such a significant difference specialy when the radio worked well before. I do appreciate the comments i've had and will be contacting a few people but i've tried the quick simple fix's of re-alignment, checking a few suspect components and doing some cleaning, but as of yet no luck.

And this could be, it is a older Taiwan R.O.C 148, and i was hoping it wouldnt come to that lol.

Again, thank you to all who replied,

Great info. What size lag bolts do you use? Also, if you leave 4 inches of lag bolt exposed - how do you handle the extra length sticking out? Did you make up a ~4 inch spacer that slides over the lag bolt (that would hold the mount out at head end of the bolt)? Are you using a vertical?

Scott.

In the amp I used for an example, the NCL 2000, the tube compliment is ceramic. Most ceramics don't like grid current because the grids are physically very weak structures. I understand the grid's impedance change from non-conducting to conducting but in this case none is meant to be drawn. If I'm remembering the amp correctly, there's also a resistive divider in the grid bias circuit to keep the grid impedance change down to a small percentage should the grid ever begin to draw current. The divider network was there more as a protection device for the grids during momentary excursions into grid conduction. Any flagrant prolonged excursions into this region usually destroyed the tubes.

> This drastic and abrupt impedance variation demands an
input tank with high-Q and low
> impedance (impedance must be very low because it cannot be
matched).

As I said, there shoudn't be any wild fluctuations because the tubes are not meant to draw any grid current. I also ask what values of impedance and Q are you describing here?

Snipped........

> The exciter must be loaded regardless.

And thats what the attenuator did. It provided a 50 ohm load to the exciter under virtually all amplifier tuning condtions.

> A good amp will have it's own driver, and a good push-pull
may use the driver as a phase-splitter as
> well. Neutralization is used to prevent oscillation both
in the final and the driver. This permits the proper use of
a tuned input > (and output) circuit.

In presenting my defense of grid driving a tube without a
tuned input, I was trying to stick with a simple, single
stage amp with paralelled tubes.
Neutralization is always used in a tube amp but doesn't
gaurantee that a tuned input can or needs to be used.
There's other factors involved.

I dont know how to resond to this. I confess it confused me.
First it's hi impedance then it's low impedance. Can you
rewrite this one differently for me. I'm just not getting
the point to this paragraph..sorry, not being a smart
ass..just trying to understand.

Hi Scott,

What size? Depends on other considerations - mine certainly differ
from yours. The point of the matter is to not let the tree overgrow
the points you may want to service. In the begining there was as much
bolt into the tree as was exposed - that improves (or suffers,
depending on the point of view) as each day passes.

As for my considerations, the upper bolt was actually a pad-eye to
allow me to mount pulleys flag pole style (its cousin resides at the
bottom about waist high). As you can see, this attends nothing of
your needs except by example. I used standard boat cleats to tie down
the rope excess that runs up the tree, as per destiny, those cleats
are becoming nigh on useless as the bark envelopes them. I manage
valiantly in the face of impending doom (in other words, an example of
what I call denial elsewhere in this group).

You need only anticipate where the tree is going (growing) and
accommodate well into the future. This means that strapping is a
losing proposition for both you and the tree, but you will have to
consider the mechanical issues of your monopole. This shouldn't be
treated as a considerable issue, it is the same at any height (what
would you do if you were simply mounting to a 5 foot fence post?).

The four inch exposure does raise some problems of leverage and
twisting in the wind. For this you may want to bolt up to a simple
4X4 and improvise the 4 inch standoffs to this so that you are not
forced into the mechanics of the bracket offered by the antenna
vendor. Another angle would be to install it with a braced yard-arm.
You may even want to consider using those extra trunks to cross brace.
Invention is a mother.... (feel free to fill in with the appropriate
or corrupted adage).

2770. How to locate a CB user in the Toronto Ontario Area? Please help!

Newsgroup: rec.radio.cb
Date: 2002-04-30 07:43:21 UTC
From: dreambeliever99@hotmail.com
Message-ID: <a310f058.0204292343.7ff44b1d@posting.google.com>
Source record: 122634

Hi everyone!! I don't know if this is the proper place to post a question like this BUT... I was hoping that someone could help me out here or at least steer me in the right direction. I am trying to locate an old friend (for my aunt) that she had met from a cb radio about 15 years ago. They have since lost contact, and she trying desperatly to relocate him. Does anyone know if there is such a site that keeps track of cb owners/users perhaps that is listed by the users "handle"?? She knows that he is in Toronto Ontario Canada and that his handle is/was "Hot Chocolate" he is approx. 55 years old originally from Jamaica she also knows his full name, but I don't know if that is approiate for me to post on here.. Thank you for ANY help as I don't really know much of anything about CB's or how people keep track of each other.

If you have his name, search the internet directories for greater Toronto
and see what comes up.

I found this on r.r.a.a and found this to be very interesting...and enlightening. So I wanted to share it with you guys. Please forgive me if you've seen it posted here already. Take care all.

http://www.qsl.net/kg6aoh/a99/

73 de Bert
WA2SI

P.S. I used an Antron 99 in the early 90's and it performed well for a quick and easy antenna.

"Dave Hall" wrote:
>"Good DX" is a subjective term. I don't consider it good DX if I have to compete with Kilowatt stations to work stateside. To me, "good" DX is working South America with 25 watts.<<

Yup, "good' is an adjective. I should have been more explicit and said "polite".
In that mindset, "good" DX to me is barefoot worldwide.

>On the legal 40, with S meter levels rarely dropping below S9 during the day, it is impossible to hear anything above the clatter of the power stations. I am not making this up.
Is it true<<

just because you say it is?

Most of us don't share your "issues"..such as your venom for cbers.

>I have no "venom" for CBers. Only for those selfish, inconsiderate idiots that were never taught what it means to share with other people.<<

You erroneously labeled, falsely accused and lumped people in this category based merely on their feelings and input toward cb, amps and the laws, not their actions. You have indeed showed "venom" in several of your posts toward those that do not believe the way you do.

>Look at this another way. Propagation is not channel specific. Why then is the average noise level on freeband channels so much lower than the legal 40? It's lower becasue there are not as many stations competing for the same bandwidth,<<

Take away your term "channel specific" and your argument crumbles. Amps are not inherent to DX, and propagation is not inherent to amps, but has a direct link with channel (freq) allocation.
    It can not stand on it's own, therefore is discredited.

>What? You're starting to go "twisted" again.
Your statement makes no sense. Please don't try to assemble logic, you're not very good at it.<<

A very familiar trait to the kennel club...."If I can't understand it, it doesnt make sense", goes along with "If I can't work it, it's broke."
Just because a minority of insultive posters, such as yourself, fail to grasp something, does not mean the contigency of the group shares your incapability of comprehension.

>You have not discredited my statement, simply because you missed the whole point.<<

Your stateent fell flat on it's own, I just pointed it out. Maybe if you articulated a bit better what it is you are trying to convey, any "point" you are trying to make may come across as semi-lucid instead of contrived.

>And that point is again, in simpler terms that you'll hopefully understand this time, is that there is no difference in the degree of propagation between 27.025 and 26.005, they both have the same "skip" potential.<<

Yes, agreed, but that is far from your original claim that propagation is NOT channel specific, which it is. Your quick back-pedal reveals you are aware of your gaffe, and an attempt to clarify your mistake by now inserting and comparing freeband and 11 meter is NOT what you originally said. You simply claimed propagation is NOT channel specific, when it certainly is. Adding and comparing two bands located next to each other several days after your error is good enough for me....you realize you were wrong whether you admit or not.

>Yet on 27.025 I get solid S9 and above noise, while on 26.005, the meter sits at S1 to S2 until a station decides to come in. The difference? Less people, and less people running power. On which frequency would you best be able to work a REAL DX station (real DX is not another state)?<<

It isn't? And just how did you arrive at this interpretation?

>Which frequency would you be better off trying to have a local roundtable with stations 10 miles away?<<

You always quote the exception rather than the rule to lend some credibility to your flawed arguments. 6 is not indicative of any other channel, so your question is one of non-relevance.

>Conclusion: The sunspots are not creating the noise level, the people using the channels are.<<

Oh, so when the sunspot activity is gone, the people will disappear all at the same time because they all put their radios away on the same day? Don't think so.

>The more people that there are, the more noise.<<

If there were no long distance propagation, it doesnt matter if there are a million people on the channel, you won't hear them.

>The more power those people use, then even more noise.
and therefore huge amounts of power aren't required.<<

They're not required at all for DX. Point?

>Power should not be required if the frequency that you use is fairly quiet.<<

Agreed, but you were using 6 as your example.

>Working DX on the freeband can be done with 10 watts. Try that on the legal 40, and you'll be hoarse before you've made any contacts<<

Um, here you are incorrect, again. Like Tim, I have well over 100 countries in my log, and in the last year, I have 53 of those barefoot. Not a real incredible feat, and I mention it only to illustrate your incorrect assumptions.

>Your 10 watts will be buried in the static created from all the power stations.<<

No one ever taught you about location, location, location. You forget my location...salt water, salt water, and more salt water at my front door.....talking on the boat with an Antron at 12 watts SSB gets me worldwide more often than not. Double that gets me on the bowl (only from the water) and I have even talked barefoot there a few times. Let's see...it was only a few weeks ago I hit Mr. Blue way down under on AM........

>If you and another person are seated at opposite ends in a large room, you can have a conversation, without really raising your voice. Now put about 100 people into the same room, all jabbering among themselves, and try to have that same conversation. Do you think it will be just as easy? Now put in a rock band with large amplifiers. Can you still have that conversation? The room(propagation) is still the same, but the ambient noise (Users of the frequency) have increased to the point that you ca no longer override the background noise.<<

Analogies never were your strong point.

>The bottom line is that people using amps are a major contributing factor to the high average noise level on the legal 40 during peak skip cycles.<<

But going by your logic, they would be a contributing factor without the skip cycle as well and it just isn't true.

Mother nature is adjusting her power levels as we speak.

>Thank God! Now the band might become habitable again.
Dave
"Sandbagger"<<

With all your frequencies, it's hard to imagine why a hammie overly concerns himself with 40 measly channels of another service that he considers inhabitable when there are many freqencies in his own service that need cleansed, unless underhanded motives are considered.

Source record: 122646

Please note that the start dates for each cycle is calculated using the 13-month smoothed monthly mean sunspot number. One advantage of using this statistical (numerical) approach is that the start month of a solar cycle is the same as the month of the solar minimum. It is possible to use other criteria to separate solar minimum and the start of a solar sunspot cycle, however, which criteria to use and how much importance each is given, unfortunately leaves room for individual opinion.[

>How's that for a disclaimer?
I don't deal in other's interpretations...there is only ONE source, the Royal Observatory of Belgium. There info is a bit different than yours, I choose to believe them, since they ARE the official sunspot record keeper for the world. They don't deal in interpretations when putting out their info....just facts, not stats that can be manipulated. Using your type approach to the information concerning "mean" spots, I see where you can be easily mislead.

2786. FS: BIRD METER SLUGS & METERS

Newsgroup: rec.radio.cb
Date: 2002-04-30 16:44:45 UTC
From: The Tube Man <thetubeman@earthlink.net>
Message-ID: <1Szz8.2513$sR6.177988@newsread2.prod.itd.earthlink.net>
Source record: 122649

I have the following slugs, in stock, for the Bird and Coaxial Dynamic Watt Meters - all are 2-30 Mhz and are new:

250 watt - $ 90
500 watt - $ 90
5000 watt- $150
10000 watt- $160
25000 watt- $170

1000 watt used - $60

+ $5 shipping
+$6 COD

METERS
Coaxial Dynamics watt meter
Reads the same as a Bird 43 meter (Bird watts) as well as it will read PEP (swing watts), with the flick of a switch

Actual meter face is larger than the Bird Meter and therfore easlier to read.

A Bird Meter with the swing kit would cost over $500, I can sell this meter to you for $395, and comes with a 2 year warranty.

Please Email you inquiries

Nicely written article. Of particular note was the
unsoldered mechanical connection of the coax's inner
conductor to the loading coil. If this is typical
construction and not just a mistake in this one antenna, you
now know why it's called a splatter stick. I'll bet as soon
as this connection tarnishes in the least or in some way
loosens, you have major arcing. The arcing will produce
great amounts of interference.

Thanks to the author and to the person who discovered it and
posted here.

2788. Re: How to locate a CB user in the Toronto Ontario Area? Please help!

Thank you to everyone that replied. Like I said I don't really know
too much about cb radios or how you all keep track of each other. I
thought that perhaps "Hot Chocolate" from Toronto might have browsed
this board, I know it was kind of a long shot, but stranger things
have happened. I see that someone there says he IS "Hot Chocolate".
So now sir, my question to you is.... how do I know if indeed you are
THE "Hot Chocolate" that my Aunt is looking for? Could you perhaps
email some information about yourself? My email address is
dreambeliever99@hotmail.com. Thank you again to everyone for your
time and help, it is greatly appreciated! Bye for now and you all
have a great week!!
Smiles
~*Mandy*~

Thanks,

Also of particular interest is the 'IMAX 2000 EXPOSED!' link at the
bottom of the article. I read it with great interest and kinda regret
giving mine away without really giving it a try on 10-meters. It seems
that the poor soldering is not present on the IMAX 2000 and it's
overall design is much better. Here's the direct link.

Good article.
This gave me some insight on the antennas. I would like to find a good base without the small coil in the base. Looks like a week spot for power. I know Its not a full size base antenna but , the old Astro Plane
worked great and had NO base loading coil. I still might break down and get the IMAX 2000 as I need a good base.
Thanks again for the work on the antenna articles.

MANDY: Hi everyone!! I don't know if this is the proper place to post a question like this BUT... I was hoping that someone could help me out
here or at least steer me in the right direction.

LANDSHARK: Well hello there, gorgeous. Are you ALL woman? Or are ya packin somethin extra?

MOPARHOLIC: (shoves Landshark aside) Pay no attention to him, he's not right in the head. Hello there, baby. Allow me to introduce myself. I'm a guy who cuts lawns for a living. So, how about lunch at McDonalds?

MANDY: I am trying to locate an old friend (for my aunt) that she had met from a cb radio about 15 years ago. They have since lost contact, and she trying desperately to relocate him.

PROFESSOR: They lost contact? Well then, they need an AMP. An AMP would solve their problems. And I just happen to manufacture and sell one...

MANDY: Does anyone know if there is such a site that keeps track of cb owners/users perhaps that is listed by the users "handle"?? She knows that he is in Toronto Ontario Canada and that his handle is/was "Hot Chocolate" he is approx. 55 years old originally from Jamaica she also knows his full name, but I don't know if that is approiate for me to post on here.

SD JONES: Mandy, I am your hot chocolate, the name is 'Chocolate Jay', aka Special Delivery Jones, and I shore do got me a special delivery fo' you.

MANDY: Thank you for ANY help as I don't really know much of anything about CB's or how people keep track of each other.

TWISTEDHED: The saucer men keep track of us with their S-meters...they watch for the swing...the swing is how we signal to them!

JAY IN MOJAVE: Baby, don't leave yet, ah'd lak ta sing ya a ole time Barry Manilow song...(grabs Karaoke mike and SINGS) "OHH MANDY, WELL YA CAME AND YA GAVE WITHOUT THINKIN, AND WE TURNED YA AWAY, OHH MANDY..."

How does the new Cobra CBs with the backlighting match up today from their older cousins. I would guess that they are from China but what is not anymore.
I am interested in the 29 and the 148 AM/SSB series, and how has the mods worked out for them.
Thanks.

well bert for such as it is,.....all i can tell you that in the
real world these things don't do too badly.....needless to say,
everyone has already heard that it is nothing more than a piece of
wire enclosed in fiberglass.....i used to know a guy that lived about
50 miles from me and he ran a few hundred watts on one of these
things, played music, acted silly, and was a general nuisance and he
got out all over.....he sounded loud and proud and i frankly was
amused when he told me all he had was a antron 99 in a pine
tree.....so cheaply made and cheaply sold.... unfortunately old
sdj graduated above the 4000 watt threshold a long time ago and i
never looked back.....sdj is down.....

>because the grids are physically very weak structures.

Some do, some don't. Either way, not all tubes are linear below the grid current cutoff point. Also, the curve becomes less linear as the bias approaches cutoff, even if the tube has a sharp cutoff. As the signal to the grid is attenuated, more of the signal lands in this non-linear area near cutoff. If the bias is above cutoff and the signal is attenuated further, all kinds of interesting things could happen, even non-linear Class A operation.

Another thing to think about is if the grid supply isn't well regulated. If grid takes an occasional trip into conduction, or isn't prevented from doing so, then what's going to happen is that the bias is going to fluctuate according to the signal strength. This could easily account for huge modulation ratios.

And I'm sure there are many other ways to achieve "swang"...

>this region usually destroyed the tubes.

If the grid isn't drawing current then the impedance obviously stays high (except for shunting due to internal grid capacitance, which is usually small for HF amps and not relavent to this discussion). If the grid is not supposed to draw current then a limiter should be used to prevent that from happening. This can be a zener, a regulator tube, or even just a diode. Preventing grid current is much easier than dealing with the consequences of occasional trips into the positive.

Fair enough. But if the tubes are going to draw grid current at any
time the amp should really be designed with a dedicated driver.

>Neutralization is always used in a tube amp but doesn't
>gaurantee that a tuned input can or needs to be used.
>There's other factors involved.

Neutralization is -not- always used in a tube amp. Many of the cheap
sweep-tube amps have no neutralization, not because they don't need it
(which they do because they are very non-linear, and can oscillate
themselves into a cloud of vapor if something goes wrong), but because
the wattmeter needle slams harder without it. A well-designed amp will
have some provision for neutralization whether it's needed or not
simply because it improves linearity.

>the point to this paragraph..sorry, not being a smart
>ass..just trying to understand.

Here's what happens during a cycle in an AB2 amp: When the signal is at ground potential the grid is negative at bias. As the signal voltage goes positive, the grid is made less negative until it reaches cathode potential. All is fine up until this point -- your attenuator is loading the exciter, and no current is flowing out of the grid. But as the grid is pulled above cathode potential, grid current abruptly begins to flow. This has the effect of making an additional load on the exciter in parallel with the attenuator, and in no time at all the impedance drops. The result is that the part of the sine when the grid is above cathode potential is attenuated -more- than the part below, and what comes out the other side is a sine wave having a stunted top and sharp corners: in other words, you distort your signal and create harmonics.

When the amp is designed to allow grid current, the source impedance -must- be magnitudes lower than the grid's load impedance at all times. Basically, you need to control the grid with "brute force" so that any variation in the grid's impedance is insignificant. You could think of it as an input filter, but no matter how you look at it, about the only way to do it is with a tuned circuit, the higher the Q the better. I wouldn't design an AB2 input tank with a Q less than 5, and 15 is much better. BTW, a tuned input circuit will also present a constant load to the driver and/or exciter, which certainly doesn't hurt anything. Also, because current only flows one way through the grid, the bias supply must be rock solid as well; i.e, regulated and very low impedance.

If the amp is designed so the grid stays negative then there is no need for all that, and just about any impedance scheme can be used

provided it's not so high as to allow oscillation. In fact, AB1 really doesn't need to be tuned except to filter noise from the signal source. But the grid -must- be prevented from drawing current.

Hey Moparholic,

Truth be told, amps just don't do it for me. There is a company called QRO Technologies though that specializes in helping you support the local power authority. I keep it around 85 watts or so. If that doesn't do it, we don't talk. Plain and simple. Thinking about a solid state one for the mobile though...not sure yet.

I have a FEW Shaft type stereos left from the past, one Jensen in particular. What is the amount in inches from the shaft holes--center to center? I remember I put a stereo in my Mom's 66 Belv. in '73, and I think I remember cutting the dash plastic to put it in. But I'm not sure since it was 29 years ago! I can bring some to our BIG CB NG BASH on the 10th. Call me this weekend and I'll measure the Jensen. Just 10 watts or so--will be enough for an OLD Chrysler Hippy!
Dave!!!!!!!!!!!!

> >
> > You are correct, it is a democracy. It's a country where the

NO, it is suppose to be a CONSTITUTIONAL REPUBLIC which mean that (LAW
rules), as opposed to a Democracy (MAN RULES). I believe that Jefferson
said that a DEMOCRACY is the VILEST form of government, because it ALWAYS
ends in TYRANNY (witness the creation of big brother "homeland security).

> government is comprised of representatives of the people. Even YOU
> have a say in how the government works, and all you have to do is

Actually is this Soviet Repullic "democracy" that we have, the PEOPLE
have NO will OR voice in the govt. at all! What about those people in Mo.
years ago that were FORCED to raise their property taxes because the Federal
god wanted the $$$ to fund their UnConstitutional dictates? And since 1913,
we don't control our money system any more (The economy). Foreign bankers
do that! So IF the people want to change what the Federal god wants, we
lose! Foreigners control the Federal Govt. (Deut. 28).

> speak up. But you, Dave, would rather push your whacked-out beliefs
> onto the majority when the majority has already spoken. And guess

What have "they" spoken? Or are you talking about your liberal buddies?!

> what, Dave: the majority HAS spoken, and doesn't give a shit about
> what you think, because if they did then this country would be far
> more to your liking and you wouldn't be complaining about it! Does

That's right--we would HAVE our country back! But since things are in
the MESS they are in (because of YOU liberals, for the most part), I believe
it is called "redress of Grievances." In OUR Constitutional Republic, the
LAW determines what is right; NOT the "majority."

> that give you a clue?

Something that YOU ain't got, even in the CB world! Picking on
someone 42 years in the CB business! SHAME on YOU!

>

Keith I agree 100% alot of keyclowns don't work.

> Oh and I have been using usenet and the other boards for years, never
> on any FAQ regarding proper posting rules have I seen it stated that
> the OT goes in any particular manner. Having been owner of an ISP, I
> do have some knowledge on the matter.

Keith, the OT better known as a "tag" goes in the beginning to tell
prospective readers that the subject is indeed off topic. Moped usually
like's to point out these type of mistakes to others so I remind him when he
makes them

============
"the poster should include "OT" at the beginning of the subject line, so
that recipients who do not have the time or interest in reading the message
will be able to identify and skip it. "
=============

"Some people find it helpful to use what are known as "tags" to make it
easier for readers to find certain kinds of posts in which they are either
specially interested, or which they want to avoid. These tags are inserted
at the beginning of a subject line and are usually enclosed in or [these].
The most commonly used ones are:
WR: Writing related
OT: Off topic
URL: A useful Web link
MWV: MiscWritingVille

> 73 de Keith
> KC8TCQ
> Vice President: REACT of Henry County

Yep, the Uniden Grant (IF you can find one) IS the same thing as the old 148, made in the same country that USE TO make the 148's.
UNIDEN is NOT made in China CB's. BIG difference in quality. DO NOT BUY ANY new Cobras--ALL are junk and most made in China.
Dave!!!!!!!!!!!!!!!

I'd say you're right Mopar. I would
think it's better to cut lawns than clean drool
from cops off of radar guns. It is about par
for the course for Aaron to turn something
like this into his own little fantasy world dream.

I don't understand all the hostility in this NG.

This thread started out with a simple question.. sure it was OT but so what?

And lets say Moparholic does indeed cut grass for a living.... is that our
business? ... even more OT of a discussion wouldn't you say?

Also if he does cut grass for a living he's making an honest living what is
so bad about that?
There's a killing to be made in the landscaping business.... but hell even
if he made $5/hr flipping burgers does that matter?

I see this BS from a select few on here all the time and just figured i'd
voice my opinion this time.

I'm sorry I asked, no reason to disrespect! "Never look down on anybody unless you're helping him/her up." (Jesse Jackson) I tried to ask a polite question to all of you and I made it very clear that all of you know a lot more then me about this subject. But if you came out looking like the better person by being ignorant..... then more power to you!

Thank you to those who gave alternative suggestions

LANDSHARK: Well hello there, gorgeous. Are you ALL woman? Or are ya packin something extra?

100% woman & proudly more then you could ever handle

SD JONES: Mandy, I am your hot chocolate, the name is 'Chocolate Jay', aka Special Delivery Jones, and I shore do got me a special delivery fo' you.

Thanks but ummm no thanks there "Jay" I have my own "hot chocolate" (Jai is his name oddly enough) not to mention his nightly deliveries are more then one girl could ask for!

TWISTEDHED: The saucer men keep track of us with their S-meters...they watch for the swing...the swing is how we signal to them!

I'll keep that in mind... Perhaps I'll go directly to the saucer men for my answers next time.

JAY IN MOJAVE: Baby, don't leave yet, ah'd lak ta sing ya a ole time Barry Manilow song...(grabs Karaoke mike and SINGS) "OHH MANDY, WELL YA CAME AND YA GAVE WITHOUT THINKIN, AND WE TURNED YA AWAY, OHH MANDY..."

Gee, you shouldn't have! Could you be any more original??

Just to reiterate... thanks again to the people that took the time to politely answer my question, it was appreciated!

The words you speak today should be soft and tender ... for tomorrow you may have to eat them.

~*Mandy*~

Jason,
Don't attempt to apply some reason here... there are many that take pride in "bashing" others here. Think of it as "venting" therapy for them. This group has turned into nothing but a case study for anger management.

Mopar:
I'll bring you a Hemmings book when we meet. In it there are places that put a stereo in a stock liiking radio for the car. This is an option to go IF my stereos don't fit or if you don't want to cut da plastic dash to get it in, since it is a wierd opening, unlike GM or Ford @ the time, even though Ford had some goofy radio openings back then too I remember.
Dave!!!!!!!!!!!!!!!

> In that mindset, "good" DX to me is barefoot worldwide.

I would agree, and that is precisely my beef. You CAN'T work barefoot worldwide on the legal 40 due to competition from all the users running large amps. It's much easier on the freeband, where it isn't as much of a circus.

> >On the legal 40, with S meter levels rarely dropping below S9 during

I "labeled" selfish, inconsiderate idiots as exactly what they are. Their actions affirm it. I did not name any specific person or persons who post here. Chances are the "idiots" that make my CB experience less than ideal, are not even on the internet.

But the "label" is still accurate, no matter how many ways you attempt to spin and justify it.

What you fail to recognize is that you have a difficult time expressing
your points in a succinct and eloquent manner. You may understand what
you are thinking, but you cannot translate your thoughts accurately to
words, and you attibute this to others' lack of comprehension.

> >You have not discredited my statement, simply because you missed the
> whole point.<<

You also have a problem translating other people's words into your
thoughts.

>
> >And that point is again, in simpler terms that you'll hopefully

No, it's not.

> Your quick back-pedal reveals you
> are aware of your gaffe, and an attempt to clarify your mistake by now
> inserting and comparing freeband and 11 meter is NOT what you originally
> said.

Yes, it is, and it seems that you are the only one who didn't "get it",
the first time, until I simplified my explaination. And BTW, 11 meters

includes the freeband.

> You simply claimed propagation is NOT channel specific, when it
> certainly is. Adding and comparing two bands located next to each other
> several days after your error is good enough for me....you realize you
> were wrong whether you admit or not.

What do you consider a "channel"? In the context of this discussion, a
"channel" is a 10 Khz wide chunk of RF that is associated with the CB
band, I.E. channels 1 to 40.
Anything broader than that or in another radio service would not be
refered to as a "channel".

> >Yet on 27.025 I get solid S9 and above noise, while on 26.005, the
> meter sits at S1 to S2 until a station decides to come in. The
> difference? Less people, and less people running power. On which
> frequency would you best be able to work a REAL DX station (real DX is
> not another state)?<<
>
> It isn't? And just how did you arrive at this interpretation?

Ask any hard core, serious DXer whether they consider stateside to be
"DX". Unless you're talking about Hawaii, it's no great accomplishment
to work the "lower 48". Unless, of course, you're talking about VHF and
UHF. Then, by virtue of the frequency bands (Note that I did not use the
term "channel"), involved, stateside would be legitimate DX.

>
> >Which frequency would you be better off trying to have a local
> roundtable with stations 10 miles away?<<
>
> You always quote the exception rather than the rule to lend some
> credibility to your flawed arguments. 6 is not indicative of any other
> channel, so your question is one of non-relevance.

Channel 6 may be the worst case, but it is hardly the exception.

> >Conclusion: The sunspots are not creating the noise level, the people
> using the channels are.<<
>
> Oh, so when the sunspot activity is gone, the people will disappear all
> at the same time because they all put their radios away on the same day?
> Don't think so.

No, once again you are confusing a "conductor" with a "signal source".
The sunspot propagation is nothing more than a conductor of long
distance radio waves. If the DX were running, and there was no one
transmitting, you'd never know it because the QRN would not be
significantly more than during the low sunspot point.
Put many stations on, and that conductor will carry them all over the
globe. Increase the signal, by increasing the power, and the level of
the signal will be greater. Combine all the stations together and you
get what is commonly refered to as "hetrodyning", which is what the

noise level is all about.

You can cut the conductor, or you can cut the signal source. Both would have the same overall effect. But the conductor is not the source of the noise, the people hetrodyning are.

> >The more people that there are, the more noise.<<
>
> If there were no long distance propagation, it doesnt matter if there
> are a million people on the channel, you won't hear them.

True, and if there were no people transmitting, when the skip was rolling, my radio receiver would not act any differently.

> >The more power those people use, then even more noise.
> and therefore huge amounts of power aren't required.<<
>

How many of those contacts were had on the legal 40? I can never hear any foreign countries on the legal 40, over Billy-Bob and his "barn-burner 2000", "waving his hands and putting his knees in the breeze".

> >Your 10 watts will be buried in the static created from all the power

I seriously doubt that your groundplane, as good as it is, is enough to put your barefoot signal on the same level as the multi-kilowatt stations on the "toilet bowl".

> >If you and another person are seated at opposite ends in a large room,

Comprehending them was never yours.

> >The bottom line is that people using amps are a major contributing
> factor to the high average noise level on the legal 40 during peak skip
> cycles.<<
>
> But going by your logic, they would be a contributing factor without the
> skip cycle as well and it just isn't true.

They are to the locals in the relative area. But once again, you do not
understand the effects of propagation as a conductor. A conductor that
is not selective to what it propagates to the corners of the globe.

> Mother nature is adjusting her power levels as we speak.
>
> >Thank God! Now the band might become habitable again.
>
> With all your frequencies, it's hard to imagine why a hammie overly

> that need cleansed, unless underhanded motives are considered.

Once again, you fail to comprehend. Just because I have a ham license,
doesn't mean that I can't enjoy CB. I was a CBer long before I was a
ham, and I still have many fond memories of CB and the people that made
it fun. I long for a return to more civilized CBing, where people can
have some good natured fun without having to deal with mentally and
socially challenged idiots. To that end, I will continue to influence
what small area that I have to achieve that goal.

What disclaimer? It is merely conveying the method used for aligning the data so that realistic comparisons could be made. There were no differences in the way the data was handled during each cycle. The data is still valid for caomparison purposes.

> I don't deal in other's interpretations...there is only ONE source, the

Typical. I figured you'd try to weasel out, once presented with the facts.

You can argue that you aren't comfortable with the way the data is presented, but the data itself is still accurate, and still shows that cycle 23 is not as strong as cycle 22 or 21, which blows a huge hole in your assumption that the sunspots are the sole reason that the noise level is higher in this cycle.

I could post a dozen more links that show pretty much the same thing, but I won't bother since you'll find another way to make an excuse why we shouldn't believe it.

Like they say "none are so blind as those that refuse to see...."

Twistedhed wrote:
"Dave Hall" wrote:
In that mindset, "good" DX to me is barefoot worldwide.

>I would agree, and that is precisely my beef. You CAN'T work barefoot worldwide on the legal 40 due to competition from all the users running large amps<<

You have several beefs and have stated as much. I work the world barefoot on a regular basis, don't tell me I can't do it.

>. It's much easier on the freeband, where it isn't as much of a circus.<<

Well, sure it is, but it has nothing to do with anything.

>On the legal 40, with S meter levels rarely dropping below S9 during the day, it is impossible to hear anything above the clatter of the power stations. I am not making this up.<<

>>Is it true just because you say it is?<<

>Yes. <<

Um, I see the thread has you confused...who are you responding to? I didn't make that last comment.

Most of us don't share your "issues"..such as your venom for cbers.

>I have no "venom" for CBers. Only for those selfish, inconsiderate idiots that were never taught what it means to share with other people.<<

You erroneously labeled, falsely accused and lumped people in this category based merely on their feelings and input toward cb, amps and the laws, not their actions. You have indeed showed "venom" in several of your posts toward those that do not believe the way you do.

>I "labeled" selfish, inconsiderate idiots as exactly what they are. Their actions affirm it.<<

What actions? The only "action" here are words and you have brilliantly shared your intolerance for those who do not believe as you feel they should. No, you based several of your attacks on words, not actions.

>I did not name any specific person or persons who post here.<<

But you did. Perhaps memory isn't a strong point of yours.
This is another back-pedal and fallacy...there exist several posts of yours where you expressly call names and accuse posters of being criminals based on their opinions they posted here, nothing more. Then of course, we have your admitted taunting.....

>Chances are the "idiots" that make my CB experience less than ideal, are not even on the internet.But the "label" is still accurate, no matter how many ways you attempt to spin and justify it.<<

You attach a label and look to another to justify it,,,,,,,,you aren't making much sense. No one has justified any of your imbecile-like comments, because it can't be done and no one wishes to be of the ilk that labels another a "criminal" based on their opinions or subject topic in a usenet group..

>Look at this another way. Propagation is not channel specific. Why then is the average noise level on freeband channels so much lower than the legal 40? It's lower becasue there are not as many stations competing for the same bandwidth,<<

Take away your term "channel specific" and your argument crumbles. Amps are not inherent to DX, and propagation is not inherent to amps, but has a direct link with channel (freq) allocation.
It can not stand on it's own, therefore is discredited.

>What? You're starting to go "twisted" again.Your statement makes no sense. Please don't try to assemble logic, you're not very good at it.<<

A very familiar trait to the kennel club...."If I can't understand it, it doesnt make sense", goes along with "If I can't work it, it's broke." Just because a minority of insultive posters, such as yourself, fail to grasp something, does not mean the contigency of the group shares your incapability of comprehension.

>What you fail to recognize (snip)<<

I'm not the one complaining I "can't understand" or accusing others of using words I can't define or claiming something "doesn't make sense".....YOU are.

>is that you have a difficult time expressing your points in a succinct and eloquent manner.<<

Any "difficulty" you may experience resonates from within your own self, evidenced by your toddler-like attention span of about two minutes and eagerness to make a thread personal and insultive. Coupled with your fondness for "taunting" , this illustrates an accurate description of your persona and presenc..

>You may understand what you are thinking, but you cannot translate your thoughts accurately to words, and you attibute this to others' lack of comprehension<<

Only with those such as yourself, who once commented that the big words were too much to follow.

>You have not discredited my statement, simply because you missed the whole point.<<

No one on the group has missed your
troll for anything other than what it is....anything else you wish to share with us due to your inability to control reactions and emotions?

Your stateent fell flat on it's own, I just pointed it out. Maybe if you articulated a bit better what it is you are trying to convey, any "point" you are trying to make may come across as semi-lucid instead of contrived.

>You also have a problem translating other people's words into your thoughts.<<

Other's peoples words don't affect me in the manner they control you.

>And that point is again, in simpler terms that you'll hopefully understand this time, is that there is no difference in the degree of propagation between 27.025 and 26.005, they both have the same "skip" potential.<<

Yes, agreed, but that is far from your original claim that propagation is NOT channel specific, which it is.

>No, it's not.<<

Your quick back-pedal reveals you
are aware of your gaffe, and an attempt to clarify your mistake by now inserting and comparing freeband and 11 meter is NOT what
you originally said.

>Yes, it is, and it seems that you are the only one who didn't "get it", the first time,<<

Probably because I am the only one you directed your tirade to concerning your gaffe..

> until I simplified my explaination. And BTW, 11 meters includes the freeband.<<

Yea, I tend to agree, which is why it's always a valuable topic of discussion here. Explain it to Sparky.

You simply claimed propagation is NOT channel specific, when it certainly is. Adding and comparing two bands located next to each other several days after your error is good enough for me....you realize you were wrong whether you admit or not.

>What do you consider a "channel"?<<

It was your term.

>In the context of this discussion, a "channel" is a 10 Khz wide chunk of RF that is associated with the CB band, I.E. channels 1 to 40.<<

Well, since it was your term you may choose to apply any meaning your black heart desires.

>Anything broader than that or in another radio service would not be refered to as a "channel".Yet on 27.025 I get solid S9 and above noise, while on 26.005, the
meter sits at S1 to S2 until a station decides to come in. The difference? Less people, and less people running power.<<

Less people due to not all cbers having extra "channels" certainly would equate less amp useage. It would also indicate less people on 26.005 own Mercedes Benz' as well,,so what? Your rationale is all fluff and meaningless, propaganda that you can't even serve up properly.

> On which frequency would you best be able to work a REAL DX station (real DX is not another state)?<<

It isn't? And just how did you arrive at this interpretation?

>Ask any hard core, serious DXer whether they consider stateside to be "DX".<<

I'll take that as another concession...going from stating it as fact to quickly clarifying it is your personal opinion is akin to stepping in it and wiping off your shoe in your 2nd floor squalor apartment.

>Unless you're talking about Hawaii, it's no great accomplishment to work the "lower 48".<<

I thought you had a problem with echo.

>Unless, of course, you're talking about VHF and UHF.<<

By your definition of "channels" that you speak of, which are in the VHF and UHF band? Oh never mind, it's your attention span thingy kicking into mode again...

>Then, by virtue of the frequency bands (Note that I did not use the term "channel"), involved, stateside would be legitimate DX. <<

Oh, you mean from your nocode perspective? Well, damn why didn't you say so in the first place instead of reducing yourself to what you have?

>Which frequency would you be better off trying to have a local roundtable with stations 10 miles away?<<

You always quote the exception rather than the rule to lend some credibility to your flawed arguments. 6 is not indicative of any other channel, so your question is one of non-relevance.

>Channel 6 may be the worst case, but it is hardly the exception.<<

But YOU used it in your flawed example, regardless of your personal opinions or emotions of the issue.

>Conclusion: The sunspots are not creating the noise level, the people using the channels are.<<

Oh, so when the sunspot activity is gone, the people will disappear all at the same time because they all put their radios away on the same day? Don't think so.

>No, once again you are confusing a "conductor" with a "signal source".<<

(Yawn) This oughtta be good.....

> The sunspot propagation is nothing more than a conductor of long distance radio waves. If the DX were running, and there was no one transmitting, you'd never know it because the QRN would not be significantly more than during the low sunspot point. Put many stations on, and that conductor will carry them all over the globe. Increase the signal, by increasing the power, and the level of the signal will be greater. Combine all the stations together and you get what is commonly refered to as "hetrodyning", which is what the noise level is all about. You can cut the conductor, or you can cut the signal source. Both would have the same overall effect. But the conductor is not the source of the noise, the people hetrodyning are.<<

Your attempt to apply it in this context is null and amounts to an incomplete fabrication without clarifying the obvious...you have never presented both sides of the story, no matter which name you chose to post under.......the bottom line is,,,if their were no propagation, no good DX conditions, a million people wouldn't be heard no matter what they were running......
Your dwelling too much on your delusion of being employed and it somehow has prevented any clear thinking on your behalf.

>The more people that there are, the more noise.<<

If there were no long distance propagation, it doesnt matter if there are a million people on the channel, you won't hear them.

>True, and if there were no people transmitting, when the skip was rolling, my radio receiver would not act any differently.<<

Right,,,you would hear not a peep.

>The more power those people use, then even more noise.<<

Except during times of zero propagation.

>and therefore huge amounts of power aren't required.<<

They're not required at all for DX. Point?

>Power should not be required if the frequency that you use is fairly quiet.<<

Agreed, but you were using 6 as your example.

>Working DX on the freeband can be done with 10 watts. Try that on the legal 40, and you'll be hoarse before you've made any contacts<<

Um, here you are incorrect, again. Like Tim, I have well over 100 countries in my log, and in the last year, I have 53 of those barefoot. Not a real incredible feat, and I mention it only to illustrate your incorrect assumptions.<<

>How many of those contacts were had on the legal 40?<<

Many. But it only took one to render you incorrect.

> I can never hear any foreign countries on the legal 40<<

Yea, we know....."I can't work it, so it must be broke."

>Your 10 watts will be buried in the static created from all the power stations.<<

No one ever taught you about location, location, location. You forget my location...salt water, salt water, and more salt water at my front door.....talking on the boat with an Antron at 12 watts SSB gets me worldwide more often than not. Double that gets me on the bowl (only from the water) and I have even talked barefoot there a few times. Let's see...it was only a few weeks ago I hit Mr. Blue way down under on AM..... <<

>I seriously doubt that your groundplane, as good as it is, is enough to put your barefoot signal on the same level as the multi-kilowatt stations on the "toilet bowl".<<

And you continue to share your incredible cb wisdom and insight, as always.....

>If you and another person are seated at opposite ends in a large room, you can have a conversation, without really raising your voice. Now put about 100 people into the same room, all jabbering among themselves, and try to have that same conversation. Do you think it will be just as easy? Now put in a rock band with large amplifiers. Can you still have that conversation? The room(propagation) is still the same, but the ambient noise (Users of the frequency) have increased to the point that you ca no longer override the background noise.<<

Analogies never were your strong point.

>Comprehending them was never yours.<<

They have to make sense before they can be comprehended.

>The bottom line is that people using amps are a major contributing factor to the high average noise level on the legal 40 during peak skip cycles.<<

But going by your logic, they would be a contributing factor without the skip cycle as well and it just isn't true.

>They are to the locals in the relative area.<<

But not the reason your meter is "S" 9 in the day time as you come across, as your meter will be quiet when the DX is gone, no matter how many are using amps across the country.
Attention span.....

>But once again, you do not understand the effects of propagation as a conductor.<<

(Yawn)

>A conductor that is not selective to what it propagates to the corners of the globe.<<

Can you tell me one that is, since the attention span thing obvously has you perplexed? That last sentence is incomplete, a blunder committed by yourself and Lelnad when y'all get upset and let your anger do the typing.....

Mother nature is adjusting her power levels as we speak.

>Thank God! Now the band might become habitable again.<<

With all your frequencies, it's hard to imagine why a hammie overly concerns himself with 40 measly channels of another service that he considers inhabitable when there are many freqencies in his own service that need cleansed, unless underhanded motives are considered.

>Once again, you fail to comprehend. Just because I have a ham license, doesn't mean that I can't enjoy CB. I was a CBer long before I was a ham, and I still have many fond memories of CB and the people that made it fun<<

Yea, we know the type, your old war-storied, mongrel tired old ass that has problems adapting to change. Your type romanticizes the past to such a ridiculous point,,,,well beyond what it actually was in an effort to preserve your golden, more happier days, which it is obvious you are well beyond.

>I long for a return to more civilized CBing,<<

Buy a lottery ticket, your odds are better than cb conforming to your standards.

>where people can have some good natured fun without having to deal with mentally and socially challenged idiots.<<

Upgrade and stay off the nocode freqs and you will find less of these you speak of.

>To that end, I will continue to influence what small area that I have to achieve that goal.

I don't understand all the hostility in this NG.
This thread started out with a simple question.. sure it was OT but so what?
And lets say Moparholic does indeed cut grass for a living.... is that our
business? ... even more OT of a discussion wouldn't you say?
Also if he does cut grass for a living he's making an honest living what is so bad about that?
There's a killing to be made in the landscaping business.... but hell even
if he made $5/hr flipping burgers does that matter?
I see this BS from a select few on here all the time and just figured i'd voice my opinion this time.
-Jason<<

Full time lawn services (family operated) where I reside can and do make over 100 G/year. A quarter acre tiny assed yard goes for 80 bucks a month here, cut once a week six months a year, then once a month for six months. That doesn't count any landscaping, trimming of hedges, bushes, trees, fertilizing,,that's all extra. It takes all of 5 or 6 minutes to knock out a yard that size, sometimes less.....do those all day long and then do the math........

No need to "gather troops." Da troops are US & here! Troops R US ! Yo is
da one that only YOU can unite so many people of diverse backgrounds AGAINST
yourself, because you are ANTI-CB ! Why would Nebo allegedly "want your
____ ?" I think he has enough of his own to worry about!!!!!!!!
Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Sorry, it was claimed by my lad's godfather. He runs a TRC-485 that's
been given the Panther Electronics treatment. (But it's still legal.)
He didn't want a large omni. Just something that the tree in his front
yard will hide nicely. Sire it'll take allot of power, but I believe
(finally) that it's just a 1/4-wave ground plane. Hence, isn't most of
that power radiated upward rathet than at the horizon. Heck, if I were
going to pay allot of dinero to push allot of power...why waste it
upward? (Unless it's for SETI. <ggg>) How about a nice cheap home-brew
2 el. Yagi? Later guys. :-)

I posted my opinion. I do not care if you care or not what "I understand"

These posts are in a public newsgroup so it is not a private message... you just wanted a forum to rant so it was my business as much as anybody elses to reply.

I'm not going to bother continueing this... I would just leave you with suggesting you get a more meaningful life rather than attacking someone for an OT and non-offensive post.

Aaron;
What the hells wrong with you? She ask a honest legitimate question. Your turned it into one of your silly say nothing do nothing posts. Pick out people that expect that kind of crap from you, not someone asking for help. Now she thinks everyone here is an ignorant 12 year old like have just proven yourself to be. Grow up.

Ken

I suppose SD Jones reply was a better example of "being helpful"?

> Now she thinks everyone here is an
> ignorant 12 year old

Well she would have found out anyway. All she has to do is read the
archives. SD Jones threatening people, Train saying how he loves to
break laws, Twistedhed raving about shooting college kids. Etc.

Great that makes 2 of us that doesn't care what you understand.

> These posts are in a public newsgroup so it is not a private message...

Wow your smart

> just wanted a forum to rant so it was my business as much as anybody elses
> to reply.

No Ill say it again it is none of your business my comments were directed towards Moped, If you knew anything about this group you will find he is a real hypocrite, he has done the same thing to me , Where were you then to stick up for me, like you are doing for him . So like I said It is none of your business since you don't know the whole story.

> I'm not going to bother continueing this... I would just leave you with
> suggesting you get a more meaningful life rather than attacking someone
for
> an OT and non-offensive post.

I suggest you had better head your own advise since you took the time out of your meaningful life to reply to my "no life Post" Guess that makes your life worse than mine. Next Time speak when spoken to If you don't like what I have to say either just sit there with that stupid look on your face or skip over the post and show us all how much of a life you really have.

Great no one asked you to stick your nose where it didn't belong.

Message-ID: <a310f058.0205011829.5d097343@posting.google.com>
Source record: 122734

Well it's me again, I wasn't going to respon anymore since this all seems silly to me... I only asked a question. In response to "Now she thinks everyone here is an ignorant 12 year old" ... I know there are always idiots that act like "ignorant 12 year oldb"..... I don't believe that they represent everyone that posts in this forum. Thanks for pointing out their stupidity though!! Another reason that I had to post again, was because of an email that I received from one of the other readers. Here is goes...

From: "Dave or Debby"
To: "BigBlondeBeauty"
From truth@planetc.com Tue, 30 Apr 2002 18:56:15 -0700

For what purpose does she want to find him again for?
Dave

My reply They were good friends that dated, but still remained friends after. The problem was that she got married and moved about 20 hours aways. She is since divorced and is moving back the area later in the year. She was just hoping to get in touch with him again, apparently they used to have a lot of fun hanging out together. I don't know much more about the situation, I just turned 25 and this was 15 years ago..... If you have any suggestions I / she would really appreciate it! Thank you for your time and interest, it seems as though most of the people that responded just wanted to be ignorant. Bye for now..... Mandy

From: "Dave or Debby"
To: "~*~ Mandy ~*~"
From truth@planetc.com Wed, 01 May 2002 06:44:30 -0700

Was he a Black Jamacan? Is she white?
Dave

My reply yes dave that is correct.... thank you

From :"Dave or Debby" <truth@planetc.com>
Tell her that interracial marriage is against God's Laws (you go across boundries when you do it). The Rev.2:9 & 3:9 people make people do it to get rid of the Black Man (makes black disappear).
Dave

I don't recall asking for a bible lesson from a person that has his facts ass backwards!

Someday you will come to the realization that there is more than one
person in the world that thinks you're an ass. Until then, you'll
labor under the delusion that everyone who criticizes you is me.

>ends in TYRANNY (witness the creation of big brother "homeland security).

Who makes those laws, Dave? Machines? Farm animals? Your pet rock?
Have you even read any part of the Constitution? In case you ever run
across a copy I'll give you the first three words so you can recognize
the document: "WE THE PEOPLE..."

Maybe you missed a couple... ok, you missed a lot of classes in grade
school. No matter what you call it, this government runs on a system
of "checks and balances". The exectutive and legislative branches are
directly elected by WE THE PEOPLE. The members of the judicial branch
are appointed and approved by the other two branches, so you could say
that WE THE PEOPLE elect them indirectly.

And contrary to what you want to believe, even the Constitution can be
changed by a super-majority of those people elected by WE THE PEOPLE.
In that way the government can be both rigid and flexible.

Wanna know what you can do to change the government, Dave? Vote, and
vote responsibly. Every election day you send a message to the
government. You do this whether you vote or not. You get to choose
between two or more people that best represent your beliefs. Ok, the
choices sometimes aren't the greatest (I think it was Helen Keller who
complained about voting saying something like, "We choose between
Tweedledum and Tweedledee"), but between any two candidates there is
always some distiction. Not voting also sends a message: it says that
you are content with all of the candidates.

There are many other ways to get things going in the right direction.
You can petition for a bill. You can challenge a law in court. You can
work to sway public opinion (btw, logic and reason usually work better
than whining to convince people of something, Dave). You can establish
a political lobby, just like those loathesome hammies! There are lots
of avenues to change.

But I'll bet you that people just aren't ready for your ideas of
government, Dave. Especially when those ideas involve giving up
Consitutional rights. Your ideas are made even more distasteful when
you speak them in the name of freedom, yet mingle them with comments

of racial prejudice and religious intolerance. If there was such a
thing as 'criminal hypocrisy', you would be committing a felony!

And BTW, Jefferson is dead.

>> government is comprised of representatives of the people. Even YOU
>> have a say in how the government works, and all you have to do is
>
>
> Actually is this Soviet Repullic "democracy" that we have, the PEOPLE
>have NO will OR voice in the govt. at all!

Not true, Dave, as I pointed out above. Even YOU have a voice, you
just don't like the fact that your voice isn't the loudest. Instead of
learning how to make your voice louder, you would rather seek false
justifications as to why you feel you are being ignored.

> What about those people in Mo.
>years ago that were FORCED to raise their property taxes because the Federal
>god wanted the $$$ to fund their UnConstitutional dictates? And since 1913,

>lose! Foreigners control the Federal Govt. (Deut. 28).

I agree that the Fed isn't the greatest idea in a free-enterprise
system, but it was created because, after the depression, people were
willing to fork over a bit of freedom in exchange for a little more
security. That can change if people change. Something to work for,
Dave.

As far as taxes are concerned, maybe you should take a lesson from
ex-pres George Sr.

>> speak up. But you, Dave, would rather push your whacked-out beliefs

Dave... I think you'll find the term "vertical" refers to an antenna that is perpendicular to the ground whether it's CB, ham, commercial or what have you. We hams don't have a lock on that term.

Scott... I haven't used CB in AGES, but the old rule --as I remember it-- was that you could mount a CB antenna no more than 20 feet above an existing object. I don't recall if that includes trees, but I don't see why not. Remember, however, that pines can sway side-to-side violently in high winds. If you live in a windy area, that may not be a great choice.

I would think you could use a metal strap like a chimney strap, but the RS chimney strap contains a bracket that stands the antenna off of the chimney by 8 inches or so. I doubt it will hold a fiberglass 24' antenna in anything beyond near perfectly calm conditions.

Good luck... Ed, W5EJ

Define "Same amount of power"? If you mean the legal limit of 4 watts AM
and 12 watts SSB, I would say that it would definitely be EASIER to talk
DX, since the sheer magnitude of the hetrodyne level would be lowered
dramatically, and you'd have a better chance of hearing a really distant
station.
That being said, the freeband would still be a better choice since there
would still be less competition.

Ask yourself this simple question. If amps make no difference in the
"DX-ability" of the Cb band, as some have alleged, then why do people
run them?

You can't touch it, because you were proven wrong. Any further attempt
to spin your way out of it, would be far too obvious.

Go back to raising pigs or cattle or whatever it is you do on that swamp
land you call home, because radio is not something you have even the
slightest grasp, beyond "CB science", and "hack shop theory".

What's to understand? It's simple RF math. If a thousand people, all running 4 watts were all propagating all over the country, would their aggregate hetrodyning signal be greater or less then the same number of people, mostly running hundreds or more watts?

Dave/Debbie hates everybody that's not like him/her/shim/it.

Shim has stated that shim doesn't like:

long-haired hippies
jews
blacks
commies
asians
mexicans
canadians

in short, anyone not a "christian".

What shim fails to realize, is that they pray to Jesus,
a dead jew.

Did I happen to mention that shim would be in the dark
at night if it wasn't for edison (another jew).

I could go on but I have a job.....gotta go!

Excellent post, Frank. However, the statement above does not apply to the FCC. (Nor the IRS.) Sorry, I just had to point that out. The FCC acts as all three branches wrt their rules and regulations. There are no checks and balances in place. Take it easy.

73 de Bert
WA2SI

P.S. While I'm often pleased by the results of FCC enforcement actions, I must admit that I'm less than pleased at the means by which these results are obtained.

I've had a "big stick" in a Maple tree for around 20 years and it's still ticking, as the old Timex ad used to say. The mount is a RS chimney mount, now almost grown over. As I remember, the big stick is about 18' and the whip is willowy enough that wind is not generally a problem. It works on 11 (of course); on ten, with a MFJ random wire tuner and on 6 FM, with an in-line variable cap. Performance on 6 is not all that great but for local repeaters it's enough. The matching on other than 11 meters would depend on the impedance at the radio end of the particular length of the coax.

The Solarcon IMAX 2000 appears to be a clone of the old big stick, (1/2 wave vertical dipole) and should survive tree mounting as well as the original. I'd say, go for it.

Most of which you do on the freeband, which is part of my point.

>
> >. It's much easier on the freeband, where it isn't as much of a
> circus.<<
>
> Well, sure it is, but it has nothing to do with anything.

Pay attention (I know it's difficult for you). Since the freeband has
less people, and the need to run power is less, the level of hetrodyne
is less, therefore your prospects for hearing (Remember, if you can't
hear 'em, you can't work 'em) a DX station are far greater.

> should. No, you based several of your attacks on words, not actions.

Every time I turn on the radio, I am witness to the "actions" of the
people that are currently transmitting. Running excessive power, and not
sharing the frequency with other users is clearly evident.
Pardon me for believing in old fashioned conservative moral values, and
common courtesy. If you oppose these values then YOU are the sociopath.

> >I did not name any specific person or persons who post here.<<
>
> But you did. Perhaps memory isn't a strong point of yours.
> This is another back-pedal and fallacy...there exist several posts of
> yours where you expressly call names and accuse posters of being
> criminals based on their opinions they posted here, nothing more.

Prove it. Find a post where I specifically refered to anyone by name in relation to criminal activity. I may have made comments along the line of "If it walks like a duck, quacks like a duck and swims like a duck, chances are it's a duck" with reference to illegal activity. If you fit the mold, then I'm sorry, but I didn't write the rules. The fact is that if you break the rules, then you are technically a criminal. The fact that you haven't been caught yet should be of little comfort.

> Then of course, we have your admitted taunting.....

Only to you, because you're an idiot. One that I am slowly tiring of.

> >Chances are the "idiots" that make my CB experience less than ideal,

> topic in a usenet group..

You seem to blur the line between opinion and fact quite frequently. Breaking the law makes you a criminal. That is a fact. Trying to convince yourself that you have some god-given right to selectively ignore laws that you personally don't agree with, doesn't change those facts, no matter how long and hard you protest.

> meaningless, propaganda that you can't even serve up properly.

The point, that you continually keep missing, is that if, as you claim, the sunspots were soley responsible for the noise level on the legal 40, and since the effects of the sunspots are not any different on the freeband, then it is on the legal 40, then the noise level should be the same on both. But the fact is that the noise level is significantly less on the freeband. This supports my conjecture that the noise level is propagated by the sunspots, but is created by the volume of people hetrodyning together, and further exacerbated by people running large amounts of power.

> quickly clarifying it is your personal opinion is akin to stepping in it
> and wiping off your shoe in your 2nd floor squalor apartment.

It's pretty much a given among serious ham HF DXers, that stateside contacts are not considered DX. While this is indeed an "opinion", it is one that is shared by a multitude of people that live and breathe for this stuff. I'm surprised that you didn't know this, as much as you want to be a ham, even if you can't master the simple tests.

>

> into mode again...

We don't refer to the VHF and UHF bands as channels. That is a fallacy on your part.

>
> >Then, by virtue of the frequency bands (Note that I did not use the
> term "channel"), involved, stateside would be legitimate DX. <<
>

> Oh, you mean from your nocode perspective? Well, damn why didn't you say
> so in the first place instead of reducing yourself to what you have?

Pay attention. I passed my first ham test in 1981. There wasn't a
no-code license then. I personally prefer bands above 50 Mhz simply
because I prefer local rag chewing to DX chasing. Since propagation is
much less frequent on VHF and UHF, when it does occur, it provides a
nice temporary (key word temporary) diversion from the norm. But it
doesn't hang in there for long thankfully.

>
> >Which frequency would you be better off trying to have a local

The only thing that's obvious is that I'm attempting to educate someone
that refuses to see the forest for the trees.

> ..you have never presented both sides of the story,

Both sides of what story? What the hell are you babbling about now?

> no matter which name you chose to post under.

Now who's making wild accusations?

.....the bottom line is,,,if their were no propagation, no
> good DX conditions, a million people wouldn't be heard no matter what
> they were running.....

True. But if there were no people transmitting, no matter how strong the
sunspots, the ambient noise level on any given (CB) channel would be
low.

> Your dwelling too much on your delusion of being employed and it somehow
> has prevented any clear thinking on your behalf.

Another wild accusation? You just love to engage in the same behavioral
traits that you accuse me of. There's a word for that; Hypocrite.

>
> >The more people that there are, the more noise.<<
>
> If there were no long distance propagation, it doesnt matter if there

> well beyond.

That may very well be true, but that doesn't change the fact that the CB band has degenerated significantly in the last 20 years.

>
> >I long for a return to more civilized CBing,<<
>
> Buy a lottery ticket, your odds are better than cb conforming to your

At some point, society will rise up against people like you who abandon traditional values, and continually flaunt your "I can do what I want, and screw everyone else" attitude. Hopefully this will happen soon.

>
> >where people can have some good natured fun without having to deal with

>
> Upgrade and stay off the nocode freqs and you will find less of these
> you speak of.

The ones that I speak of are typically on CB and the lower HF ham bands. The VHF and higher bands are where the decent people hide out.

I used one in Newport RI. The bracket was attached to a fence post and I had two 10' poles attached to the mount for a total of 20' to the bottom of the antenna. The antenna on top was an Imax 2000 (24' tall). It stood up to the ocean "breezes" just fine.

Actually, if you look into it, you'll see that the Imax 2000 is actually a .64 wave (slightly more than a 5/8 wave)! Excellent antenna. Outperforms most verticals out there on CB.

Whatever happened to Joe Outlaw from Glasgow who was a regular on cb channel 19 a few years ago. He used to have a very strong signal and called everybody a bunch of "junkie b*******", he was an alcoholic as well. He was a funny guy. He just seemed to disappear overnight. If anybody remembers him or knows him please respond on this group.

Thanks again.

Randy Just keep kill filing him.
You'll be a lot better off without seeing the crap
he spews. Also make sure that each time he
changes a screen nic save it and send it to
abuse@comcast.com and complain on how
this person is posting off topic, obscene language,
harassing and best of all, purposely attempting to
by pass newsreader filters by changing his screen
nic. If enough people continue to complain, he'll
either tone it down or get his access removed, so
please if you offended by this person below in
my sig file, please make sure you send the entire
post including headers to abuse@comcast Make
sure you tell them how you are continually having
to put him into a kill file and how it is hampering your
ability to enjoy the internet because you are having to
do this daily just because he is changing his screen nic.

Landshark

--

Beware of George Busch WA3MOJ of Allentown Pa.
He is suspect to post from different ISP's, under
different screen nics, using anonymous mailers, just
to make harassing,accusatory style posts with
absolutely no useful content at all.
Currently posting as markbeck666@aol.commm
Please forward any post to TOSUSENET@AOL.COM.
Abuse@giganews.com Abuse@Comcast.com and
complain about how this person is using false headers
with references to their services to by pass newsreaders
filters.

But you ARE allowed to use Icom mikes (but be forwarned, this particular mike does have a preamplifier built in, and it does expect the power from the radio through the mic plug - overlayed over the audio input, I believe....)

Nice old locker -- almost ready to undergo the keyclown restoration
process:

1. Disable the AGC, compressor and limiter;
2. Crank the modulation until the plates glow;
3. Install a wideband VFO;
4. Scrap all the filters and traps;
5. Snip the neutralization for some "swang";
6. Align all double-tuned stages for peak;
7. Masturbate for three days.

>place. Take it easy.

I have to disagree with you there, Bert. The FCC operates with
Congressional authority, and that's the branch to which it is directly
responsible. The FCC is in court all the time regarding its actions
(and not just enforcement of NALs) so that's another branch to which
it must answer. Also, its funding allocations are made through the
executive branch, so there's some influence there as well.

I don't know much about the IRS, except that it's a public nuisance.

>73 de Bert
>WA2SI
>
>P.S. While I'm often pleased by the results of FCC enforcement actions, I must

Agreed. I should point out, and I'm sure you are already aware, that
I'm no big fan of the FCC, and not just because of the lack of
enforcement. On top of other reasons I have stated in previous posts,
there have been many U.S. Supreme Court cases where one or more of the
Justices have expressed serious misgivings about the FCC, even
suggesting that some of their regulations may be unconstitutional.

its not the aggregate hetrodyning signal that is the trouble. its way beyond that to the point to where there are so many signals they no longer mix and cause a heterodyne in the reciever there just pure white noise. whether every cb'ers in the world was using the legal limit or not there are still just too many people to occupy 40 channels during a dx opening without there being major chaos regardless of power levels. 4 watts is plenty to give a full s meter reading across the country and with every cb'ers in the country running 4 watts and giving everybody else a full s meter all at once then you have the dilema we face in cb daily. the amps are there and being used and i'm sure your right about them raising the level of noise some but they are far from being the actual cause and any attempt by you or dave to make them seem so is more for your anti amp agenda than it is the truth

Tim, be careful you are stepping into an area where you may not want to go. By posting as WA3MOJ George Busch you are intentionaly forging me . There can be no mistake of who you mean since there is only one WA3MOJ. You are leading people to that belive you are I. If you would like to post with the name george Busch you have my blessing and this will show a form of flattery on your part. But to use calls sign and name is a fraudulent activitie, impersonating any person or entity or forging anyone else's digital or manual signature. You will be on notice as of this point.

Go back to raising pigs or cattle or whatever it is you do on that swamp land you call home, because radio is not something you have even the slightest grasp, beyond "CB science", and "hack shop theory".
Dave
"Sandbagger"<<

Educated people are aware one cannot argue with a bigot. A bigot permits their hatred for all who speak differently or have a different skin color or don't conform to a certain point of view, to obscure any sense of morality that previously may have existed.
  Reason does not work with bigots. The only effective weapon against bigots is age--for with age comes sickness and death, a time for bigots to die, which by then is too late to learn even the rudimentary rule of keeping bigotry to oneself.
    Whether the hatred is for an entire culture or in your case, a select group of nameless, faceless people you chose to accuse of being criminals based on their choice of subject topic, (key word being "hatred") your constant belittling and personal off-topic attacks are simply the direct result of your inability to communicate effectively or properly and a direct reflection on the people who reared such. This time, even the losers that drink out of the same dog bowl you do didn't come to your aid..they can't stop laughing at your incompetence.
THE definitive source is the observatory and people like you that can't comprehend their data go to hammie sites with interpretations that are dumbed down versions of what was attained from the source. Even NASA knows this.

oh ok.....fatso.....so you say it is ok for you to sit there
doing your best imitation of a human smoke stack.....blowing
harmful second hand smoke around , while i am trying to eat my
dinner.....??? so that is your constitutional right .....is

that correct???? you know, if dave doesn't want something to go on at his meeting.....that is his business.....if you don't like it don't come to it.....but it has nothing to do with the constitution of the united states.....please spare us the silly lecture.....

2935. Help Find CB WEB Site, Soringfield MO

Newsgroup: rec.radio.cb
Date: 2002-05-02 15:25:46 UTC
From: winlyn@alltel.net
Message-ID: <3cd15947.23788926@news.alltel.net>
Source record: 122750

Several weeks ago I came upon one of the best WEB sites I have ever incountered. Thought I saved it but it is gone.

It is a CB Home Page out of Springfield MO. The background on the main page was an organge astrology picture, maybe of a black hole. It had several running bar tables on the main page.

Any help anyone can give me will be appreciated.

Winston

Bert you may not have a problem with it, but you also forgot to consider the reason the 11m band exits at all for unlicensed use. It is meant for local personal communication by the general public. While 30 "clean" watts maybe OK in your book the guy across town, that has zero interest in what the 30 watt station has to say, is stuck having to hear him. One can't just dial to another clear channel in your case since the band would be populated with those "clean" 30 watt stations. The 4 watt limit is meant to very deliberately limit the range of the radios, and thus the interference to other stations in the area. This by the way is why those FRS radios are limited to 500 mw max power, to limit interference to the business users who share the same frequencies as the FRS radios on channels 1 to 7. They don't need to hear a bunch of kids yaking it up all over town on a truck dispatch frequency.

You have several beefs and have stated as much. I work the world barefoot on a regular basis, don't tell me I can't do it.

>Most of which you do on the freeband, which is part of my point.<<

Lelnad used to insert little one-line lies like that in attempt to lend a mirage of truth to his BS...you see where it got him and how he is now perceived......and you think it's a coincidence I allow you to carry on.

> It's much easier on the freeband, where it isn't as much of a circus.<<

Well, sure it is, but it has nothing to do with anything.

>Pay attention (I know it's difficult for you).<<

Basic skills concerning communications that should have been instilled during your formidable years by whoever was responsible for raising you is readily lacking, but at this point in your life you can't blame another, not your mother or father or that big bad cber that tears you a new hole on a regular basis. At some point, you will arrive at the conclusion that we are all responsible for our own happiness and how others choose to live their life will mean less and less as you mature.

>Since the freeband has less people, and the need to run power is less, the level of hetrodyne is less, therefore your prospects for hearing (Remember, if you can't hear 'em, you can't work 'em) a DX station are far greater.
I "labeled" selfish, inconsiderate idiots as exactly what they are. <<

>Their actions affirm it.<<

What actions? The only "action" here are words and you have brilliantly shared your intolerance for those who do not believe as you feel they should. No, you based several of your attacks on words, not actions

>Every time I turn on the radio, I am witness to the "actions" of the people that are currently transmitting. Running excessive power, and not sharing the frequency with other users is clearly evident. Pardon me for believing in old fashioned conservative moral values, and common courtesy. If you oppose these values then YOU are the sociopath.<<

Wow, your level of intolerance runs deep. If one opposes your values, they must be a sociopath...how droll..(chuckle).
Whatever...your lie about "actions confirming it" are just more BS from your bile duct of waste.....you called many names and hurled many insults based merely on discussion content...what you hear on your radio has not a thing to do with this forum and your conduct unbecoming and is

no excuse for your blatant hypocrisy...it was you that cried 2 wrongs don't make a right.....you rail against those that you perceive as breaking some certain legal laws based on what you hear them say on radio and their potty mouths and behavior...BUT you come on here and act like those thatyou cry, bitch and moan about.....you have reduced yourself to the level of that which you purport to care about, showing you place a greater value on what is heard on radio than what you read in usenet so you drop any morality that may apply to your behavior on usenet but wish to apply those same standards to others. I just point these things out.

>I did not name any specific person or persons who post here.<<

But you did. Perhaps memory isn't a strong point of yours. This is another back-pedal and fallacy...there exist several posts of yours where you expressly call names and accuse posters of being criminals based on their opinions they posted here, nothing more.

>Prove it. Find a post where I specifically refered to anyone by name in relation to criminal activity. I may have made comments along the line of "If it walks like a duck, quacks like a duck and swims like a duck, chances are it's a duck" with reference to illegal activity. If you fit the mold, then I'm sorry, but I didn't write the rules. The fact is that if you break the rules, then you are technically a criminal. The fact that you haven't been caught yet should be of little comfort.<<

You already proved it, quite effectively..
Then of course, we have your admitted taunting.....

>Only to you, because you're an idiot. One that I am slowly tiring of. <<

Only because you are so s-l-o-w. Most would have realized they were being forced to self-ridicule long before you did.

>Chances are the "idiots" that make my CB experience less than ideal, are not even on the internet.But the "label" is still accurate, no matter how many ways you attempt to spin and justify it.<<

You attach a label and look to another to justify it,,,,,,,,you aren't making much sense. No one has justified any of your imbecile-like comments, because it can't be done and no one wishes to be of the ilk that labels another a "criminal" based on their opinions or subject topic in a usenet group..

>You seem to blur the line between opinion and fact quite frequently. Breaking the law makes you a criminal That is a fact.<<

Once again, you have no clue who breaks the law on here. Also, not being able to converse without letting emotions dictate your weak responses and redundant adolescent name calling is strongly indicative of a low intelligence level, unarticulation, no secondary education, and several other disabilities. This is also a fact.

>Trying to convince yourself that you have some god-given right to selectively ignore laws that you personally don't agree with, doesn't change those facts, no matter how long and hard you protest.<<

The same can be said for your childish mannerisms and the way you pigeon-hole any that disagree with your personal feelings on morality...but remember..I don't protest at all, fools like you bring it.

You simply claimed propagation is NOT channel specific, when it certainly is. Adding and comparing two bands located next to each other several days after your error is good enough for me....you realize you were wrong whether you admit or not.

>What do you consider a "channel"?<<

It was your term.

>In the context of this discussion, a "channel" is a 10 Khz wide chunk of RF that is associated with the CB band, I.E. channels 1 to 40.<<

Well, since it was your term you may choose to apply any meaning your black heart desires.

>Anything broader than that or in another radio service would not be refered to as a "channel".Yet on 27.025 I get solid S9 and above noise, while on 26.005, the
meter sits at S1 to S2 until a station decides to come in. The difference? Less people, and less people running power.<<

Less people due to not all cbers having extra "channels" certainly would equate less amp useage. It would also indicate less people on 26.005 own Mercedes Benz' as well,,so what? Your rationale is all fluff and meaningless, propaganda that you can't even serve up properly.

>The point, that you continually keep missing,<<

Another "point" that you fail to articulate.........

> is that if, as you claim, the sunspots were soley <<

"SoleLy" , as it should have been spelled, is your term, not mine.

>responsible for the noise level on the legal 40, and since the effects of the sunspots are not any different on the freeband, then it is on the legal 40, then the noise level should be the same on both. But the fact is that the noise level is significantly less on the freeband. This supports my conjecture that the noise level is propagated by the sunspots, but is created by the volume of people hetrodyning together, and further exacerbated by people running large amounts of power.<<

And is a far cry from your original claim that amps solely are responsible for noise on the freqs.

>On which frequency would you best be able to work a REAL DX station (real DX is not another state)?<<

It isn't? And just how did you arrive at this interpretation?
>
Ask any hard core, serious DXer whether they consider stateside to be "DX".<<

I'll take that as another concession...going from stating it as fact to quickly clarifying it is your personal opinion is akin to stepping in it and wiping off your shoe in your 2nd floor squalor apartment.

>It's pretty much a given among serious ham HF DXers, that stateside contacts are not considered DX. While this is indeed an "opinion", it is one that is shared by a multitude of people that live and breathe for this stuff.<<

Well, it doesn't apply here, as you are ina cb forum and state to state is considered DX by cbers.

> I'm surprised that you didn't know this, as much as you want to be a ham, even if you can't master the simple tests.<<

I don't live and breathe the stuff as you say you do..it's a hobby for me......but what can we expect from someone who claimed they were upgrading since last summer?

>Unless you're talking about Hawaii, it's no great accomplishment to work the "lower 48".<<

I thought you had a problem with echo.

>What does echo have to do with anything?<<

I already said it was no great accomplishment, excuse me, I thought it was echo when it was mere plagiarism that you are so adept at. And just to illustrate how little you actually know of cb propagation, Hawaii is no big deal from the sandpile, either. Alaska is a bit more difficult to obtain from here compared to Hawaii, while just the opposite is true for several other states.

>Unless, of course, you're talking about VHF and UHF.<<

By your definition of "channels" that you speak of, which are in the VHF and UHF band? Oh never mind, it's your attention span thingy kicking into mode again...

>We don't refer to the VHF and UHF bands as channels. That is a fallacy on your part.<<

You're the one that brought UHF/VHF up in the same paragraph as "channels", also your topic.

>Then, by virtue of the frequency bands (Note that I did not use the term "channel"), involved, stateside would be legitimate DX. <<

Oh, you mean from your nocode perspective? Well, damn why didn't you say so in the first place instead of reducing yourself to what you have?

>Pay attention. I passed my first ham test in 1981. <<

And the failure to impress anyone here upsets you greatly..LMFAO!

>There wasn't a no-code license then. I personally prefer bands above 50 Mhz simply because I prefer local rag chewing to DX chasing. Since propagation is much less frequent on VHF and UHF, when it does occur, it provides a nice temporary (key word temporary) diversion from the norm. But it doesn't hang in there for long thankfully.
Which frequency would you be better off trying to have a local roundtable with stations 10 miles away?<<

Even taking into consideration the limited gray matter you have at your disposal, I fail to see how one arrives at the conclusion that anyone present cares one iota about anything you have to say concerning VHF/UHF propagation, it doesn't apply to cb and your constant and redundant failures at making ham radio a topic-to-impress among these pages is akin to watching an old has-been on the silver screen pathetically whining for a chance at a comeback on TV, the very medium he once shunned.

You always quote the exception rather than the rule to lend some credibility to your flawed arguments. 6 is not indicative of any other channel, so your question is one of non-relevance.

>Channel 6 may be the worst case, but it is hardly the exception.<<

But YOU used it in your flawed example, regardless of your personal opinions or emotions of the issue.

>Flawed only in your mind. The comparison was nonetheless valid.<<

You have failed to make any valid analogy yet to date.

>Conclusion: The sunspots are not creating the noise level, the people using the channels are.<<

Oh, so when the sunspot activity is gone, the people will disappear all at the same time because they all put their radios away on the same day? Don't think so.

>No, once again you are confusing a "conductor" with a "signal source".<<

(Yawn) This oughtta be good.....

>The sunspot propagation is nothing more than a conductor of long distance radio waves. If the DX were running, and there was no one transmitting, you'd never know it because the QRN would not be significantly more than during the low sunspot point. Put many stations on, and that conductor will carry them all over the globe. Increase the signal, by increasing the power, and the level of the signal will be greater. Combine all the stations together and you get what is commonly refered to as "hetrodyning",
which is what the noise level is all about. You can cut the conductor,

or you can cut the signal source. Both would have the same overall effect.<<

If you are referring to amps, no they wouldn't.

>But the conductor is not the source of the noise, the people hetrodyning are.<<

It's not caused by the amps alone and ridding of all amps would not make your noise go away.

Your attempt to apply it in this context is null and amounts to an incomplete fabrication without clarifying the obvious.

>The only thing that's obvious is that I'm attempting to educate someone that refuses to see the forest for the trees.<<

How can you educate anybody or anything when you have none yourself? Start with spellcheck,,,I told you this before...this is why there are so many hammies on the forum better to explain than you....they are articulate and take the time to research what they post,,,they offer assistance and don't claim they are above or better than others, even if some of them may secretly inhibit those feelings...if they can't spell, they at least use spellcheck to present a coherent post,,they don't call names regardless of their personal feelings,,,,and they don't need to bring up their hammie activities in a cb room in order to feel good about themselves....you are in the minority of hammies (thank GOD) and as your leader wrote a few weeks ago: "If I were to leave, you'd still have Sparky, George, Lelnad, and Dave Hall to deal with." How prophetic.

.you have never presented both sides of the story,

>Both sides of what story? What the hell are you babbling about now?<<

no matter which name you chose to post under.

>Now who's making wild accusations?<<

Really? Have you ever posted under any other name to this group?

.....the bottom line is,,,if their were no propagation, no good DX conditions, a million people wouldn't be heard no matter what they were running......

>True
But<<

No "buts". This blows your original amp theory all to hell.

>Another wild accusation?<<

Ok, ok, let's focus on my first accusation...have you ever posted under any other name to this group?

>You just love to engage in the same behavioral traits that you accuse me of. There's a word for that; Hypocrite. <<

And I see it's finally becoming more familiar to you. I never accused you of anything prior to your attacks and admitted taunting. You taunt then cry about the return you get? At least in my cave I was taught the finer merits of "treat in kind." What you were taught is readily apparent, but why would you shae your shortcomings with all unless you weren;'t even aware you were doing it? <g>

>The more people that there are, the more noise.<<

If there were no long distance propagation, it doesnt matter if there are a million people on the channel, you won't hear them.

>True, and if there were no people transmitting, when the skip was rolling, my radio receiver would not act any differently.<<

Right,,,you would hear not a peep.

>The more power those people use, then even more noise.<<

Except during times of zero propagation.

>But we're not talking about that. We're talking about during the high point in the sunspot cycle.<<

Only now did you clarify that.
We weren't talking about VHF/UHF either, but it didn't stop you from entering it into the equation...oh yea,,,"rules' of engagement only apply to others from your disadvantaged point.

>Power should not be required if the frequency that you use is fairly quiet.<<

Agreed, but you were using 6 as your example.

>An example of power crazed idiots run amuck, and the resultant noise level that it produces.<<

Nonetheless it was YOUR example.

No one ever taught you about location, location, location. You forget my location...salt water, salt water, and more salt water at my front door.....talking on the boat with an Antron at 12 watts SSB gets me worldwide more often than not. Double that gets me on the bowl (only from the water) and I have even talked barefoot there a few times. Let's see...it was only a few weeks ago I hit Mr. Blue way down under on AM........ <<

I seriously doubt that your groundplane, as good as it is, is enough to put your barefoot signal on the same level as the multi-kilowatt stations on the "toilet bowl".<<
And you continue to share your incredible cb wisdom and insight, as always.....

>I don't have "CB wisdom". I have the proper engineering RF background.<<

Then you must feel pretty ignorant making all those incorrect statements about how I can't get worldwide barefoot, or be heard on the bowl with low wattage. Concerning your statements about your alleged "background", I understand
what you think mentioning it does for you, but you simply are achieveing the opposite. Instead of blindly saying "It doesn't happen" you would be better to learn a bit more about cb propagation, especially concerning transmission from a boat, as it is painfully clear you have never had the chance to do so. Only then will you see the context your comments concerning your professional engineering background have constructed. Talk about not seeing the trees....

>If you and another person are seated at opposite ends in a large room, you can have a conversation, without really raising your voice. Now put about 100 people into the same room, all jabbering among themselves, and try to have that same conversation. Do you think it will be just as easy? Now put in a rock band with large amplifiers. Can you still have that conversation? The room(propagation) is still the same, but the ambient noise (Users of the frequency) have increased to the point that you can no longer override the background noise.<<

Analogies never were your strong point.

>Comprehending them was never yours.<<

They have to make sense before they can be comprehended.

>If you can't comprehend that rather simple example, what does that say about you?<

There is one who is superbly schooled in music/amps/sound production among us, and he would not hesitate to validate your comparison if he were able, but the fact remains they can not even be remotely compared.

Mother nature is adjusting her power levels as we speak.

>Thank God! Now the band might become habitable again.<<

With all your frequencies, it's hard to imagine why a hammie overly concerns himself with 40 measly channels of another service that he considers inhabitable when there are many freqencies in his own service that need cleansed, unless underhanded motives are considered.

>Once again, you fail to comprehend. Just because I have a ham license, doesn't mean that I can't enjoy CB. I was a CBer long before I was a ham, and I still have many fond memories of CB and the people that made it fun<<

Yea, we know the type, your old war-storied, mongrel tired old ass that has problems adapting to change. Your type romanticizes the past to such a ridiculous point,,,,well beyond what it actually was in an effort to preserve your golden, more happier days, which it is obvious you are well beyond.

>That may very well be true, but that doesn't change the fact that the CB band has degenerated significantly in the last 20 years.<<

Oh, it's true, it's true. And so has the world..it's all in how you look at it...you appear bitter because your time has evidently come and gone. You now pine away and yearn for a return of the "olden days."

>I long for a return to more civilized CBing,<<

Buy a lottery ticket, your odds are better than cb conforming to your standards.

>At some point, society will rise up against people like you who abandon traditional values,<<

Here you run with the lies. You don't like my ignoring certain rules concerning
radio so you lie about something you know nothing of, other than what I allow you.

>and continually flaunt your "I can do what I want, and screw everyone else" attitude.<<

I flaunt nothing. Perhaps it is my turn to request a single example of what you consider a "flaunt". And remember, a "flaunt" is not a retort to an initiated flame.
As far as my attitude of "screw you", it's limited only to
losers such as yourself who come to me begging for justification of my reasoning for selectively ignoring certain useless rules.. When you get nothing, you rant.

>Hopefully this will happen soon.<<

Have you tried holding your breath?

>where people can have some good natured fun without having to deal with mentally and socially challenged idiots.<<

Upgrade and stay off the nocode freqs and you will find less of these you speak of.

>The ones that I speak of are typically on CB and the lower HF ham bands. The VHF and higher bands are where the decent people hide out. <<

If your issues are of the nature of being "typically" on cb, your solution is simple..stay off it. Your indicational presence here affirms why you will continue to hang around anything cb related..

Hi Leland,

Long time no read. Hope all is well with you.

>Bert you may not have a problem with it, but you also forgot to consider the
>reason the 11m band exits at all for unlicensed use. It is meant for local
>personal communication by the general public.

I didn't forget to mention it. IMHO, it simply had no relevance to my statement. I also refuse to ignore the fact that the 11-meter Citizen's Band has evolved into a pseudo-hobby band, despite its original intent.

>While 30 "clean" watts maybe
>OK in your book the guy across town, that has zero interest in what the 30
>watt station has to say, is stuck having to hear him.

Leland, have you actually heard the difference between a 30 watt HF (Ok, Dick...low VHF.) signal and a 12 watt signal originating from the same point? One S-unit according to the book. Negligible in the real world. I still take a clean 30 watt signal on the band or as my neighbor rather than a dirty 12 watt one.

>One can't just dial to
>another clear channel in your case since the band would be populated with
>those "clean" 30 watt stations.

Sorry, Leland. There are already pleanty of clean 30 watt stations on the band. They (Including your's truly at one point.) have been there for many many years. Kinda makes you wonder why they don't show up more often (Or at all.) in the FCC enforcement log? It's much better to speak from the perspective of having been there rather than from supposition.

>The 4 watt limit is meant to very
>deliberately limit the range of the radios, and thus the interference to
>other stations in the area.

Apples and oranges. Sure, keep the 4 watt limit for AM. You didn't REALLY think I was refering to AM, did you? How about 8 watts AM and 25 watts P.E.P. SSB for the books, sound reasonable?

>This by the way is why those FRS radios are
>limited to 500 mw max power, to limit interference to the business users who
>share the same frequencies as the FRS radios on channels 1 to 7. They don't
>need to hear a bunch of kids yaking it up all over town on a truck dispatch
>frequency.

You realize now that you're opening up an entirely new can of worms, comparing an HF band to a VHF band. (Regardless of INTENT.) Mistakes were, are, and shall

continue to be made wrt intended vs. actual use of the 11-meter Citizen's band. Trying to compare a "too little, to late" patch to the collosal boo-boo of allocating a "short distance" Land-Mobile "Citizen's" radio service smack dab in a band that generously supports DX comms is just not makin' it. Additionally, the phenomenal international growth of 11-meter hobby radio practically ensures its survival. Quoting rules and intent will get us nowhere. Trying to find a real world solution somewhere in the middle may. Perhaps after 2003, another RM petition to remove the 155.3 mi. limit on CB will be filed. Hmm, wonder who'll file that one? ;-) Take it easy, Leland.

>The FCC operates with
>Congressional authority, and that's the branch to which it is directly
>responsible.

Granted, but this is still not the true principle of checks and balances. For this to be true, FCC rules and regs must be created via congressional legislation...just like most other "laws."

>The FCC is in court all the time regarding its actions
>(and not just enforcement of NALs) so that's another branch to which
>it must answer.

Actually, it's NOT judicial court wrt NALs. That's administrative court and it's YOU who must answer. That's right, the onus is on you to bring the FCC to court and prove your innocence...on your own tab, BTW. Despite what some may claim, an $8,000.00 NAL is not similar to a traffic ticket in any way, shape, or form. The term "Notice of Apparent Liability" is actually offensive when considering the principles on which our judicial system is founded. "I'm going to hand you an $8,000.00 slip of paper that says I think you're guilty and give you TEN days to haul my a$$ in my own court (Remember...administrative court AND judge.) to prove otherwise...at your own expense?!" Puh-lease!!!

>Also, its funding allocations are made through the
>executive branch, so there's some influence there as well.

Influence is no replacement for a true system of checks and balances, but it's all that's presently in place. Remember the bumper stickers? Bingo! Influencing your congressman to vote against the FCC budget is John Q. Public's only recourse right now. But that only applies to proactively trying to effect rule making changes. Not reacting to alleged violations of 'The Communications Act of 1934.'

>I don't know much about the IRS, except that it's a public nuisance.

They do seem to be trying to be more "citizen-friendly." :-) Take care, Frank.

I've been lurking here now for a couple of months and I have to say there are some really sick people here. This George fellow need to get a life. He constantly berating people, harassing them and making some out right rude comments. Aaron, while his intention is noble, goes about it the wrong way. You don't
go into a bee's nest and ask them to stop stinging, that's just nuts. Now you can say what you want about the cb, but I have been into the radio for over 25 plus years and have never heard troublemakers there, like I have here. Aaron, you can continue to say that linears and export radio are illegal, nothing wrong with that, but the always trying to put an illegal spin on everything is
not productive at all. George, nothing I can say will help you, you need to get some immediate mental health help. You have been HARRASING EVERYONE!
Only one thread did you talk about the subject, but every other thread you are calling people names, you sir are a TROLL! some poor girl asked for help, what do you do, make it your own personal vendetta thread. I have looked at the archives and I can tell everyone honestly, this George Fellow and Aaron are nothing but
a couple of trolls looking to cause trouble.

Aaron redirected:
OK, so I was 4 watts off. But when you're dealing with a general population of CBers who don't follow ANY rules at ALL, the point is moot. Given your history of lucid and thoughtful comments Bert, your suggestion of a 13 watt PEP increase "for the books" just doesn't make sense. Why 13 watts? And how would you enforce this new limit? Since you're both a ham and a freeband advocate, one could conjecture that you're between a rock and a hard place. Since 'export radios' provide access to the 'freeband' you might conceiveably want to see these legalized. On the other hand, you might also realize the sale of 'exports' is largely responsible for the current proliferation of 10 meter intruders. Yes, it is a sticky dilemma, and I'm quite curious to see how you resolve it.

>moot. Given your history of lucid and thoughtful comments Bert, your
>suggestion of a 13 watt PEP increase "for the books" just doesn't make
>sense. Why 13 watts?

Actually, if you trace this thread back...it's really not much of a suggestion. It's happening right now and it's gone on for quite some time too. I'm a realist, Aaron. To follow the rules just for the sake of following the rules is a good start...but it's not sacrilege in my book to deviate here and there. I also don't believe that condoning 30 watts is eqaul to condoning 3,000 watts, so you can trash that analogy before it even gets taken out of the toolkit. If you're running clean and are NOT causing any harmful interference, then you're cool with me...plain and simple.

>And how would you enforce this new limit?

Not my job. But I do pay the tab...and just recently too.

>Since
>you're both a ham and a freeband advocate, one could conjecture that
>you're between a rock and a hard place.

Nice try...well, not even. I don't advocate the freeband and I'm cetrainly in a nice and comfy place. BTW, 10 thru 80's my freeband. What's yours, Aaron?

>Since 'export radios' provide
>access to the 'freeband' you might conceiveably want to see these

No, Aaron. The intruders themselves are responsible, not the radios.

It is. I'm out pulling service duty. Nothing like seeing a $2k + gross pay check for working your butt off, thus little time to spend at the office posting messages to this NG. Have to make some money to spend at Dayton this month!

>
> >Bert you may not have a problem with it, but you also forgot to consider the

> has evolved into a pseudo-hobby band, despite its original intent.

I understand your point well enough, but somehow I just don't see any point in encouraging the evolution of 11m in to another "hobby radio service" when another one already exists, and we know the one I'm referring too.

> Leland, have you actually heard the difference between a 30 watt HF (Ok,
> Dick...low VHF.) signal and a 12 watt signal originating from the same point?
> One S-unit according to the book. Negligible in the real world. I still take a
> clean 30 watt signal on the band or as my neighbor rather than a dirty 12 watt
> one.

Well I can turn this logic around on you and argue the difference between a clean 30 watt signal and a 12 watt signal, as you say is only about 1 S-unit so I fail to see the point of mucking around with the higher power signal in the first place. If the CBers left their rigs alone in the first place we wouldn't have much in the way of dirty signals to worry about to begin with. The problem starts when they pry the lid off the rig and start to mess around with the circuitry without a clue as to the on-the-air signal it produces after they are done.

>
> >One can't just dial to
> >another clear channel in your case since the band would be populated with
> >those "clean" 30 watt stations.
>
> Sorry, Leland. There are already pleanty of clean 30 watt stations on the
band.
> They (Including your's truly at one point.) have been there for many many
> years.

So the CBer running a legal power station can't talk down the street because he can't compete with the higher power stations in the neighborhood. So Mr. Legal-CBer goes out and buys a 100 or 200 watt Linear so he can talk over the 30 watt station. Then Mr. 30-watt-CBer goes out and buys a bigger Linear .... See the point Bert? You may not read about it here on this NG much. but enough CBers buy amplifiers not because they have any desire to break the law, but they want to communicate and can't because they have to suffer with the interference from other higher power stations on the air.

> Kinda makes you wonder why they don't show up more often (Or at all.) in
> the FCC enforcement log? It's much better to speak from the perspective of
> having been there rather than from supposition.

What it does sound like is a kind of a "throw-in-the-towel" attitude the FCC took for far too many years regarding the crap going on on the 11m band. Suggesting that the power limit be raised for CB's looks like the same thing. Since so many stations are running above legal power you want to legalize the practice. The same sort of logic has been used to argue for legalize drug use. In the countries where that was done the problem only got worse. I'll bet the CBers running around the 30 watts you mentioned were permitted to do so legally would soon be running even more power illegally.

> >The 4 watt limit is meant to very
> >deliberately limit the range of the radios, and thus the interference to
> >other stations in the area.
>
> Apples and oranges.

Nope. As you should know if one is going to operate on HF then they need to know Morse Code, and prove it by passing a test. This is not to satifiy just the FCC but the international treaty requirements outline by the ITU. The only way we are getting by right now, with CB Radio, is by keeping a lid on the power, and by forbiding contacts over 155 miles. Also keep in mind that not all countries have a CB Radio band, and as you well know that some countries don't permit even Ham Radio!

Any of the countries, that have no CB Radio band, but use those frequencies for other uses, can rightly protest any expansion of use by simply pointing out that countries like the USA can't even control what happens on the band even now. They can do this at what are called World Radio Conferences, with the next one to be held in 2003. These conferences are where the rules and regulations of who gets what band for which use is determined. The last thing the delegation from the USA needs is complaints from other ITU members

over interference from our domestic 11m CB band.

> Sure, keep the 4 watt limit for AM. You didn't REALLY think
> I was refering to AM, did you? How about 8 watts AM and 25 watts P.E.P.
SSB for
> the books, sound reasonable?

That's only about a half S-unit. Think anyone is going to notice? If not
then why bother? The current design for CB radios already allows 4 watts AM
and 12 watts PEP on SSB.

>
> >This by the way is why those FRS radios are

> >frequency.
>
> You realize now that you're opening up an entirely new can of worms,
comparing
> an HF band to a VHF band.

I don't see where I mentioned "H.F." in the above. I was drawing a
comparison between low power FRS users with the high power business users on
the same UHF frequencies.

>(Regardless of INTENT.) Mistakes were, are, and shall
> continue to be made wrt intended vs. actual use of the 11-meter Citizen's
band.

I agree. But raising the power limit, etc., IMHO is making another avoidable
mistake. If CBer's like Radio as a hobby, fine, get a Ham ticket. Then they
can run power, learn how to do it the right way, and they can shoot all the
skip they want without having to worry about the FCC paying them a visit
with a "NAL" in hand.

lol...

My Mom lets me do what I want. It's a product of being a decent citizen all my life. However, there are some folks that post to this NG that feel they know what's best for everyone and want to control everything people say and do.

I don't own an ICOM, but I'm sure they're fine radios. Not being licensed, I would only be able to use one for monitoring purposes anyway. I use my TS-430S for that so I'm already covered.

Good luck.

If you had memorized those books Tim you could have avoided making a fool
out of youself over the FM bandwidth thread some weeks ago. You clearly
failed to understand the relationship between frequency devation ratios and
required bandwidth for a FM signal.

> just for the hell of it has shown a lack of desire to become

All I'll say about you comment above Tim is the quote below:

--
"Winners compare their achievements with
their goals, while losers compare
their achievements with those of
other people."

Nido Qubein

You may judge Hams by their license class, that's your fault. Most Hams
could care less.

linda.......we bees likes to buzz.....haven't you listened to channel
12 lately........especially when the skip is rollin in......??? good
analogy......the only reason these akc types get on a computer and do
what they do is that if they did what they did on a cb somebody would
buzz them out.........dig it.??? guess what i got for dinner .???
chicken in da pot and some polk salad and goats milk for
desert.........sdj around bear country in the big horn and i jus got
down.........

ps. nothing like some females jumping in on this thing.......we need
the female point of view that you girls can truely give......so lay
the smack down on those wascally akc's and put the bionic thump on
those mudducks......sdj is back quiet...........

You go!

>I understand your point well enough, but somehow I just don't see any point
>in encouraging the evolution of 11m in to another "hobby radio service" when
>another one already exists, and we know the one I'm referring too.

It's a done deal, Leland. We're talking past tense...and for a long time now. I just don't see any point in denying it.

>Well I can turn this logic around on you and argue the difference between a
>clean 30 watt signal and a 12 watt signal, as you say is only about 1 S-unit
>so I fail to see the point of mucking around with the higher power signal in
>the first place.

I agree, but if you remember what started this whole thread off; I said I personally have no problem with a guy (or gal) running a clean 30 watts via ham gear on the legal 40 channels. Now if you see black helicopters, like someone else on the newsgroup, this means:

a. Bert's "suggesting" that 30 watts be legalized for CB, hence...

b. Bert wants "export" rigs legalized, hence...

c. Bert advocates freebanding.

I know this is not you. I really couldn't care less if the change the legal power limit on the Citizen's band or not. I KNOW that many folks do run ham gear at around the 30 watt P.E.P. level "cleanly" on sideband and we're none the wiser. As long as you don't cause harmful interference doing this, I have no problem with you...period. No hidden agenda or false pretenses.

As for "freebanding," as you already know...been there, done that. Was nice for a while, but we all grow up. I made a conscious decision to stop. MY decision. To all those reading my words, it's easier to just take the tests and use all of the capabilities of that Yaesu, Kenwood, Icom, Ranger, or whatever other ham gear you might be running. If you do decide to test the waters, be aware of the

possible consequences. Personally, I think I got off very very luckily. But all it takes is one unhappy neighbor to complain a few times combined with some complacency (or plain arrogant stupidity) on your part and a pop visit...and you may get a multi-thousand dollar QSL card from Virginia. Who needs that? Not me. Same goes for running ham gear on the legal 40, albeit a drastically reduced risk. Your a$$, your choice...plain and simple. I'm pretty vocal when it comes to supporting 11-meters as a pseudo hobby band so I run a tight ship. A whopping twelve watts via a type-accepted transceiver on the legal 40. Do I monitor the freeband, you betcha! (Nothing wrong with that...yet.) So here it is...straight from the great freebanding advocate. LOL.

>If the CBers left their rigs alone in the first place we
>wouldn't have much in the way of dirty signals to worry about to begin with.

True, but hobby radio begats "tinkering." Such is life.

>The problem starts when they pry the lid off the rig and start to mess
>around with the circuitry without a clue as to the on-the-air signal it
>produces after they are done.

"Put the dikes down, take your hand of the limiter, and slowly move away from the workbench."

>So the CBer running a legal power station can't talk down the street because
>he can't compete with the higher power stations in the neighborhood.

Leland, I genuinely believe that you are trying to make this point for the "right" reasons. However, I've NEVER heard of a 12 watt station not being able to "talk down the street" because of a 30 watt station in the neighborhood. "Kilowatt Charlie" perhaps...but then we're actually talking about "higher power stations" now.

>So Mr.
>Legal-CBer goes out and buys a 100 or 200 watt Linear so he can talk over
>the 30 watt station. Then Mr. 30-watt-CBer goes out and buys a bigger Linear
>.... See the point Bert?

Not really, Leland. At the 300 watt level, your point hold water. At the 30 watt level, and on single sideband to boot, it ain't makin' it, my friend. Once again, that's from first-hand experience.

>You may not read about it here on this NG much. but
>enough CBers buy amplifiers not because they have any desire to break the
>law, but they want to communicate and can't because they have to suffer with
>the interference from other higher power stations on the air.

Sufficiently answered above.

>What it does sound like is a kind of a "throw-in-the-towel" attitude the FCC
>took for far too many years regarding the crap going on on the 11m band.

Agreed.

>Suggesting that the power limit be raised for CB's looks like the same
>thing.

No suggestion here. Leave it at 12 watts P.E.P., makes no difference to me.

>Since so many stations are running above legal power you want to
>legalize the practice.

Nope, I just have no problem with anybody running 30 watts P.E.P. cleanly.
"Kilowatt Charlie's" are quite a different matter.

>The same sort of logic has been used to argue for
>legalize drug use. In the countries where that was done the problem only got
>worse.

Irrelevant.

>I'll bet the CBers running around the 30 watts you mentioned were
>permitted to do so legally would soon be running even more power illegally.

Why, Leland...they could do so right now if they so pleased. "Past tense,"
Leland...past tense.

>Nope. As you should know if one is going to operate on HF then they need to
>know Morse Code, and prove it by passing a test. This is not to satifiy just
>the FCC but the international treaty requirements outline by the ITU.

Thus my comment "perhaps after 2003..."

>The
>only way we are getting by right now, with CB Radio, is by keeping a lid on
>the power, and by forbiding contacts over 155 miles.

Who is getting by? I've worked Europe and South America with 12 watts P.E.P.
and Japan with 17 watts. You're not actually going to attempt to debate the
control of distance by means of limiting power, are you? Mother nature's amp,
the ionosphere and your local QRP club may be interested in hearing your
argument.

>Also keep in mind that
>not all countries have a CB Radio band, and as you well know that some
>countries don't permit even Ham Radio!

True enough. I hope you'll also bear in mind that some other countries don't
share the same "anti-CB as a pseudo-hobby service" attitude, despite satisfying
the ITU with "paper tiger" rules on the books?

>Any of the countries, that have no CB Radio band, but use those frequencies
>for other uses, can rightly protest any expansion of use by simply pointing
>out that countries like the USA can't even control what happens on the band
>even now. They can do this at what are called World Radio Conferences, with
>the next one to be held in 2003. These conferences are where the rules and
>regulations of who gets what band for which use is determined. The last
>thing the delegation from the USA needs is complaints from other ITU members
>over interference from our domestic 11m CB band.

It's so quiet, I swear that I can hear a mouse pee on cotton. I'm all ears, Leland. Haven't heard a peep from them lately...actually I don't remember ever hearing much "international" outcry re. the "11-meter problem." But I have seen www.alfatango.org and www.sugardelta.com along with literally hundreds of other international DX groups. What gives? Maybe there is an international statement being made?

>That's only about a half S-unit. Think anyone is going to notice? If not
>then why bother? The current design for CB radios already allows 4 watts AM
>and 12 watts PEP on SSB.

Agreed. Remember my initial statement, not the "proposal" that's been assigned to me.

>I don't see where I mentioned "H.F." in the above. I was drawing a
>comparison between low power FRS users with the high power business users on
>the same UHF frequencies.

You were stating that FRS (VHF) is at 500mW to limit distance. This discussion is about CB/11-meters, which is in the ITU's HF designation. (I know, Dick...low VHF.)

>I agree. But raising the power limit, etc., IMHO is making another avoidable
>mistake.

Don't raise the power limit. Get rid of that stupid 155.3 mi. distance limit and bring back licensing.

>If CBer's like Radio as a hobby, fine, get a Ham ticket.

Some are not ready for a ham ticket. It doesn't have to be "all or nothing." I'd have thought your verbal sparring sessions with Dick over the "Lifer Tech Syndrome" would've shown you this. It's perfectly fine to be content with CB as your "hobby" or use it as a stepping stone toward ham radio. Likewise, VHF enthusiasts don't HAVE to "progress" to HF to be "real" hams. In either case, it's a personal choice.

>Then they
>can run power, learn how to do it the right way, and they can shoot all the
>skip they want without having to worry about the FCC paying them a visit
>with a "NAL" in hand.

If they keep it at a clean 30 watts, they don't really have to worry right now. (Which goes back to the original point of this thread.)

>> Hmm, wonder who'll file that one? ;-)
>
>Maybe you? 8-))

It's even money at this point.

>You going to Dayton?

Don't know yet. Believe it or not, my XYL wants us to go. Take it easy.

If you were really sorry, you would put all your stuff in
one post.

If you were good, you would create a for sale web page and
direct everybody to that. You can update the web page with
what's been sold, and put new stuff on it at will.

Let's see...

...we have Dave & Debby sending emails to innocent posters telling
them they are going to hell because they are violating God's will by
interracial dating.

...we got a whole bunch of CB outlaws, most notably TRA1N, willfully
breaking federal law by advertising CB amps for sale in the NG and
bragging about doing 150 mph on the Jersey Turnpike.

...we have the inimitable Twistedhed, who gleefully brags about
mistreating his pets and fantasizes about shooting trespassers.

...we have SD Jones who continually posts hints of physically harming
people he doesn't like.

...we got a bunch of bubbleheads who try to squelch all talk of
legalities, yet cry "free speech" if you mention they shouldn't use
the NG as a marketplace to advertise illegal goods.

Yet you see old Aaron and George as the big problem here? What kind of a mother are you?

"Linda", if I were you, I'd take a leeeeetle closer look at this NG.

-Aaron-

Not that I think your a real Person But Ill bet you are a real Fat ass .
Any female that talks on the CB usually is, especially any that would post
here.

3000. REPOST: Back! By popular demand! Dinner at Aaron's

Newsgroup: rec.radio.cb
Date: 2002-05-02 23:56:57 UTC
From: dweebospanka@aol.com
Message-ID: <20020502195657.04378.00010779@mb-fi.aol.com>
Source record: 122864

(Knock at the door) Aaron opens door wearing his skimpiest thong underwear

Aaron: Hi Sparky! How are you!

Sparky: I'm good Aaron. Is dinner ready?

Aaron: Almost. In the meantime, you can snack on me, but we need to hurry before George gets here.

Sparky:(screaming) Aaron! Will you shut up with the advances! I already told you I've started to like women now! Now leave me alone!

Aaron: OK, OK! I just thought we could be like the old days again.

Sparky: No, I'm really going to stick it out this time.

Aaron: (sniffling) Ok Sparky, have it your way. I'll respect your wishes.

Sparky: Where's George? Do we have to wait for him to eat?

Aaron: Yes, he's bringing the salad.

Sparky: OK. Got any snacks?

Aaron: I think so, let me check.

(knock at the door)Aaron answers the door.

Aaron:(exclaiming) George! My God! What happened to you?

George:(crying) I was just out minding my own business, following this little girl, and all the sudden, wham! Her Dad must have seen me and punched me. I had just asked if she wanted some candy too. I think I could have had her. Then the Dad pulled out of the window of my Pacer, and beat me some more. I think he dislocated my shoulder too.

Sparky: Can we eat now?

Aaron: Sparky, can't you see George is hurt? Go get one of the steaks for George's black eyes. And while you're in the kitchen Sparky, get some ice for his broken nose and busted lip too.

Sparky: OK, but I ain't eating the steak that you use on George's eyes!

Aaron: OK, whatever!

(Sparky spends fully 5 minutes trying to figure out which steak is the smallest, so he can have the biggest…then finally he returns)

Aaron: God Sparky! Why did you take a bite out of it? It's raw, for Christ's sake!

Sparky:(unintelligible mumbling caused by mouthful of raw steak)

Aaron:(grabs steak from Sparky and applies it to George's eyes) There now George. Is that better? Aaron knows how to make you feel better, doesn't he?

George: Yes Aaron, it's much better now. Thanks, you know I bruise easily.

Aaron: Hey Sparky, light the grill.

Sparky: Hey, those steaks ain't half bad raw! Do we really need to cook them?

Aaron: My God Sparky! Sometimes you act like a Neanderthal! Light the damn grill!

(Sparky goes out back, turns on the gas, clicks the igniter repeatedly, nothing happens. Goes back inside for matches and returns)

Aaron:(just as Sparky lights the match) NO! STOP!

(loud explosion)

Sparky: (screaming) I'm on fire! Somebody help me!

(Sparky runs back through the house with his beard on fire, screaming for help. Aaron and George race behind him with teacups filled with water)

To Be Continued

Of course I have read it, while YOU have only read 3 words of it. THE
Constitution is THE supreme LAW of the land, and ANY law that is repugnant
to it DOES NOT have to be obeyed!

> >
> > Maybe you missed a couple... ok, you missed a lot of classes in grade

I didn't miss any brainwashing in the govt. schools! But The Bible
UN-washed my brain so I can READ & Think now, instead of what Tom BrokenJaw
wants me to think, and the rest of your liberal clones that spew out their
brainwashing from the rich!

> > school. No matter what you call it, this government runs on a system
> > of "checks and balances". The exectutive and legislative branches are
> > directly elected by WE THE PEOPLE. The

You think they are but they are NOT !

members of the judicial branch
> > are appointed and approved by the other two branches, so you could say

I believe that the word you are looking for is Elected (some are).

> > that WE THE PEOPLE elect them indirectly.
> >
> > And contrary to what you want to believe, even the Constitution can be
> > changed by a super-majority of those people elected by WE THE PEOPLE.

There is provision in the Constitution to change it, Constitutionally.
IF it is not done constitutionally, it is AGAINST the LAW !

> > In that way the government can be both rigid and flexible.

No, we ain't suppose to have "flexable" law that came into being by
Cordozo the bozo supreme court inJustice in the 30's. Law was set in cement
and rarely changed from 1787 to the 1930's. Then in the 30's, the
"evolution beliefs" that anti-Christ Darwin started crept into the Law
System and starting the CHANGE to more socialism & Communism (including the
fcc) that has changed the USA from a CVonstitutional Republic to a Communist
"Democracy."

> >
> > Wanna know what you can do to change the government, Dave? Vote, and
> > vote responsibly. Every election day you

Does "responsibly" mean to vote for yo liberal pinko candidates?!
The Constitution says that WE HAVE A RIGHT to petition the Govt. for REDRESS
of GRIEVENCES. Voting is only 1 way of doing this. There are other ways
that you liberals do, but you don't want US doing to get our country BACK !

send a message to the
> > government. You do this whether you vote or not. You get to choose
> > between two or more people that best represent your beliefs. Ok, the
> > choices sometimes aren't the greatest (I think it was Helen Keller who
> > complained about voting saying something like, "We choose between
> > Tweedledum and Tweedledee"), but between any two candidates there is

THe differences are from the Dummycrat socialist candidate to the
Repooblican socialist candidate!

> > always some distiction. Not voting also sends a message: it says that
> > you are content with all of the candidates.

No, it says that WE KNOW the set up scam and we ain't participating
in da ILLUSION any more!

> >
> > There are many other ways to get things going in the right direction.

> > You can petition for a bill. You can challenge a law in court. You can

Only if you have been damaged by the "law" can you challenge it in
court, unless if, of course you are the COMMY ACLU!

> > work to sway public opinion (btw, logic and reason usually work better
> > than whining to convince people of something, Dave). You can establish

I ain't whinin', whiney! IF you ain't sighin' & cryin' at the shape of
the country NOW, den you ain't an American!

> > a political lobby, just like those loathesome hammies! There are lots

Hammies ain't loathsum. Liberals are!

> > of avenues to change.
> >
> > But I'll bet you that people just aren't ready for your ideas of

> > government, Dave. Especially when those ideas involve giving up

MY ideas are GOING back to the Constitution, instead of the myrad of commy laws we have now. You are either going to be FOR the 10 Commandments of God, or the Babylonian Talmud (the traditions of the elders Jesus talked against).

> > Consitutional rights. Your ideas are made even more distasteful when
> > you speak them in the name of freedom, yet mingle them with comments
> > of racial prejudice and religious intolerance.

What "racial" prejudice are you referring to? I ain't against the Bros. on Channel 6. And Religious intolerance? We better read what GOD has to say in the Bible about that, and what HE thinks about all the anti-christ religions, like your beloved MURDEROUS and INTOLERANT Mooselims! Go to Soggy Arabia and tell them that Jesus said that he IS the ONLY WAY and see what intolerant is! Our Constitution permits these anti christs here. but THEIRS don't permit US there! DOes that bother your puny little TV damaged brain?!

If there was such a
> > thing as 'criminal hypocrisy', you would be committing a felony!

There you go again basdhing the 1st Amendment! YOU ARE the criminal here!

> >

Tim, with all due respect, Bullshit. Getting a ham ticket is not taking Holy Orders, it is a simple acquisition of a privlege which does not eat nor in fact cost a damn thing to renew forever. Seems like you went to a lot of effort only to let your manhood get in the way.

Contrary to popular belief, being known to the FCC does not really affect the process or the penalty for doing something stupid so that is no good reason.

Between the two of you there is not a lot to choose from but Leland is at least a more honest soul.

Yeah, I've seen it already. I have to emphasize that although I may disagree with what Aaron has to say, I'll defend his right to say it. That is to say that making fun of him, name calling, or creating hurtful websites is not the way to deal with anybody on a newsgroup.

If you really want to verbally spank Aaron, do it the right way; By answering his posts with well thought out counterpoints supported by facts. Then, as I've said before...it becomes all too easy.

Some did, some didn't. This is an older one with three racks, so my guess would be that is has all the audio conditioning circuits in the first locker.

<snip>
>> >3. Install a wideband VFO;
>
>I wonder if the present tank circuit would operate at 27 mhz?

Tank? TANK? We don't need no stinking TANK!

<snip>
>> >6. Align all double-tuned stages for peak;
>
>Call the Fire Department!

Actually, what that does is narrow the bandwidth, and can make the audio sound like you are talking into a tin can, or worse. Modern radios have ceramic IF filters with a flat passband and steep rolloff, but before those came along it took much more skill to align a radio.

You might as well try Telephone Operators or the local Post Office to were he resided before... You never know, it might be a good shot?!.

There's also a telephone no. (411, I think?) that might help you, if it's available in your area?!

She /you also can also probably find out through one of his current/former friends?!

At any rate, don't be discouraged by the low-life of this group, persistence & patience yields great results.

>legislation...just like most other "laws."

I'll give you that. But the delegated authority is not without
accountability.

>>The FCC is in court all the time regarding its actions
>>(and not just enforcement of NALs) so that's another branch to which
>>it must answer.
>
>Actually, it's NOT judicial court wrt NALs. That's administrative court and
>it's YOU who must answer. That's right, the onus is on you to bring the FCC to
>court and prove your innocence...on your own tab, BTW.

uh, I'm assuming you mean "civil" and "criminal" court instead of
"administrative" and "judicial" court, respectively. Regardless, both
are actions that are brought in the same judicial court system, both
types of actions can result in creating new case law, and both can end
up with the Supreme Court declaring a law to be unconstitutional.

> Despite what some may
>claim, an $8,000.00 NAL is not similar to a traffic ticket in any way, shape,
>or form. The term "Notice of Apparent Liability" is actually offensive when
>considering the principles on which our judicial system is founded. "I'm going

>you TEN days to haul my a$$ in my own court (Remember...administrative court
>AND judge.) to prove otherwise...at your own expense?!" Puh-lease!!!

Laws can be enforced via civil or criminal law. Case in point: the
lady here in Spokane that had a problem with the keyclown next door.
She could have pressed criminal charges for nuisance, but she opted
instead for a civil remedy. Either way the law is enforced.

>>Also, its funding allocations are made through the
>>executive branch, so there's some influence there as well.
>
>Influence is no replacement for a true system of checks and balances, but it's
>all that's presently in place.

I forgot to mention that the executive branch appoints the
commissioners. So it's not just influence.

> Remember the bumper stickers? Bingo! Influencing
>your congressman to vote against the FCC budget is John Q. Public's only
>recourse right now. But that only applies to proactively trying to effect rule
>making changes. Not reacting to alleged violations of 'The Communications Act
>of 1934.'

Again, I don't think that's the only avenue available, but it's still
a good one. And it's much less of a headache than trying to get a law
overturned in court. The problem with the court approach is that
whenever the FCC is in fear of a ruling of unconstitutionality they
drop the case, thereby keeping it out of the higher courts because the
appellant no longer has standing. The ironic thing about that is that
the law being challenged will become unenforcable. So the judicial
system still works, but works indirectly.

>>I don't know much about the IRS, except that it's a public nuisance.

Glorioski, I am not an honest man but I do have pride; I don't sell out cheap. As one of the songs from an unremembered contemporary of Billie Holiday put it, I'd rather sit on it than give it away for free.

But the key point is that I am not suggesting honesty with anyone but yourselves. Neither is a shining example but your story is worse if you believe it than if you are lying thru your teeth.

Integrity is everything: if you can fake that you have it made.

Right, sure, like I haven't heard that before...

Just two questions, Dave: The Constitution says that "Congress shall
make no law respecting an establishment of religion, or prohibiting
the free exercise thereof".

1. Does that mean the government is supposed to follow the Ten
Commandments?

2. Does that mean Muslims, Jews, Hindus, Buddists and athiests should
be outlawed?

>sparks, yes indeed i am fascinated why it seems that all you AKC types are gay.

Now you are saying that I'm not just fascinated with masturbating keyclowns but that I'm gay? How many times do I have to remind you who first brought up the subject of homosexuality in this thread? It was you, Tim. No matter how hard you try to backpeddle, thems the facts. And in case you didn't notice, you were the ONLY one that jumped to such an extreme conclusion.

>for you to even bring up or make mention of men (how many women are regulars
>here?) masturbating is gay in and of itself

There again you are making assumptions, Timmy. I never said men, I said keyclowns. As to how many women are regulars here, I have no idea, but I would guess very few. How many women attend keydowns? How many women use CB radios? How many of them run power? You don't know, do you? So how can you say that all keyclowns are men? Or is that you -wish- they are all men...?

> because that means you were sitting
>over there contemplating number 7 as your big punchline for sometime anmd
>thayts just plain wierd.

You know what's weird, Tim? The way you and other keyclowns get so turned on by big amps and swinging needles (which is probably a subconscious pthallic fetish). It's not just sociopathic, it's downright perverted!

> this is enough of this subject. i've had to type the
>word gay way to many times recently ind ealing witht he akc'ers

That was YOUR choice, Tim. But in case you couldn't tell (and you obviously can't), my reference was to the unwarranted excitement that keyclowns get from big and dirty radio equipment -- it had nothing to do with homosexuality.

If you want to discuss any latent homosexual urges you are having you should get yourself an alias and visit the proper newsgroup for the subject. I don't have a problem with you exploring your sexual tendancies, Tim. Just don't project those tendancies on me.

Are you sure? I don't think anyone really is. There are no absolutes
when it comes to band conditions. But you'd have to be a fool to not
acknowlege that the level of noise would be significantly lower if the
level of RF power were kept at the legal levels.

How much of a difference would that make? I don't know, but I am sure that whatever the level was, it would be better than what it is right now.

Like I said before, I was around during the past 3 skip cycles, and I saw first hand what the noise levels were, and despite the fact the cycle 21 occured at a time when the CB fad was at its peak popularity in 1978, the daily noise level was nowhere close to what I have witnessed during this cycle.
Sunspot data has proven that this cycle is no stronger (and in fact is actually less) than previous cycles, so it's not the degree of ionospheric propagation that has increased the noise. So what's left? The only reasonable conclusion is that there are either more total people on, or that the people that are on are operating with an average power level that is much greater than what was typical in 1978.

Forget it. DebbyDave is as off the rails as twisted, albeit for
different reasons.

While I admire his dedication to God, nowhere in the Bible does it say
to selectively ignore laws you don't agree with, or apply hypocritical
logic to situations.

Not everyone who believes in an civilized society is a "commie".....

I've been learning that lately. No matter how many points of logic,
rational thoughts, and even factual knowlege I may present, you still
stick by your irrational diatribe.

> A bigot permits
> their hatred for all who speak differently or have a different skin
> color or don't conform to a certain point of view, to obscure any sense
> of morality that previously may have existed.

Which includes the selective and reckless disregard for existing laws.

> Reason does not work with bigots.

Tell me about it. I've been trying, but you just don't get it.

> The only effective weapon against bigots is age

Hopefully. Most wet behind the ears, 20 somethings, who THINK they know
all the answers, usually learn through experience, and gain a wisdom
that can only be achieved through age. I'm hoping this will happen to
you in the next 20 years.

> Whether the hatred is for an entire culture or in your case,
> a select group of nameless, faceless people

Like those hams you constantly unload on, for reminding you that they
can legally do what you can only dream about, have and break the law to
accomplish?

> constant belittling and personal off-topic attacks are
> simply the direct result of your inability to communicate effectively or
> properly and a direct reflection on the people who reared such.

An accurate self-diagnosis. I've always felt that if your father had
smacked you upside the head a little more when you were a child, you
wouldn't have such a disrespect for society and the laws that govern it.

> This time, even the losers that drink out of the same dog bowl you do...

A prime example of your belittling and personal off-topic attacks.

> ....didn't come to your aid..they can't stop laughing at your incompetence.

They probably are laughing. Laughing at you for once again being the
newsgroup punch clown. And shaking their heads at me for not giving up
on you long ago. I admit, it's a weakness of mine. I like tough cases.
But you do take the cake, and I not sure you can be helped.

> THE definitive source is the observatory and people like you that can't
> comprehend their data go to hammie sites with interpretations that are
> dumbed down versions of what was attained from the source. Even NASA
> knows this.

Really? So what you're saying is that the sunspot data that's available
on all the ham sites are wrong, and only YOU, the mighty twistedhead,
has the "real deal"? If that's not a pompous, arrogant attitude, I don't
know what is.

Seriously, you need some psychiatric help. You have many issues, that
cloud your objectivity, and blind you to the facts. I've known people
that are narcissistic and self-absorbed, but that doesn't start to
scratch the surfice of what's running around in that little head of
yours.

I really must let this go, as it is clear now that nothing will ever be
settled. You will argue your wierd "CB science" theories in the face of
all sorts of evidence to the contrary. Evidence that you dismiss without
any supporting facts of your own (like this mysterious sunspot database
that somehow is at odds with everyone else).

i'd say you first suggesting the participants of this news group which are about 99.9% male sitting around doing sexual things to themselfs would be considered as you first bringing up fag type shit. i think the rest of the world would too and thats why your now trying to backpeddle so fast from it.

>How many times do I have to remind you who
>first brought up the subject of homosexuality in this thread?

yeah perhaps i'm the only one that notices that you, aaron, and george all make homo type remarks when it comes to the men cb'ers which totally dominate the cb keydown scene. i know of NO women that actually key at the line competitive, i dont think even foxy does so your idea that you may have not been talking about men is bullshit.

>There again you are making assumptions, Timmy. I never said men, I
>said keyclowns.

why wouldnt you know sparky? you spend hours a day on this newsgroup are you saying all of the sudden you havent been paying attention all this time?

Ah, no, I pointed out the fact that unless the operators know what they are doing the likely outcome would be interference to others on adjacent channels.

> i merly pointed out that you were indeed incorrect and the other 50
> or so post was you back stepping and crying about it.

After 50 or so posts you finally decided to ask somebody if I was right or not and found, much to you horror, that I was in fact right. Of course you played games dancing around the question I put to you because you didn't have a clue how to answer it, nor the significance to the issue at hand either. Further you did even bother to read the explanation I had posted a day or so before, which provide full details and references to verify the figures I quoted.

An interesting theory you are proposing. Are you of the belief that the propagation path can be "saturated" to the point that once a specific level is reached, that no further increase of power will push the signal above that?

I'd be interested is seeing your corroborating data so that we could consider this possibility. Note that I've never read anything along these lines in any of the ham magazines, and these guys have been dealing with DX for far longer than you and I have been on this planet.

BTW, I have NEVER heard an admitted barefoot station, in all my years of CB, give me more than an +10 over S9 signal, when the skip is running, and those cases are rare. I would be willing to bet that the vast majority of people that routinely push the meter into "the strawberry patch" are running hundreds, if not thousands of watts. It's not hard to tell. Most power stations, while having an impressive signal, do not understand the theory of modulation headroom, and will usually either backswing horribly, or have "raspy" sounding audio, as they typically overdrive their amps for the "big number". It's very easy for a trained ear to tell the difference between a stock power radio, and one that's driving a large amp.

40 watts is 10 db stronger than 4 watts. 400 watts is 20 db stronger. 4000 watts is a whopping 30 db stronger than a legal 4 watt station.

That means that if the level of skip noise were at S9 levels, and all the people were running 4 watts, then, if they suddenly turned on 400 watts, that signal would jump to a +20 over S9. This is not acounting for the affects of power addition as many people transmit simultaneously on the same frequency. It also doesn't account for the fact that not all people are running the same power. There will be a certain

percentage that will be running closer to 4000 watts. Those will be the guys that you can actually hear above the +20 over S9 signal, who are now giving you +30 over S9.

It has an effect. Much more than you are evidently willing to accept.

3067. New search options at radio-portal

Newsgroup: rec.radio.cb
Date: 2002-05-03 12:34:21 UTC
From: Willi Passmann <DJ6JZ@compuserve.de>
Message-ID: <aau06rath06$2@news.t-online.com>
Source record: 122926

The search engine radio-portal
http://www.radio-portal.org
was restructured completely. Now the following search options are at
your disposal on the start page:

Detail Search:
Here you may enter several search terms, which can be combined by the
operators
exact / and / or.
These functions offer the opportunity to adopt the selectivity of a
search. This is a great improvement compared to the previously used
routine. Now your search phrase does not have to fit exactly the
text in the database to get a usable result.
Additionally, a search can be restricted to one of the 63 categories.

Category Search:
These option corresponds to the former "Search in broad". Here you can
combine two of the given categories by the operators
and / or / not.
For example 'Reviews' and 'Antennas', to get an impression on choosing
one's own equipment.
This search routine is extremely useful to get an overview on a field of
interest - a search phrase is not necessary.

Advanced Search:
On a separate page all functions mentioned above can be combined at the
same time. So it is possible to restrict the number of results to a
senseful value or to find entries belonging to various search phrases or
categories.

I am currently working to enable a search within results pages as a
further option.

You will find further explanations and operating examples via the "FAQ"
Button.

The Classified Advert pages have been updated also. Here you can offer
or search for hobby related items.

I hope you will like the new options. They are meant as a help to find a
quicker way to radio related information. Meanwhile more than 34.000
pages are in the database - all of them were checked manually. Probably
one of the reasons, radio-portal got the Millenium Innovation Award by
Radio Netherlands Media Network in the year 2000.

Your comments will be appreciated.

Regards, have a good weekend.

I'm going down with 4 or 5 other people. It would be interesting to meet for
a quick coffee there. If I get anything at the Hamvention it would be a GPS
unit and some small portable antennas. I have enough radios to last for a
while.

Prove it. find the post and print it.

>..what you hear on your radio
> has not a thing to do with this forum and your conduct unbecoming and is
> no excuse for your blatant hypocrisy

You have it backwards. Th CB radio does not support this newsgroup. This newsgroup supports discussion about CB radio, and the activities that occur THERE. So what happens ON THE RADIO is far more relevant then the wacked out opinions of a few socially challenged newsgroup geeks, of which you seem to be the top contender for king.

>..it was you that cried 2 wrongs
> don't make a right.............you rail against those that you perceive
> as breaking some certain legal laws based on what you hear them say on
> radio and their potty mouths and behavior...BUT you come on here and act
> like those thatyou cry, bitch and moan about.

Really? When have I ever exhibited behavior similar to the rude, inconsiderate people on the CB band. If you don't like my frank, no nonsense responses, and occasional retaliatory sarcasm, that's your problem. But I'd never attempt to squelch rational discussion. Something you don't seem to be able to do.

.......you have reduced
> yourself to the level of that which you purport to care about, showing
> you place a greater value on what is heard on radio than what you read
> in usenet

Well DUH! This is a forum about CB RADIO, not a forum about the lives of computer geeks that just want to talk about CB radio, but never actually participate. I care about what happens ON THE RADIO, I am concerned when THE RADIO has become something that it should not be. I would like THE RADIO to return to a more civilized state. I share these concerns and swap other ideas with other people who are also RADIO enthusiests, via the USENET, but USENET is not the be-all and end-all of existance, and certainly is not always representative of what CB radio is all about.

> so you drop any morality that may apply to your behavior on
> usenet

Such as? Name a time where I've done anything "immoral" on USENET.

> >I did not name any specific person or persons who post here.<<

And you'd be wrong. Try telling it to the judge, when you're ever caught breaking the law. Tell him you have a god-given right to selectively ignore laws that you don't agree with, and see what he says.

>

I never made that claim. I simply said that amps were responsible for the INCREASED noise level over what I experienced in 1978, when most people still ran legal or less than 150 watts.

>

> I don't live and breathe the stuff as you say you do.

Pay attention, I never said *I* live and brethe the stuff. I have far too little time on my hands to play radio 24/7. I'm more concerned with raising my daughter properly so that she doesn't embrace some wacked out anti-social mindset, like you have.

.it's a hobby for
> me......but what can we expect from someone who claimed they were
> upgrading since last summer?

What? When have I ever made a claim to be upgrading? You can't even keep your opponents straight

> Oh, you mean from your nocode perspective? Well, damn why didn't you say
> so in the first place instead of reducing yourself to what you have?

>
> >Pay attention. I passed my first ham test in 1981. <<

> And the failure to impress anyone here upsets you greatly..LMFAO!

It was not meant to "impress you", only to illustate that your
insinuation that I am a "no-coder" is flawed, due to my obtaining my
license long before there was a no-code license. But once again, you
missed the point.

>
> But YOU used it in your flawed example, regardless of your personal

No, it wouldn't but it would REDUCE it significantly.

> no matter which name you chose to post under.
>
> >Now who's making wild accusations?<<
>
> Really? Have you ever posted under any other name to this group?

Hmm.... let's see. As far back as 1996, I have used this same account
and my name is my name. Before that I was "squatting" on an account from
a local college and used the "Sandbagger" name. Other than that, I have
not used any other name. I know you think that there is only one person
out there that has a problem with you, and that they keep changing their
usernames. But there are far more people, than you can admit to, who
find your perspective warped and a little scary.

>
> .....the bottom line is,,,if their were no propagation, no

> me of. There's a word for that; Hypocrite. <<
>
> And I see it's finally becoming more familiar to you. I never accused
> you of anything prior to your attacks and admitted taunting.

I don't "attack". I mearly retaliate. You make sly innuendos and insinuations about my credibility. I don't play that game. I call a spade a spade, and it's clear to me now that you have severe psychological issues, beginning with a highly over-inflated opinion of yourself.

As far as the "taunting", you betcha! I like kicking the newsgroup punchclown. You're as predictable as the sunrise, and never fail to dissapoint.

We can either continue to play "kick the clown" or we can attempt a rational discussion. But what starts out as a rational discussion usually degrades to "kick the clown" fairly quickly. Let me know when you're tired of the bruises.

>
>

Because they are fabrications in your own mind. If it were as easy as
you say to be "heard on the toilet bowl" with legal power, then why do
all the power jockeys run so much power? Do they like paying the
electric bill? Would my 3 cylinder Metro stand a chance at beating a
Corvette in a drag race?

> Concerning your statements about your alleged "background",

You don't need to be schooled in music/amps/, or sound to understand the
analogy. It's a simple comparison of the effects of ambient noise on
your ability to have a conversation.

Simple to most people anyway. You are another story altogether.

No it wouldn't! I'm sure some of you can remember back to the 70's when power was a lot harder to come by yet the noise levels were still high. It has more to do with atmospheric conditions than anything else. If the conditions are not there no amount of power is going to get you to where you are trying to go.If conditions are prime, 4 watts will drop you in on any part of the world but this situation is not all too frequent.
Additional power will get you out better locally, it can also help when skip conditions are marginal.

leland, by you having one already you've displayed the desire to be a "ham". myself having already mastered the code and memorizing the radio shack theory books years ago just for the hell of it has shown a lack of desire to become one but i will tell you this leland c scott if i was going to be a ham no way in this world would i settle for lowest man on the totum pole and not taken seriously by my fellow hams even if VHF is the place i was happiest.<<

He doesn't have a choice, Tim. Between filing losing petitions to the FCC and losing access to his newsgroups he has no time to learn code. He also stated he was upgrading last summer, then the NCI sig appeared after he became frustrated.

Nido Qubein
You may judge Hams by their license class, that's your fault. Most Hams could care less.
--
Leland C. Scott
KC8LDO<<

You aren't most hams, you're the rotten exception....most hams don't even consider you representative of hams....people like you and Sparky keep mentioning the license, not Tim. It is generally regarded and accepted that those continually seeking recognition and validity of their own actions have an incredibly low level of self-esteem.
You are the one comparing it to those that you feel may be unlicensed, attempting to present it as an accomplishment, which it probably was for you, even without the code, but it means squat to the rest of us, and that failure to impress has always upset you a great deal. Tell ya' what, Lelnad, since an acknowledgement apparently means so much to you based on your continual sniffing of cbers hind ends, you upgrade like you claimed you would last summer and we'll throw you a nod of acknowledgement and then you won't have to constantly beg for it all the time.

>Between the two of you there is not a lot to choose from but Leland is
at least a more honest soul.
Dick NØBK<<

All his lost newsgroup access sites must have thought so also.

Mentioning of the FCC, I just confirmed that the old "contact addy" is
no longer good enough. Call 'ol Riley and leave a message asking for
confirmation and you will see what I am getting at...you hammies that
don't reside at the addy you provided the FCC are in violation of rules,
or federal law as the kennel club would have you believe. Riley has
absolutley CLARIFIED the contact addy MUST be the addy of the station
licensee unless otherwise noted.

>Are you sure? I don't think anyone really is.<<

Translation: "I don't know, so neither can anyone else."

> There are no absolutes when it comes to band conditions. But you'd have to be a fool to not acknowlege that the level of noise would be significantly lower if the level of RF power were kept at the legal levels. How much of a difference would that make? I don't know, but I am sure that whatever the level was, it would be better than what it is right now.<<

That is a far cry from your original claim that amps are the main cause of noise on the cb band. Proceed with failed analogy:

>Like I said before, I was around during the past 3 skip cycles, and I saw first hand what the noise levels were, and despite the fact the cycle 21 occured at a time when the CB fad was at its peak popularity in 1978, the daily noise level was nowhere close to what I have witnessed during this cycle.
Sunspot data has proven<<

Your interpretations are not proof, please do not attempt to pass them off as such. Most are keenly aware of the true origin of the official record keeper's data. It is apparent you are not, and have attempted to speak on a subject you have not a clue of comprehending.

>that this cycle is no stronger (and in fact is actually less) than previous cycles, so it's not the degree of ionospheric propagation that has increased the noise. So what's left? The only reasonable conclusion<<

You went from first calling it a "fact" to now casually referring to it as a "reasonable conclusion". 'Nuff said.

> is that there are either more total people on, or that the people that are on are operating with an average power level that is much greater than what was typical in 1978.<<

"Translation: These are the only two scenarios I could come up with, so it must be one of them."

From: twistedhed@webtv.net
Message-ID: <9217-3CD2AC85-311@storefull-2311.public.lawson.webtv.net>
Source record: 122957

>I've been learning that lately. No matter how many points of logic, rational thoughts, and even factual knowlege I may present, you still stick by your irrational diatribe.<<

So you now share with us your misapplied definition of a bigot now includes anyone you label "irrational"? Calling names indicates a presence of "irrationality", since it was introduced by yourself, once again, your problems are all self-manifested.

A bigot permits
their hatred for all who speak differently or have a different skin color or don't conform to a certain point of view, to obscure any sense of morality that previously may have existed.
Which includes the selective and reckless disregard for existing laws.
Reason does not work with bigots.

>Tell me about it. I've been trying, but you just don't get it.<<

The problem lays with the people who raised you and their teaching that calling names and making insults constitute "reason." To which parent do you thank for this attribute?

The only effective weapon against bigots is age

>Hopefully. Most wet behind the ears, 20 somethings, who THINK they know all the answers, usually learn through experience, and gain a wisdom that can only be achieved through age. I'm hoping this will happen to you in the next 20 years.<<

You shouldn't concern yourself with nameless, faceless, people and their lives. It shows you have too much time on your hands and no productive means to occupy it.

Whether the hatred is for an entire culture or in your case, a select group of nameless, faceless people

>Like those hams you constantly unload on, for reminding you that they can legally do what you can only dream about, have and break the law to accomplish?<<

If by your term of "unload" you mean a retort to a flame by one such as yourself who is always seeking jusification, you are correct.

constant belittling and personal off-topic attacks are simply the direct result of your inability to communicate effectively or properly and a direct reflection on the people who reared such.

>An accurate self-diagnosis.<<

There exist no posts of me ever attacking, flaming, or calling names to anyone that didn't come at me first and you are quite aware of this. You can't say the same, as you are quite a trouble-maker if given half a chance.

>I've always felt that if your father had smacked you upside the head a little more when you were a child, you wouldn't have such a disrespect for society and the laws that govern it. <<

I don;t have disrespect for society nor the laws that govern it, only gibbons not unlike yourself.

This time, even the losers that drink out of the same dog bowl you do...

>A prime example of your belittling and personal off-topic attacks.<<

Don't like it when the insults are returned? Try making a post without them.

...didn't come to your aid..they can't stop laughing at your incompetence.

>They probably are laughing. Laughing at you for once again being the newsgroup punch clown. And shaking their heads at me for not giving up on you long ago.<<

You were never in a position to give up, as you initiated the dialogue and resorted to attacks when you became frustrated.

> I admit, it's a weakness of mine. I like tough cases. But you do take the cake, and I not sure you can be helped.<<

Good thing I place such a great , intrinsic value on your opinions. The item of folly here, is the notion that you apparently fancy yourself in a postion to "help" another. You don;t even have the most basic life skills down yet, and you insinuate an ability to "help" another..interesting....who was the last person that turned to you for your "help" from the board?

THE definitive source is the observatory and people like you that can't comprehend their data go to hammie sites with interpretations that are dumbed down versions of what was attained from the source. Even NASA knows this.

>Really? So what you're saying is that the sunspot data that's available on all the ham sites are wrong, and only YOU, the mighty twistedhead, has the "real deal"?<

It's twistedH-E-D. Reread it.
The definitive source is the observatory. Any other source is suspect. NASA uses their data on a daily basis. I can't say about the hammie sites, but if the one you set forth is indicative, it appears the hammies have their own set of myths they adhere to.

>If that's not a pompous, arrogant attitude, I don't know what is.<<

Your negative disposition is a shining example.

>Seriously, you need some psychiatric help.<<

You have shared your lack of secondary education with us, yet you fancy yourself on par with a Doctorial. Narcissism.

-
>You have many issues, that cloud your objectivity,<<

Objectivity begins by not insulting one you may disagree with. Do try to learn the definition of a word before attempting to apply it.

>and blind you to the facts.<<

Your opinions, as it has been shown and you offered forth, are in the minority and are not facts. You have offered nothing but your emotional responses to topics.

> I've known people that are narcissistic and self-absorbed, but that doesn't start to scratch the surfice of what's running around in that little head of yours.<<

You would be a much happier lid if you tried not to concern and obsess yourself with those you admire so.

>I really must let this go, as it is clear now that nothing will ever be settled.<<

Yes, evidenced by your inability to make a single post in this thread without making insults. But I will be willing to debate or discuss anything you choose when you grow up and learn how to communicate effectively like an adult, without insult.

>You will argue your wierd "CB science" theories in the face of all sorts of evidence to the contrary.<<

I never put any ideas forward concerning "cb science", and whatever definition you choose to apply it.

>Evidence that you dismiss without any supporting facts of your own (like this mysterious sunspot database that somehow is at odds with everyone else).
Dave
"Sandbagger"<<

Your link was not evidence, "Hall". Do yourself a favor, do a quick search on the observatory. It is painfully aware to all but you, you haven;t the slightest idea what you are speaking of.

Assuming the radio was the only component changed in the system i still
would not trust the factory field strength meter or circuitry.
If the Schottky diodes were blown the receive would only be more more
sensitive and the receiver would suffer from front-end overload, you would
have to turn the receive gain down to clarify a close or strong signal.
I would be prone to check the IF amplifier first and then the alignment on
the receive side.
Also make sure the coax has low attenuation and good shielding .

>If you oppose these values then YOU are the sociopath.<<

Wow, your level of intolerance runs deep. If one opposes your values, they must be a sociopath...how droll..(chuckle).

>Truth hurts doesn't it?<<

When you put some forward, we can then decide. Your admission of one of opposing values makes one a sociopath can only hurt yourself.

Whatever...your lie about "actions confirming it" are just more BS from your bile duct of waste.....you called many names and hurled many insults based merely on discussion content.

>Prove it. find the post and print it.<<

.what you hear on your radio
has not a thing to do with this forum and your conduct unbecoming and is no excuse for your blatant hypocrisy

>You have it backwards. Th CB radio does not support this newsgroup. This newsgroup supports discussion about CB radio, and the activities that occur THERE. So what happens ON THE RADIO is far more relevant then the wacked out opinions of a few socially challenged newsgroup geeks, of which you seem to be the top contender for king.<<

I never said cb supports anything, YOU were the one that did the quick back pedal with a failed excuse that what you hear on the radio somehow justifies your insults and namecalling in here...you were the one that brought it up.

.it was you that cried 2 wrongs
don't make a right.............you rail against those that you perceive as breaking some certain legal laws based on what you hear them say on radio and their potty mouths and behavior...BUT you come on here and act like those thatyou cry, bitch and moan about.

>Really? When have I ever exhibited behavior similar to the rude, inconsiderate people on the CB band. <<

Take your pick of your Insults meant to belittle and namecalling in each of your posts in this thread.

>If you don't like my frank, no nonsense responses, and occasional retaliatory sarcasm, that's your problem. But I'd never attempt to squelch rational discussion. Something you don't seem to be able to do.<<

The attempted squelching of discussion comes exclusively from your corner. Again, the fact that you consider repeated name calling and insults "rational" discussion is more a reflection on your upbringing than anything.

.....you have reduced
yourself to the level of that which you purport to care about, showing you place a greater value on what is heard on radio than what you read in usenet

>Well DUH! This is a forum about CB RADIO, not a forum about the lives of computer geeks that just want to talk about CB radio, but never actually participate. I care about what happens ON THE RADIO, I am concerned when THE RADIO has become something that it should not be. I would like THE RADIO to return to a more civilized state. I share these concerns and swap other ideas with other people who are also RADIO enthusiests, via the USENET, but USENET is not the be-all and end-all of existance, and certainly is not always representative of what CB radio is all about.<<

so you drop any morality that may apply to your behavior on usenet

>Such as? Name a time where I've done anything "immoral" on USENET.<<

"Immoral" is a subjective term. "Rude" or "callous" or "judgemental" or even intentional "ignorance" fits better. It's your behavior and insultive nature.

>I did not name any specific person or persons who post here.<<

But you did.

>Name it. Post the thread. Put your money where your mouth is or shut it. <<

You were saying about "squelching".....

>If not, anything you say is just unsubstantiated nonesense.<<

Like your shared knowledge concerning DX, amps, and mean sunspots.

    You already proved it, quite effectively..

>How? Other than you, in the course of a "discussion", who have I mentioned by name and accused of being criminal? <<

Then of course, we have your admitted taunting.........

>Only to you, because you're an idiot. One that I am slowly tiring of. <<

Only because you are so s-l-o-w. Most would have realized they were being forced to self-ridicule long before you did.

>I'm sure that there are those who wonder why I waste my time with you.<<

And I am certain your concern of what they think is priority one, otherwise you wouldn't have mentioned it :).

>You seem to blur the line between opinion and fact quite frequently. Breaking the law makes you a criminal That is a fact.<<

Once again, you have no clue who breaks the law on here. Also, not being able to converse without letting emotions dictate your weak responses and redundant adolescent name calling is strongly indicative of a low intelligence level, unarticulation, no secondary education, and several other disabilities. This is also a fact.
>Trying to convince yourself that you have some god-given right to selectively ignore laws that you personally don't agree with, doesn't change those facts, no matter how long and hard you protest.<<

The same can be said for your childish mannerisms and the way you pigeon-hole any that disagree with your personal feelings on morality.

>And you'd be wrong. Try telling it to the judge,<<

And therein is your problem...you are not the judge, yet you continue to pass sentence based on discussion and seek justification from me. I owe you nothing.

>when you're ever caught breaking the law. Tell him you have a god-given right to selectively ignore laws that you don't agree with, and see what he says.<<

"God-given" was your term.

I have as much right to break the law as you do to enforce it.

>responsible for the noise level on the legal 40, and since the effects of the sunspots are not any different on the freeband, then it is on the legal 40, then the noise level should be the same on both. But the fact is that the noise level is significantly less on the freeband. This supports my conjecture that the noise level is propagated by the sunspots, but is created by the volume of people hetrodyning together, and further exacerbated by people running large amounts of power.<<

And is a far cry from your original claim that amps solely are responsible for noise on the freqs.

>I never made that claim. I simply said that amps were responsible for the INCREASED noise level over what I experienced in 1978, when most people still ran legal or less than 150 watts.<<

That's not what you typed at the beginning of this thread, but your attempt at distancing yourself from your original remarks is good enough.

>It's pretty much a given among serious ham HF DXers, that stateside contacts are not considered DX. While this is indeed an "opinion", it is one that is shared by a multitude of people that live and breathe for this stuff.<<

Well, it doesn't apply here, as you are ina cb forum and state to state is considered DX by cbers.

>I also know a bunch of hardcore freebanders who share this view. They have much in common with hams.<<

Many ARE hams.

>I'm surprised that you didn't know this, as much as you want to be a ham, even if you can't master the simple tests.<<

I don't live and breathe the stuff as you say you do.

>Pay attention, I never said *I* live and brethe the stuff. I have far too little time on my hands to play radio 24/7. I'm more concerned with raising my daughter properly so that she doesn't embrace some wacked out anti-social mindset, like you have.<<

I can tell you for certain, your daughter will marry someone you detest as a way to get back at you if you raise her with the same shallow values you were taught. You will remember this advice, and me, for the rest of your life. Think of me and smile when your daughter comes home pregnant from a card-carrying member of the ACLU who makes your IQ the novelty of the moment.

it's a hobby for
me......but what can we expect from someone who claimed they were upgrading since last summer?

>What? When have I ever made a claim to be upgrading? You can't even keep your opponents straight<<

When you were posting under a different name.....

Oh, you mean from your nocode perspective? Well, damn why didn't you say so in the first place instead of reducing yourself to what you have?

>Pay attention. I passed my first ham test in 1981. <<

And the failure to impress anyone here upsets you greatly..LMFAO!

>It was not meant to "impress you", only to illustate that your insinuation that I am a "no-coder" is flawed, due to my obtaining my license long before there was a no-code license. But once again, you missed the point.<<

But YOU used it in your flawed example, regardless of your personal opinions or emotions of the issue.

>Flawed only in your mind. The comparison was nonetheless valid.<<

You have failed to make any valid analogy yet to date.

>You are far from qualified to make that judgement.<<

If you are referring to amps, no they wouldn't.

>But the conductor is not the source of the noise, the people hetrodyning are.<<

It's not caused by the amps alone and ridding of all amps would not make your noise go away.

>No, it wouldn't but it would REDUCE it significantly.<<

no matter which name you chose to post under.
Now who's making wild accusations?<<

Really? Have you ever posted under any other name to this group?

>Hmm.... let's see. As far back as 1996, I have used this same account and my name is my name. Before that I was "squatting" on an account from a local college and used the "Sandbagger" name. Other than that, I have not used any other name. I know you think that there is only one person out there that has a problem with you, and that they keep changing their usernames. But there are far more people, than you can admit to, who find your perspective warped and a little scary.<<

That is indicative of problems itself. When you allude there is a covert group that finds my posts "scary",,,you have been spacing way too much. Most aren;t "scared" by mere words, but we know how an injection of truth can be frightening to you, maybe even dangerous to your psyche <g>!

....the bottom line is,,,if their were no propagation, no good DX conditions, a million people wouldn't be heard no matter what they were running......

True

    But<<

No "buts". This blows your original amp theory all to hell.

How?

>Another wild accusation?<<

Ok, ok, let's focus on my first accusation...have you ever posted under any other name to this group?

>Already answered. Which I'm sure you'll accuse me of lieing about.<<

I don;t have to accuse you of lying, you were caught several times. Accusations at this ppoint would be redundant, like you.

>You just love to engage in the same behavioral traits that you accuse me of. There's a word for that; Hypocrite. <<

And I see it's finally becoming more familiar to you. I never accused you of anything prior to your attacks and admitted taunting.

>I don't "attack". I mearly retaliate. You make sly innuendos and insinuations about my credibility. I don't play that game. I call a

spade a spade, and it's clear to me now that you have severe psychological issues, beginning with a highly over-inflated opinion of yourself.<<

And your admitted over-concern with other's self opinions show an obessive compulsive disorder.

>As far as the "taunting", you betcha! I like kicking the newsgroup punchclown. You're as predictable as the sunrise, and never fail to dissapoint.<<

Yes, you are neither novel nor original to your small but angry group. The one trait shared by you troublemakers is an unusually low self-esteem. In order for underlings to feel worthy of themselves, you all must insult others in order to compensate for your own shortcomings and feelings of no self-worth and low self-esteem.

>We can either continue to play "kick the clown" or we can attempt a rational discussion.<<

Your learned teachings as a child that insults and calling names is part of a rational discussion is a trait you may choose not to pass on to your daughter, if you haven't already hurt her and damaged her psyche with those beliefs. Break the cycle now, if you are able.

> But what starts out as a rational discussion usually degrades to "kick the clown" fairly quickly.<<

Yes, all your posts "degrade" rather quickly. Not an astute observation, but a correct one. Glad to see you finally realize what the rest of our view of you appears as.

> Let me know when you're tired of the bruises.<<

I'd rather let you think you accomplished something for the time being.

No one ever taught you about location, location, location. You forget my location...salt water, salt water, and more salt water at my front door.....talking on the boat with an Antron at 12 watts SSB gets me worldwide more often than not. Double that gets me on the bowl (only from the water) and I have even talked barefoot there a few times. Let's see...it was only a few weeks ago I hit Mr. Blue way down under on AM........

>I seriously doubt that your groundplane, as good as it is, is enough to put your barefoot signal on the same level as the multi-kilowatt stations on the "toilet bowl".<<

And you continue to share your incredible cb wisdom and insight, as always.....

>I don't have "CB wisdom". I have the proper engineering RF background.<<

Then you must feel pretty ignorant making all those incorrect statements about how I can't get worldwide barefoot, or be heard on the bowl with low wattage.

>Because they are fabrications in your own mind. If it were as easy as you say to be "heard on the toilet bowl" with legal power, then why do all the power jockeys run so much power?<<

Never said it was easy. Your term, not mine.

> Do they like paying the electric bill? Would my 3 cylinder Metro stand a chance at beating a Corvette in a drag race?<<

Um, when you come back to relevancy...let me know...

Concerning your statements about your alleged "background", I understand what you think mentioning it does for you, but you simply are achieveing the opposite. Instead of blindly saying "It doesn't happen" you would be better to learn a bit more about cb propagation,

>I learned all there is to learn about CB 30 years ago. I was talking DX when you were still suckling on mommy.<<

Again, you err, but this is what happens when fools rush where angels fear to tread. I'm in my twilight..my children are grown with families of their own.....you have a small child, so a logical assumption would be that you are under 40,,,or a mature fool.....yet another would be you never finsihed high school, but to remain relevant,.. to paraphrase you, it is you that is "green" by comparison.

>If you and another person are seated at opposite ends in a large room, you can have a conversation, without really raising your voice. Now put about 100 people into the same room, all jabbering among themselves, and try to have that same conversation. Do you think it will be just as easy? Now put in a rock band with large amplifiers. Can you still have that conversation? The room(propagation) is still the same, but the ambient noise (Users of the frequency) have increased to the point that you can no longer override the background noise.

If you can't comprehend that rather simple example, what does that say about you?<

There is one who is superbly schooled in music/amps/sound production among us, and he would not hesitate to validate your comparison if he were able, but the fact remains they can not even be remotely compared.

>You don't need to be schooled in music/amps/, or sound to understand the analogy.<<

But if you were, youwould understand there IS no analogy.

> It's a simple comparison of the effects of ambient noise on your ability to have a conversation.<<

If it were that simple, you wouldn't have chosen one that isn't comparable.

>Simple to most people anyway. You are another story altogether.
Dave
"Sandbagger"<<

Considering the source, I take it as an extreme compliment.

You need to confine yourself to talking about things that you have direct
personal experience with, like Tim, such as "jock straps" and QSLing with
"saucer men" on the freeband. Anything else makes you look foolish.

You may want to look out for one in the flea market area. My brother picked up a nice 70 amp regulated supply like that. The power supply was originally used for an old Alan Bradley PLC-2 or PLC-3 logic controller. With a bit of rework he had a nice station power supply for several rigs and his high power 6m amp.

Why would hams - who have oodles of spectrum overflowing with DX aplenty - risk their licenses to muck around in the chaos and QRM of the "freeband"?

The only conceivable answer would be that their licenses do not permit them HF privileges.

Your 2 week suspension is finally over and the first thing you do is
show the group your tattoo of me
>Hey it's easy to mistake a dog's, a female dog at that, hind end for a
tattoo of your likeness Twisted.<<

You have a tattoo of a dog's ass on yourself? Somehow, that doesn't
surprise me, neither does the corelation you make between nameless,
faceless characters on usenet and your image of what they should be.

>Get any more QSL cards lately from those "saucer men" on the freeband?

Let's take a look at what you complain about

<Let's see...

<...we have Dave & Debby sending emails to innocent posters telling
them they are going to hell because they are violating God's will by
interracial dating.>

OK, so that poor woman got some e-mail from him, what does that
have to do with you and that George fellow trolling the Newsgroup?
If memory serves me correct, didn't you forward out an infected e-mail
to a bunch of people a month or so back?

<...we got a whole bunch of CB outlaws, most notably TRA1N, willfully
breaking federal law by advertising CB amps for sale in the NG and
bragging about doing 150 mph on the Jersey Turnpike.>

So you are now an employee of the FCC? Is that why you are here?
If he is voilating Federal law, then let the proper people do their job.
So he was doing 150, are you now a state trooper as well?

<...we have the inimitable Twistedhed, who gleefully brags about
mistreating his pets and fantasizes about shooting trespassers.>

Again, what does that have to do with CB?

<...we have SD Jones who continually posts hints of physically harming
people he doesn't like.>

Hints or out right threats? If he is threating someone, turn them into
the proper law, not some selfmade vigilante.

<...we got a bunch of bubbleheads who try to squelch all talk of
legalities, yet cry "free speech" if you mention they shouldn't use
the NG as a marketplace to advertise illegal goods.>

Newsgroups in themselves are a form of free speech, so you trying
to squelch out thier right to dicuss amps, free band and such makes
you worse than them.

<Yet you see old Aaron and George as the big problem here? What kind of
a mother are you?>

Yes I do see that and it seems a lot of other do too. As for
what kind of mother I am, that's you style, attack the person
when confronted with the facts.

<"Linda", if I were you, I'd take a leeeeetle closer look at this NG.>

I have Aaron, but the closer I look the more distorted your opinion becomes.

<-Aaron->

Linda McGrath

Hello Sparky

<Gee, Linda, does your brain shut off when you read SD Jones posts?>

Nope, not at all

<Are you making your opinions after killfiling the foul mouths of Train and Chuckie?>

I'm not sure where you going here Sparky?
Is it because Aaron & George stir up the Bee hive and they start buzzing I should condem the bee's?

< And since you are proud to be a mother of three, do you want them living in a place where lawlessness is openly encouraged?>

You are joking right? really your joking?
If you think that because someone use's an amp that they are going to kill, rob, do drugs than my friend you need to get a grip on reality. Thats was the same thinking
that got the US in trouble in Vietnam
(Domino theroy)

Maybe you need to lurk a bit longer.

Oh no thanks, this is to much fun pointing out thier problems.

you know, bert.....wasn't it karl marx who said that religion was
the opiat of the people? well you know what bert.....he was
wrong....he should have said that organized professional sports is the
opiat of the people...if we could get people in this country just as
excited about voting as they do about this sports crap, things might
actually change for the better.....i learned a long time ago , the
best way to deal with sports is live in one town , that doesn't have
sports and root for a team in another town, that way, you never have
to pay for anything for these rich bastards.....

>i'd say you first suggesting the participants of this news group which are >about 99.9% male

How do you know that, Tim? A lot of people here use an alias, do you have psychic powers or something?

> sitting around doing sexual things to themselfs would be >considered as you first bringing up fag type shit.

It's obvious that you have never read Masters and Johnson.

> i think the rest of the >world would too and thats why your now trying to backpeddle so fast from it.

I stand behind my parody, Tim. You are the one that's pushing the homosexuality issue, and you are desperately trying to push it on me.

>yeah perhaps i'm the only one that notices that you, aaron, and george all make >homo type remarks

Except for my recent remarks to you, when have I EVER suggested that anyone in this newsgroup even just -might- be homosexual, Tim? Never! And I wouldn't consider that my suspicions about you were unwarranted, since YOU brought up the subject and you are denying that fact with such intensity that "Me thinks thou doth protest too much".

> when it comes to the men cb'ers which totally dominate the cb >keydown scene. i know of NO women that actually key at the line competitive, i >dont think even foxy does so your idea that you may have not been talking about >men is bullshit.

Ok Tim, women never use amps, women never operate out-of-band, and women never participate in keydowns. Is that what you are trying to say?

>why wouldnt you know sparky? you spend hours a day on this newsgroup are you >saying all of the sudden you havent been paying attention all this time?

Hours a day? Let's see now, I have posted just over 700 times this year, and you have posted over 400 times in the same period. So if I am spending "hours" on the newsgroup so are you. Pot-kettle-black. But unlike you, Tim, I don't have the psychic ability to determine a person's gender just from a newsgroup post. You know as well as I do how hard some people will try to hide their true identities, and I don't have any problem with that, either. But just because I can't

confirm that Tim Nebout is your real name doesn't mean that I'm going
to draw the conclusion that you are anyone else. With the same token,
just because you can't fathom the idea that there are more than one
Frank Gillilands in Washington doesn't mean that I'm N7VCF. That would
be called "jumping to conclusions", and is a thought process reserved
for primitive minds that can't accept (or won't admit) the fact that
they simply don't know. But that doesn't apply to you, Tim, because
you have those psychic skills that you use to see just how I spend
every waking hour. I hereby concede to your extrasensory perceptions.

Dipshit.

>keyclown=keydowners=men oh yes its true sparks and you know it

You wish it.

>well i tell you what sparky i'll admit your right about that. i have a tendency
